## Recent Heavy Flavor Results from Tevatron

*vendredi 20 mars 2015 17:45 (15 minutes)*

The run II at the Tevatron ended on september 2011 after a successful running and producing a plethora of results. Since then, the production of extraordinary results have not ended. Over the last year, 8 results on Heavy Flavor physics have been published with the complete dataset recorded at CDF and D0.

In this talk we will give a short summary of the recent results on excited B-mesons, mass and lifetimes of b-baryons, lifetime on flavor specific Bs decay, direct and indirect CP violation in charm, and forward-backward asymmetries in b-hadrons.
