representing the CDF and D0 collaborations

### ABSTRACT

The Tevatron Run-II program has been in progress since 2001, and the CDF and D0 experiments have been operational with upgraded detectors. Coupled with recent improvements in the Tevatron accelerator performance, the experiments have started producing important physics results and measurements. We report these measurements as well as prospects in the near future.

## Analysis of the results

## Data Analysis

# An international dimension

**CC-IN2P3 is part of a worldwide network of large computing centers for High Energy Physics**

- **Complex experiments**
  - Very large number of electronic channels
    - Large amounts of data
- **International collaborations**
  - Data distribution
  - Geographically distributed analysis
    - Leveraging wide area networks
- **Experiments are simulated too**
  - Complex modeling of detectors' responses
    - Large computing times and amounts of data

# LHC, a giant particle accelerator

LHC = Large Hadron Collider

Two proton beams  
circulating in  
opposite directions

Collisions in 4 zones

10 years to be build

Several thousands of  
physicists and  
engineers involved  
worldwide

Instrument Cost:  
~3 billions €

More than 9,000  
supraconductive  
magnets

# LHC: one tunnel and four huge detectors

# 15 petabytes of data

1 typical hard drive: 500 GB  
1 year of LHC production → 30,000 HDD

100 millions of SpecInt2000 are  
needed to process this data

Roughly 70,000 modern CPUs

Centralized data processing is not an option!

→ Agregating the available computing  
power of several computing centers is  
mandatory

## A needle...in a haystack

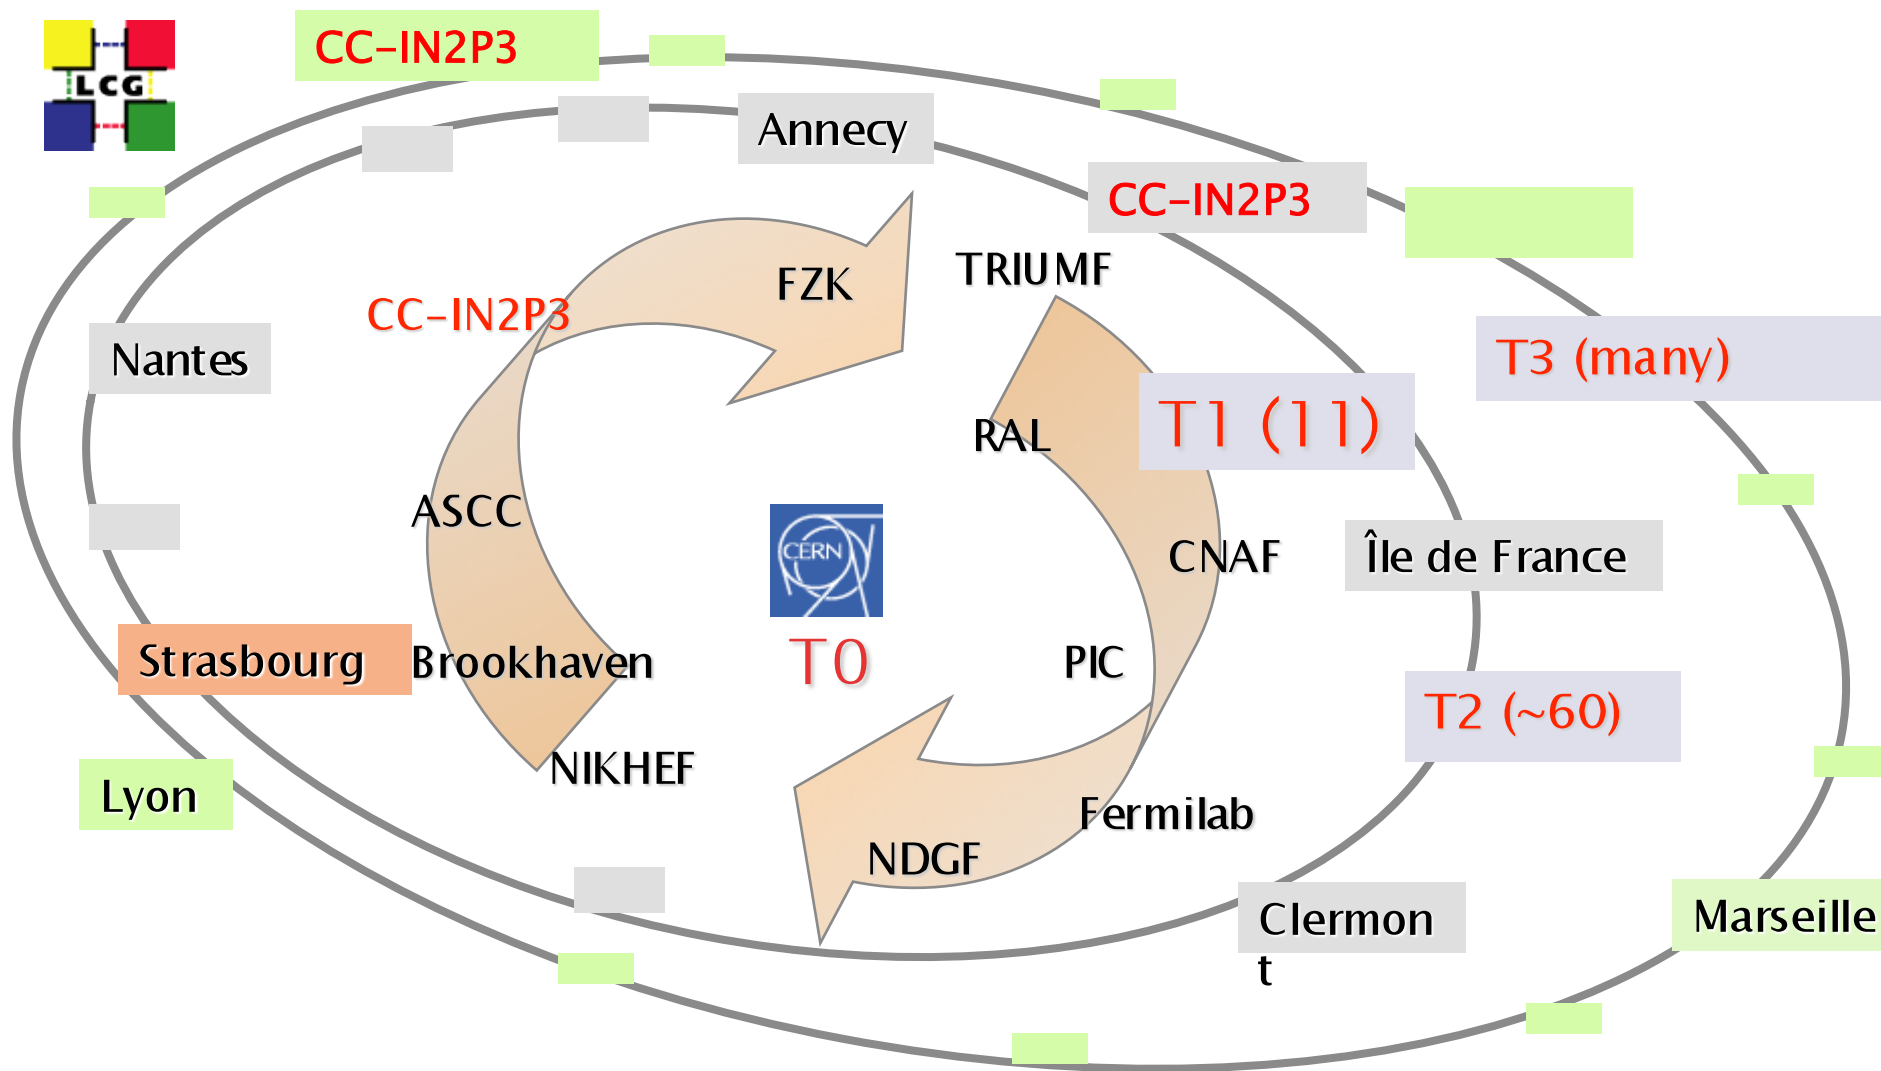

Part of physicists' work consists in looking at billions of collisions to find the few dozens that will unveil interesting phenomena

-> Higgs Boson discovery (July 2013)

# A specific grid infrastructure for LHC – the WLCG Project

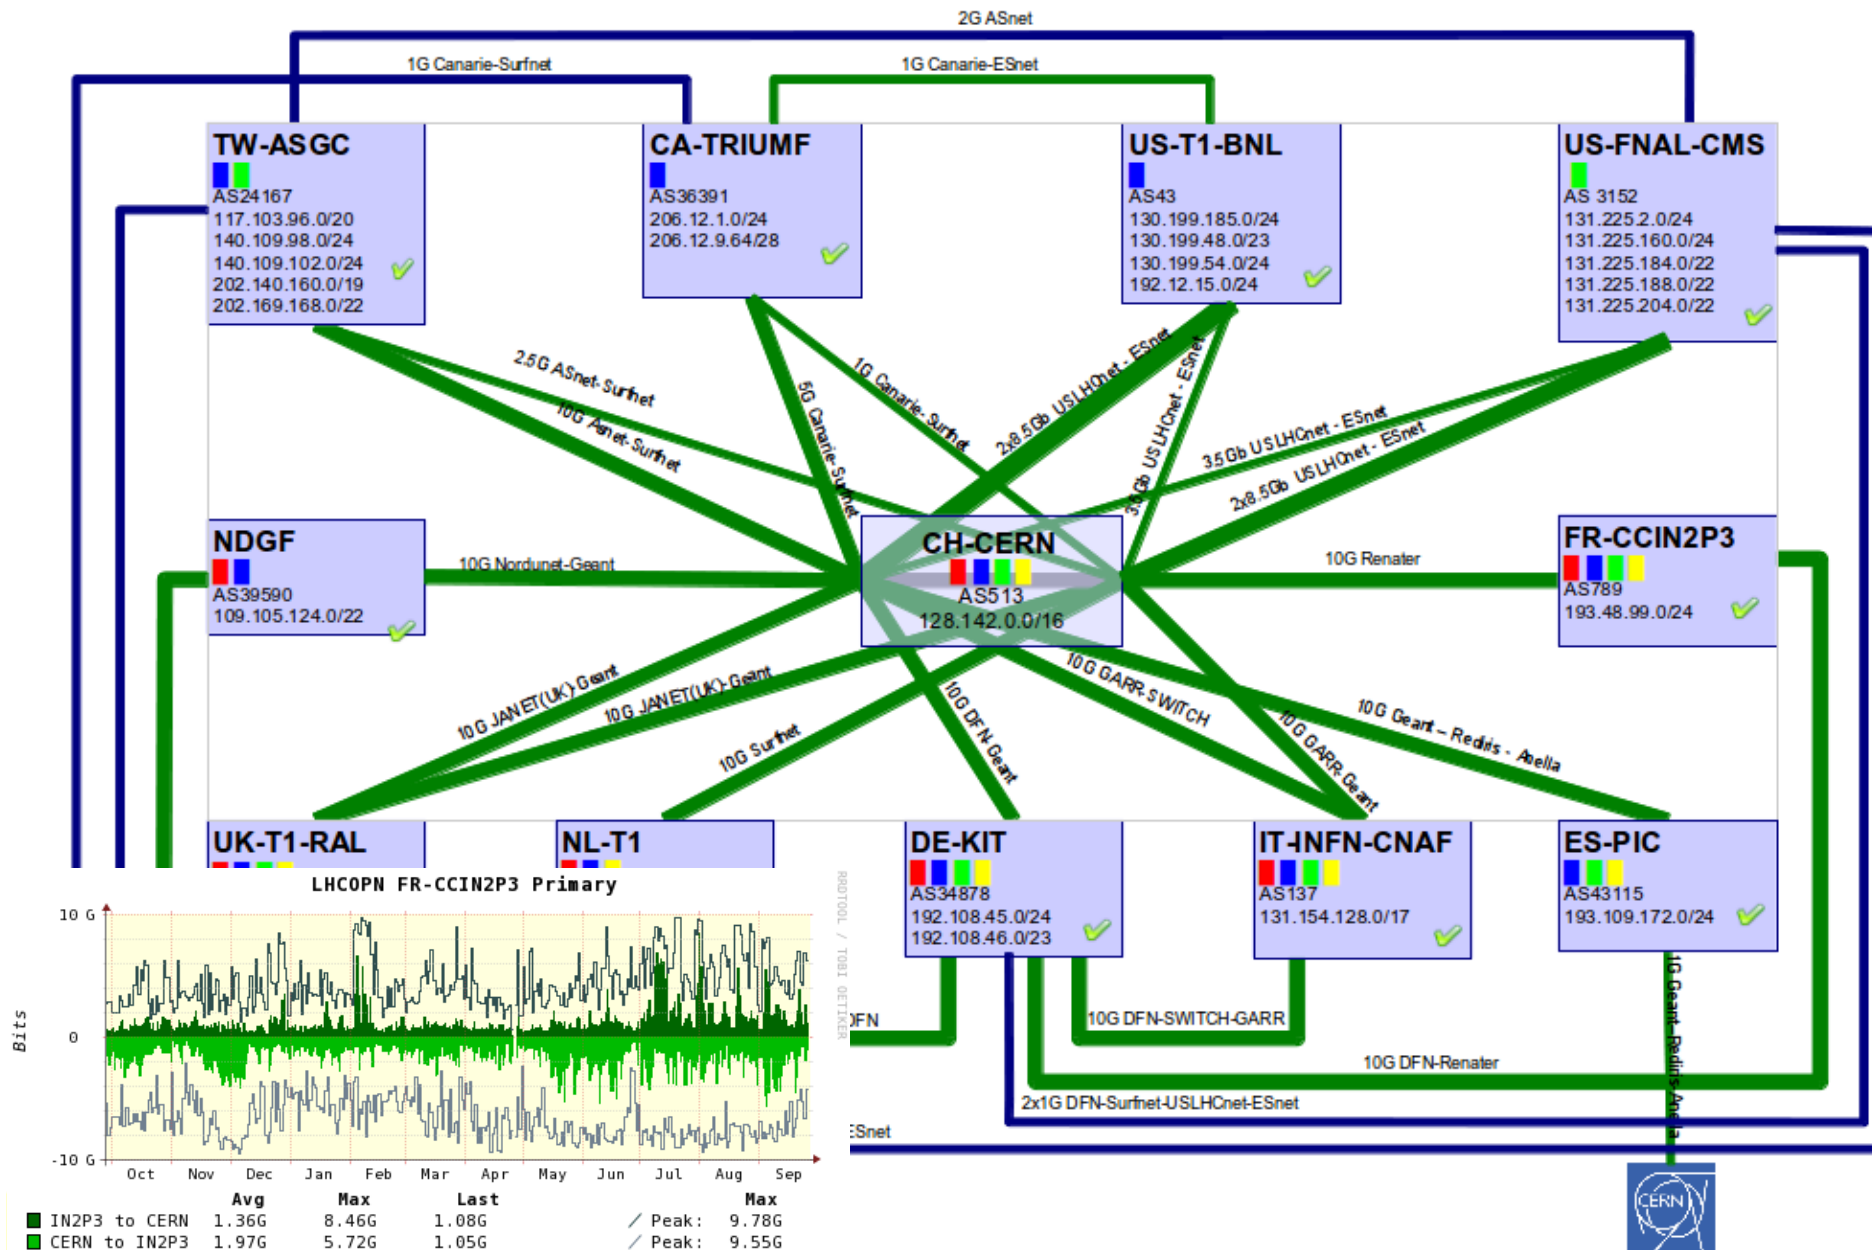

# Evolution of the computing model

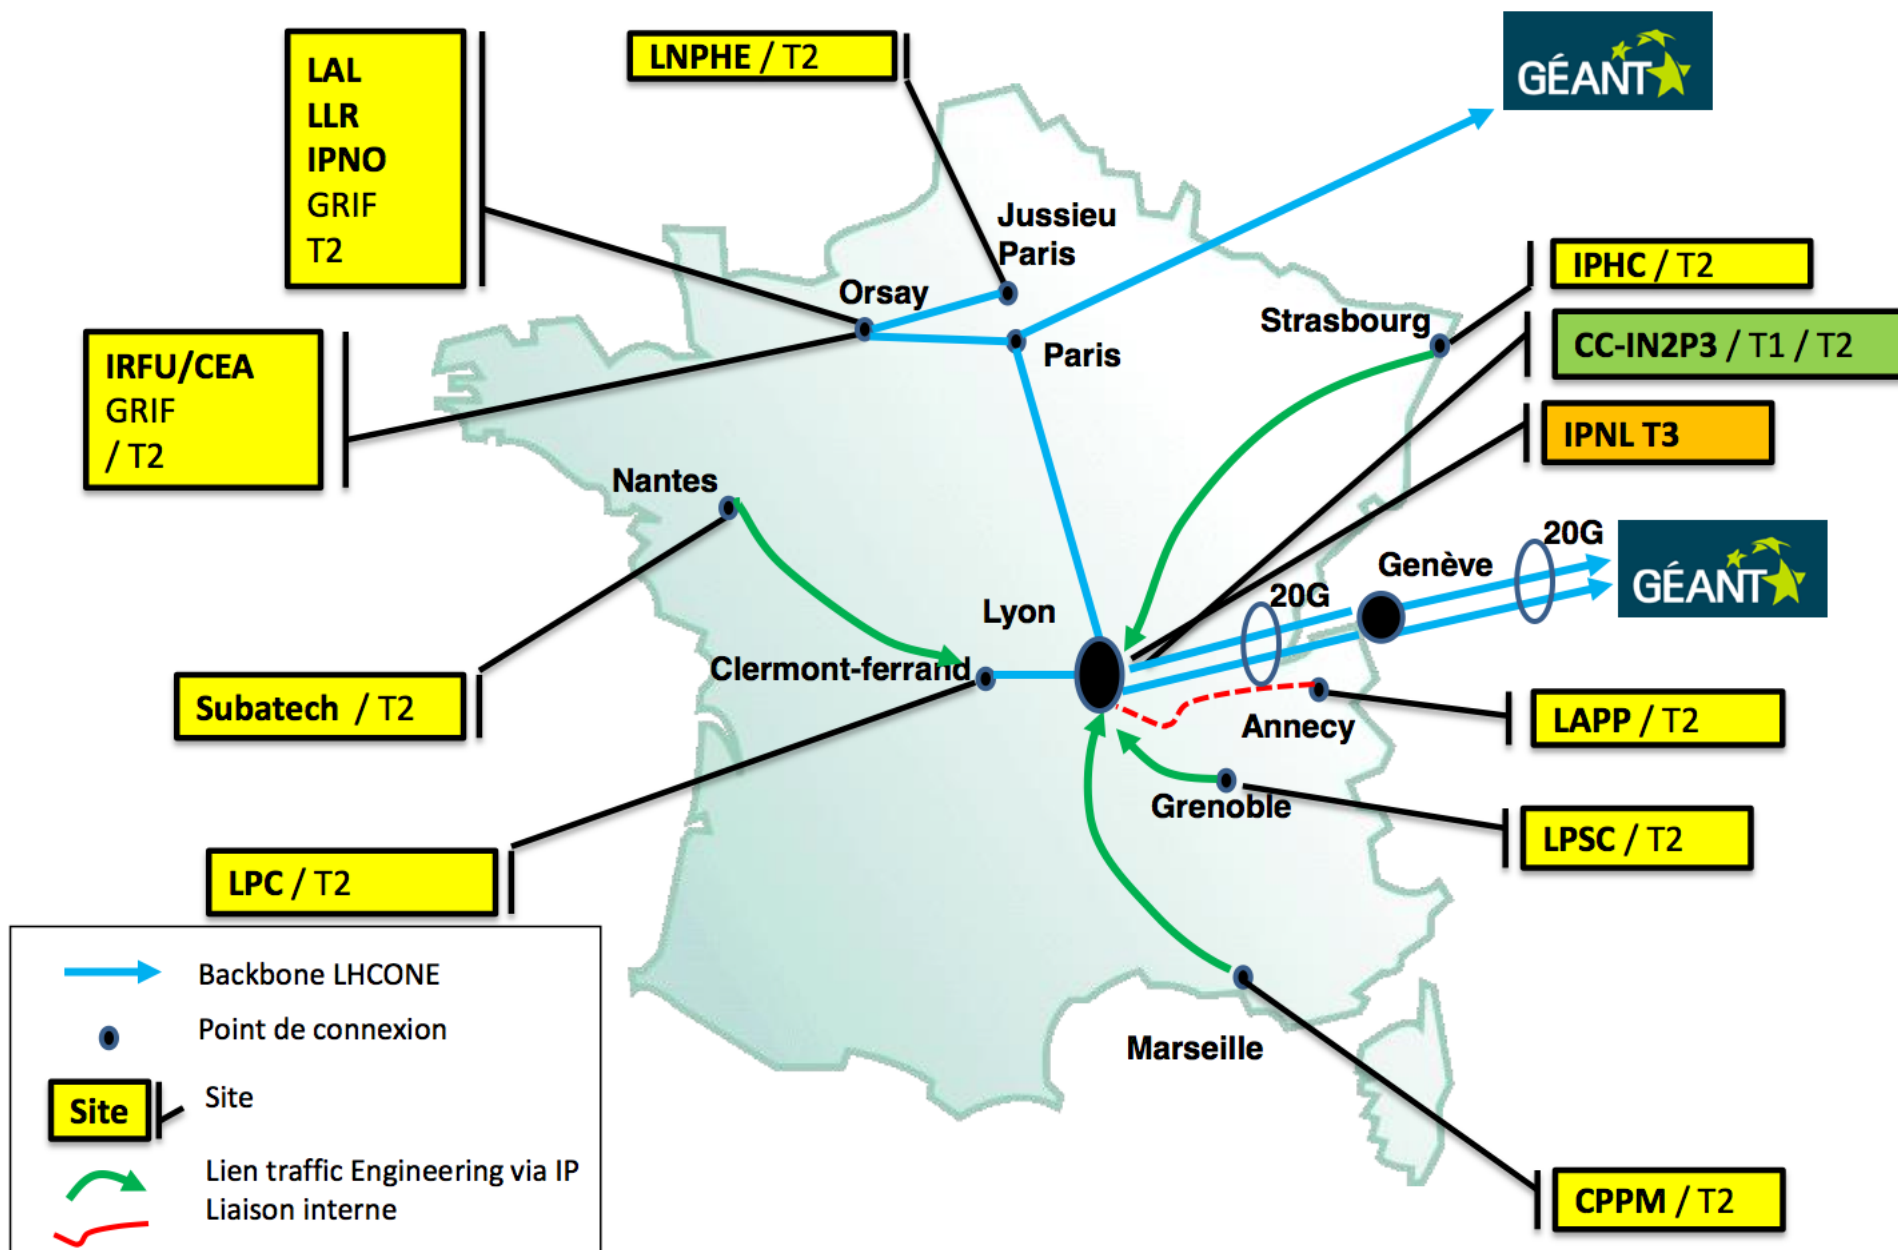

→ LHC Open Network Environment Project

# LHCOPN

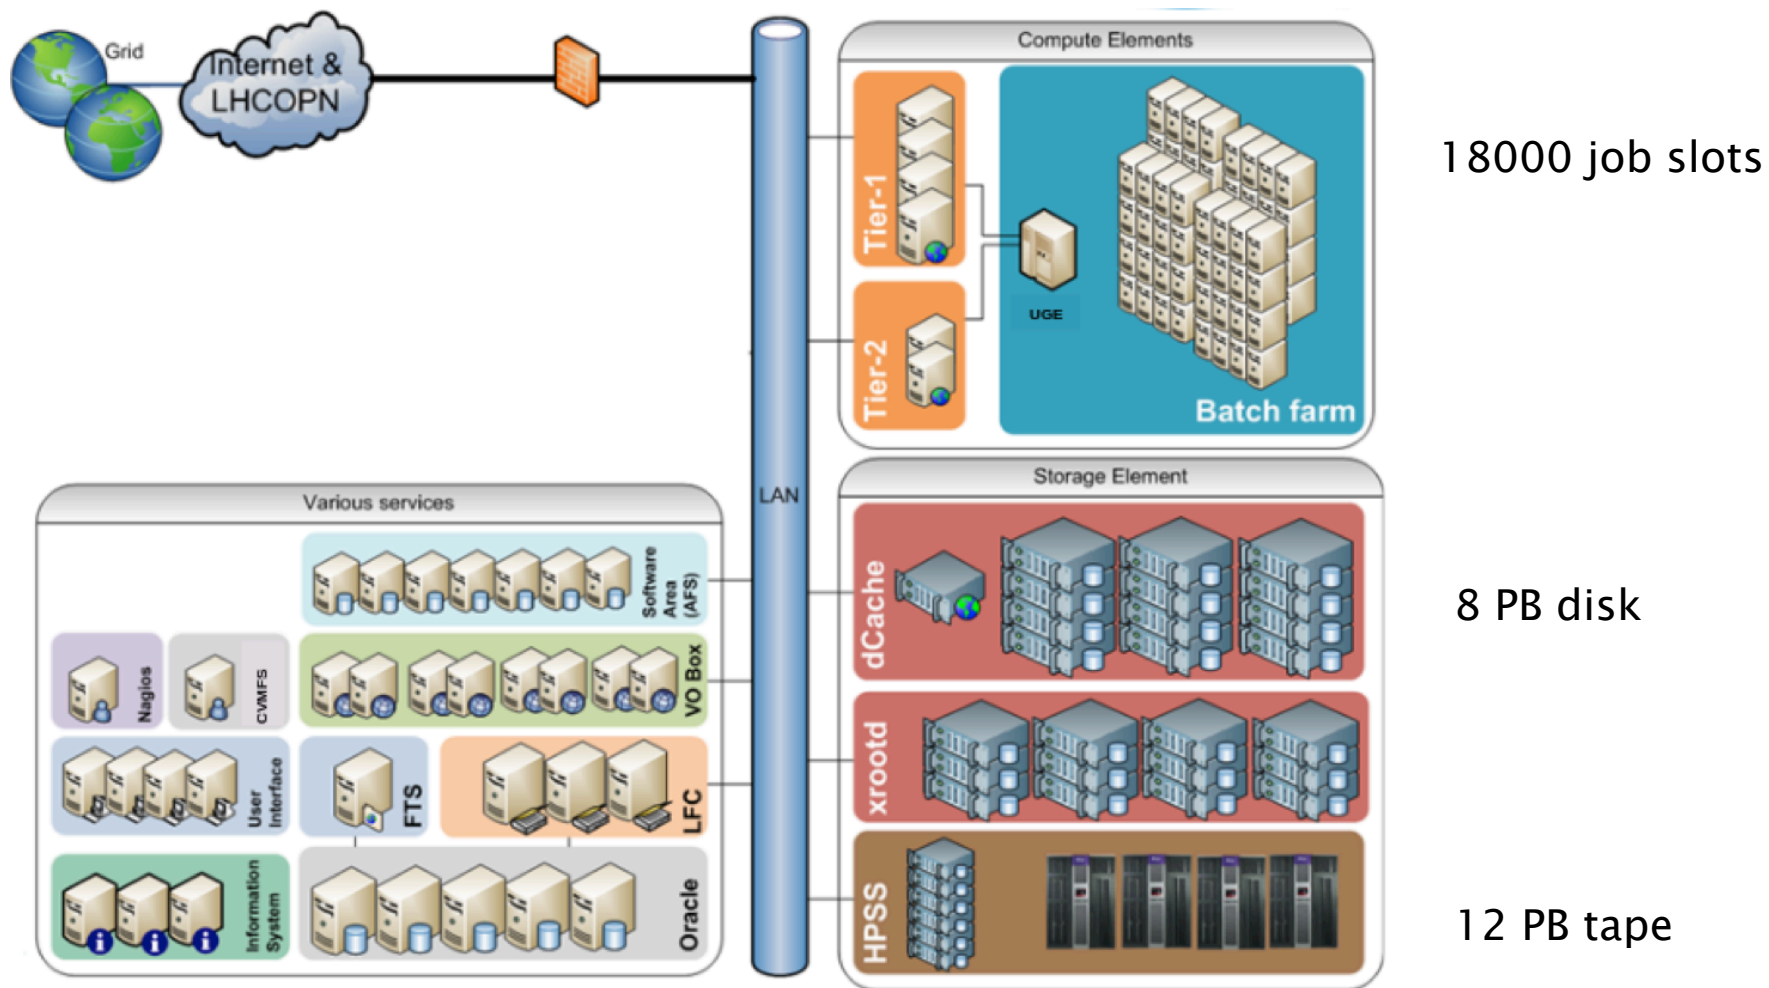

# LHCONE nov. 2013

# CC-IN2P3 resources for LCG

18000 job slots

8 PB disk

12 PB tape

# The Higgs field effect... on computing

Intense computing activity between May and July

Large recognition of the W-LCG role in the Higgs discovery

## Number of groups by scientific domain and activity in 2014

# Many astroparticle experiments at CC-IN2P3

## LSST

Whole dataset available at CC-IN2P3

50% of the processing by CC-IN2P3  
other 50% by NCSA

## EUCLID

CC-IN2P3 is the French Data Center for processing and data management

dark energy and dark matter

## CTA

CC-IN2P3 should play a key role in the CTA data processing

Gamma rays

## Interdisciplinary projects

- ▶ Opening to bio scientific field by participating as partners within national or international projects.

- ▶ 2 projects:

- eTRIKS: European project under the aegis of European Initiative IMI
  - BIOASTER: the only TRI (Technology Research Institutes) on health care and life science selected by the National Investments for the Future
- ▶ Both projects have in common:
    - Public-private partnership and co-investment
    - Important innovation component to build up new type of platform
    - Staff recruitment

## Storage at CC-IN2P3: disk

### Hardware

#### Direct Attached Storage servers (DAS):

- Dell servers (R720xd + MD1200)
- ~ **240** servers
- Capacity: **12 PBs**

#### Disk attached via SAS:

- Dell servers (R620 + MD3260)
- Capacity: **1.7 PBs**

#### Storage Area Network disk arrays (SAN):

- IBM V7000 and DCS3700, Pillar Axiom.
- Capacity: **240 TBs**

### Software

#### Parallel File System: GPFS (**1.9 PBs**)

#### File servers: xrootd, dCache (**10.6 PBs**)

- Used for High Energy Physics (LHC etc...)

#### Mass Storage System: HPSS (**600 TBs**)

- Used as a disk cache in front of the tapes.

#### Middlewares: SRM (none), iRODS (**648 TBs**)

#### Databases: mySQL, PostGres, Oracle (**57 TBs**)

## Storage at CC-IN2P3: tapes

### Hardware

4 Oracle/STK SL8500 librairies:

- **40,000** slots (T10K and LTO4)
- Max capacity: **320 PBs** (with T10KD tapes)
- **106** tape drives

1 IBM TS3500 library:

- **3500** slots (LTO6)

### Software

Mass Storage System: HPSS

- **24 PBs**
- Max traffic (from HPSS): **100 TBs / day**
- Interfaced with our disk services

Backup service: TSM (**1 PB**)

## Quality management

Quality manager appointed

Computer room manager appointed

19 people trained to ITIL standards

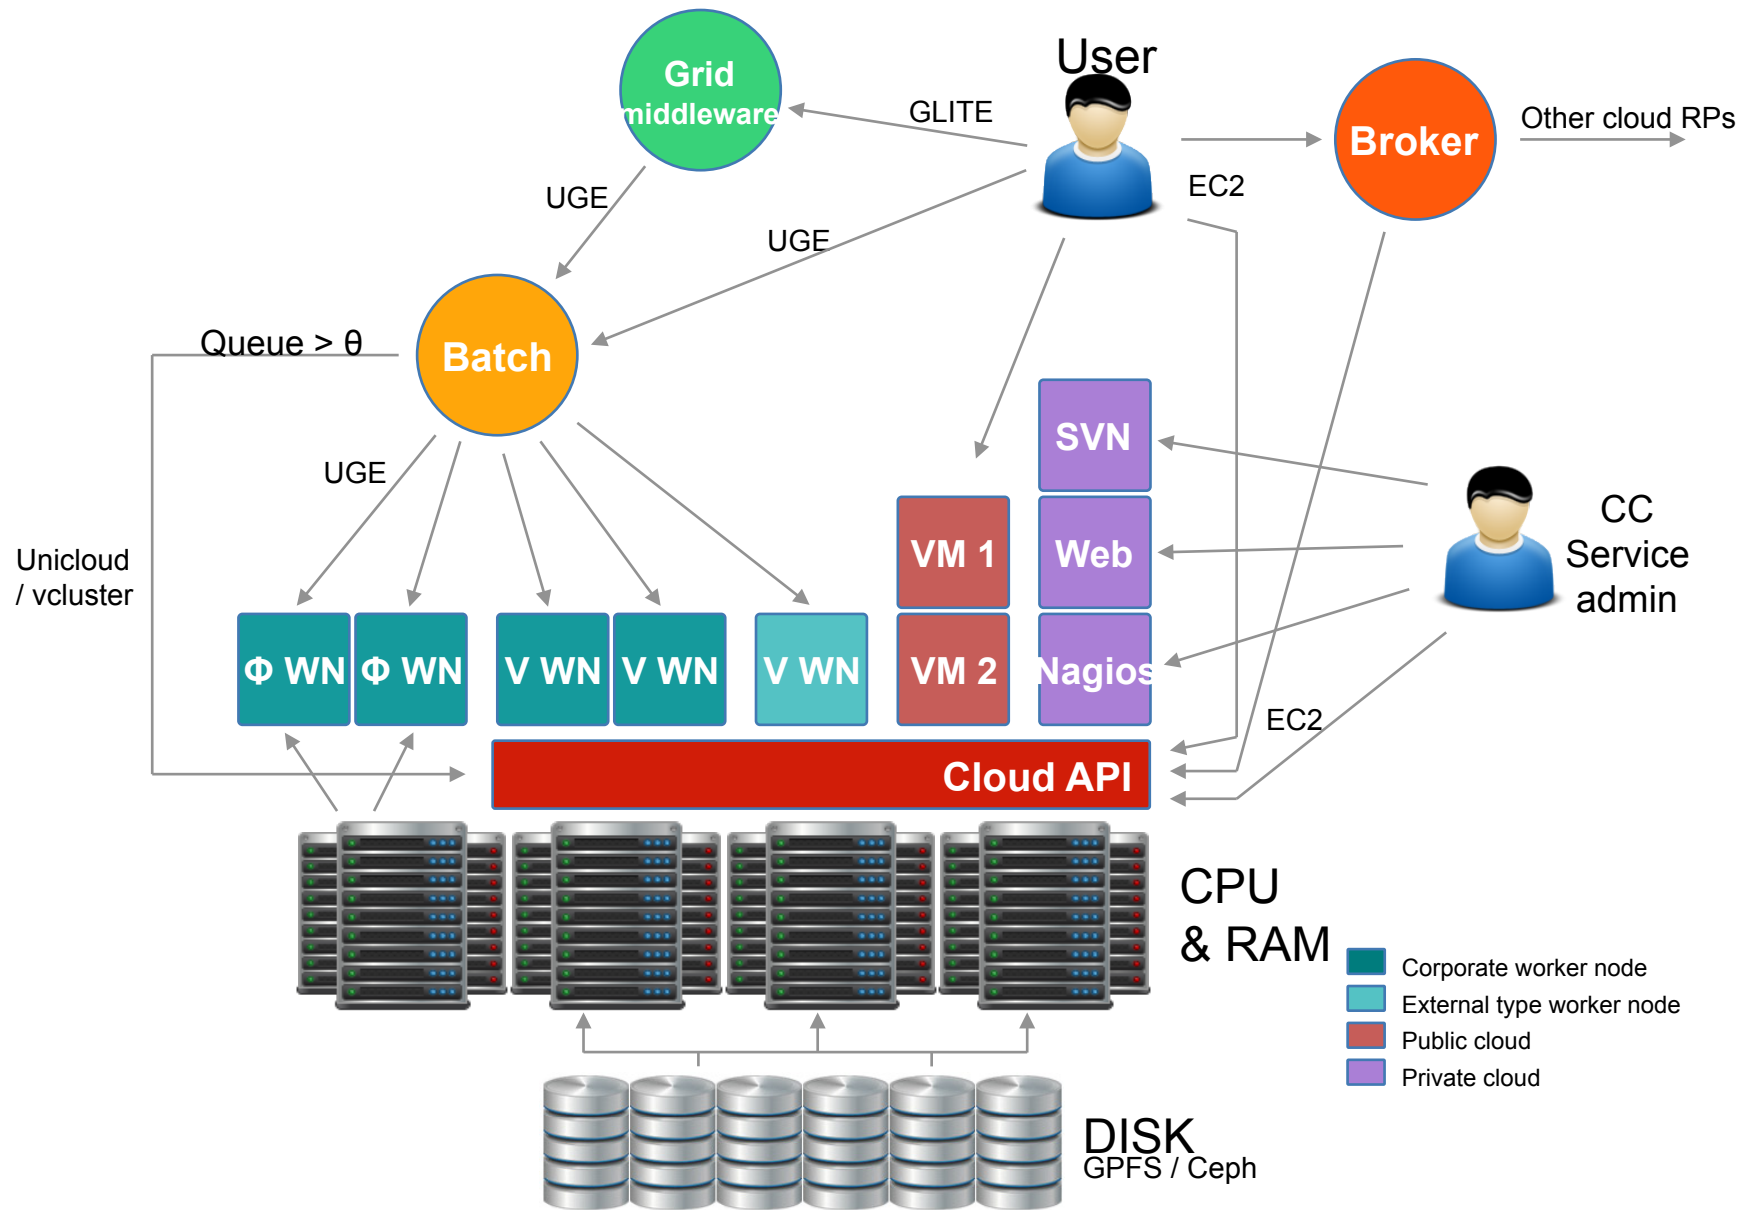

New OTRS incident tracking system

Big effort in documentation and procedure writing

Next to come : CMDB and Disaster Recovery Plan

# IAAS Cloud : toward a unified infrastructure

# Cloud implementation: Openstack

## Deployment :

- Scientific Linux 6
- RDO packages, Havana release
- Configuration with Puppet

## Community cloud cluster :

- 400 cores for test/dev VMs, 100 cores for infrastructure services (DELL C6100)
- 30TB Cinder volumes ~ Amazon EBS (DELL PE R720xd )

## Private cloud cluster :

- 100 cores for infrastructure services

## Computing cluster :

- 500 cores (DELL M610)

## Team started in 2008

- \*\* One permanent member: F. Suter
- \*\* Associated to a research team in a CS lab since 2012

## Initial Objective

- \*\* Build and strengthen links between Computer Scientists and users of large-scale DCIs in production

## Research Topics

- \*\* Simulation of parallel and distributed HPC systems and applications
- \*\* Modeling and simulation of storage
- \*\* Workflow scheduling

## Perspectives

- \*\* Apply research results to applications from the physics domain
  - > Collaboration with the SNFactory experiment
- \*\* Bring expertise on HPC to physics collaborations
  - > Act up stream to be effective in the decision process

## The first French server is born at CC-IN2P3

WWW was born at CERN by  
and for physicists in 1992...

... closely followed by CC-IN2P3's first  
French web server
