

# Broader partnership with CC IN2P3

*Partnership meeting with IN2P3: May 2015*

Athol Kemball

Dept. of Astronomy & NCSA

University of Illinois at Urbana-Champaign

Theme Lead: Physics & Astronomy (NCSA)

National Center for Supercomputing Applications  
University of Illinois at Urbana-Champaign

- NCSA: R&D unit of the U. of Illinois at Urbana-Champaign
  - One of original five supercomputing centers funded by the National Science Foundation (NSF) in 1985.
    - **Mission:** Provide state-of-the-art computing capabilities (hardware, software, HPC expertise) to scientists and engineers in the US
- Current profile:
  - Approximately 200 staff (160+ technical/professional staff), two facilities
  - Operating NSF's most powerful computing system: Blue Waters
  - Managing NSF's national cyberinfrastructure: XSEDE
  - Private Sector Program: over 2 dozen industrial partners

Source: Thom Dunning

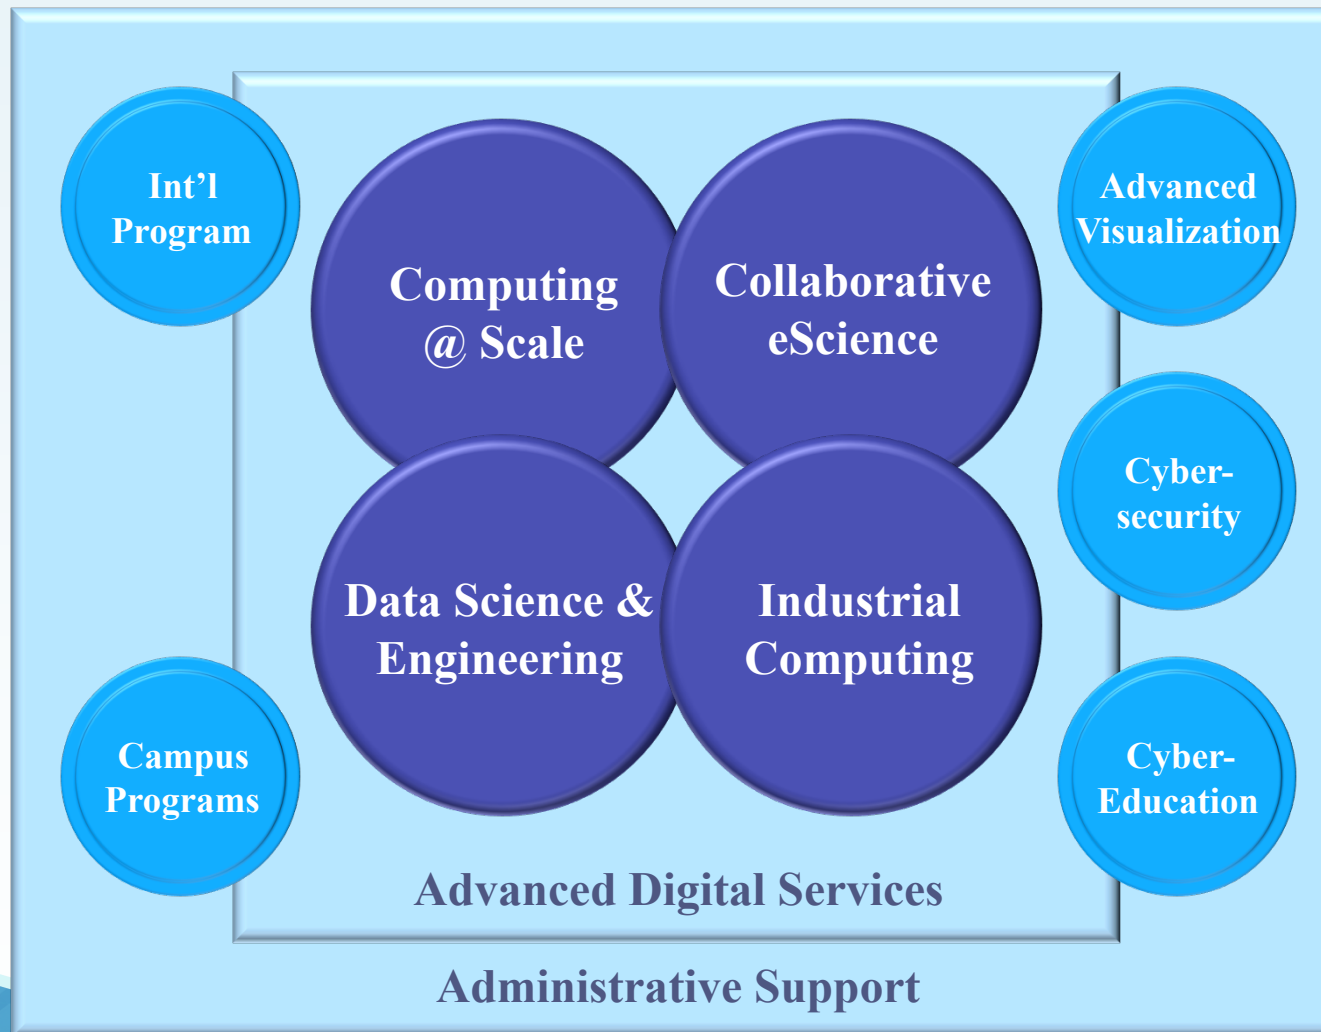

- What does NCSA do ?
  - **Execute large projects** in compute- and data-intensive science (CDSE):
    - Build and operate large-scale national compute & data resources (e.g. Blue Waters).
    - Common national cyberinfrastructure (e.g. XSEDE).
    - Domain-specific CDSE project execution (e.g. DES, LSST).
  - **Leading-edge research and education** at national level in CDSE.
  - **Promote economic development** at state and federal level.
  - **Foster interdisciplinary CDSE research** within the University of Illinois in partnership with faculty, research scientists, & students.

Source: Thom Dunning

# NCSA Major Activities

- A broader partnership between NCSA and CC IN2P3
  - **Many overlapping interests:**
    - Data-intensive science and technology
    - Computing at scale: science and technologies
    - Storage technologies
    - Facility operations
    - ....
    - Open to any proposals

# NDS CONSORTIUM WORKSHOP

*Join us in Austin March 25-27 where we will focus on establishing the governance for the NDS Consortium, growing the pilot projects, and sharing the latest on funding efforts.*

# The National Data Service (NDS)

The National Data Service (NDS) is an emerging vision for how scientists and researchers across all disciplines can find, reuse, and publish data. It builds on the data archiving and sharing efforts already underway within specific communities and links them together with a common set of tools designed around the following capabilities:

## Search

The NDS will allow users to easily search for data across disciplinary boundaries. As users hone in on data of interest, they can easily switch to discipline-specific tools.

## Publish

The NDS will connect users to tools for building and sharing collections of data. It will help users find and deliver data to the best repository for data-publishing.

## Link

The NDS will create robust connections between data and published articles. When researchers reference an article, they have ready access to the underlying data.

## Reuse

The NDS will not only provide access to data for download, it will provide tools for transferring data to processing platforms or allow analysis to be attached to the data.

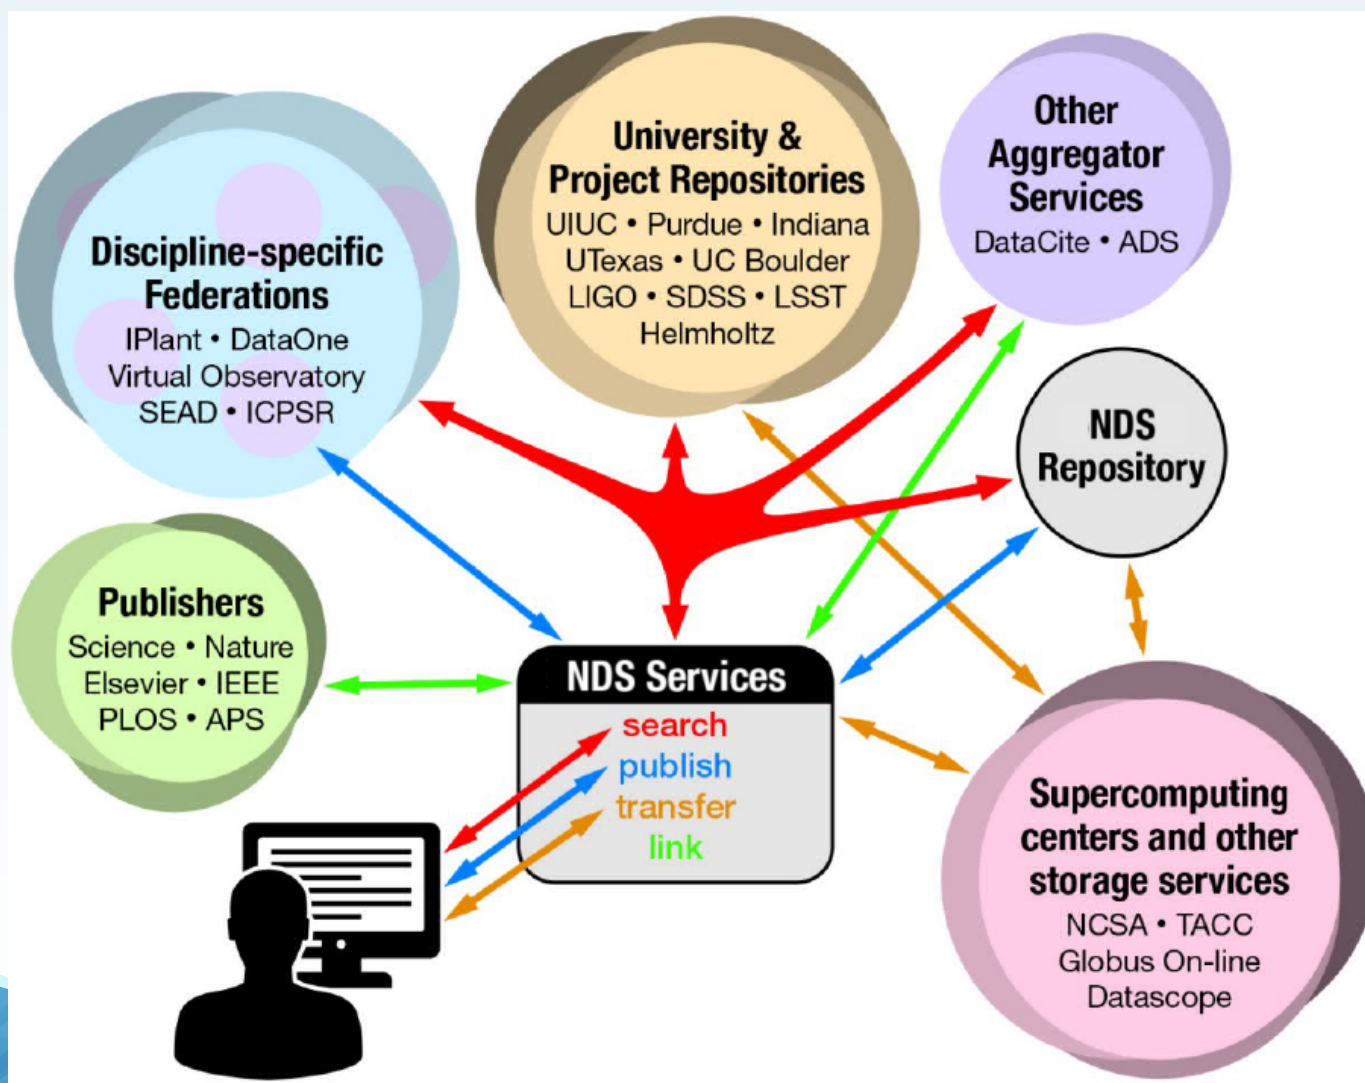

# Description of NDS goals and capabilities

- <https://youtu.be/BPT1FNFAvnc>
- Core NDS capabilities:
  - Searching for data
  - Moving data, between repositories and computing platforms
  - Sharing and publishing data
  - Creating, maintaining, and tracking links between data and literature.

# NDS architecture

# Pilot projects

- OLDRADA: Data-Literature Linking
  - *Linking data and literature together within an open, flexible standard*
- yt-Hub: Advanced Data Presentation and Analysis
  - [Visualization and analysis using yt.](#)
- Materials Data Facility: An NDS Publishing Protocol for Materials Science
  - *Generic NDS publishing portal for materials science*

## What is NDS Labs?

NDS Labs is an environment where developers can prototype tools and capabilities that help build out the NDS framework and services.

[Read more »](#)

## Accessing NDS Labs

Learn how you can propose a project for development in NDS Labs as well as how to connect once your project is approved.

## Welcome to NDS Labs!

### Now what is it?

NDS Labs is an environment where developers can prototype tools and capabilities that help build out the **NDS** framework and services. Labs provides development teams with access to significant storage, machines that can run services, and useful tools for managing and manipulating data.

We have set up NDS Labs as a place to learn through building what is needed in a national data infrastructure. It's an environment that enables a developer or a small team of developers to explore an innovative idea, prototype a service, or connect existing applications together to build out the NDS ecosystem.

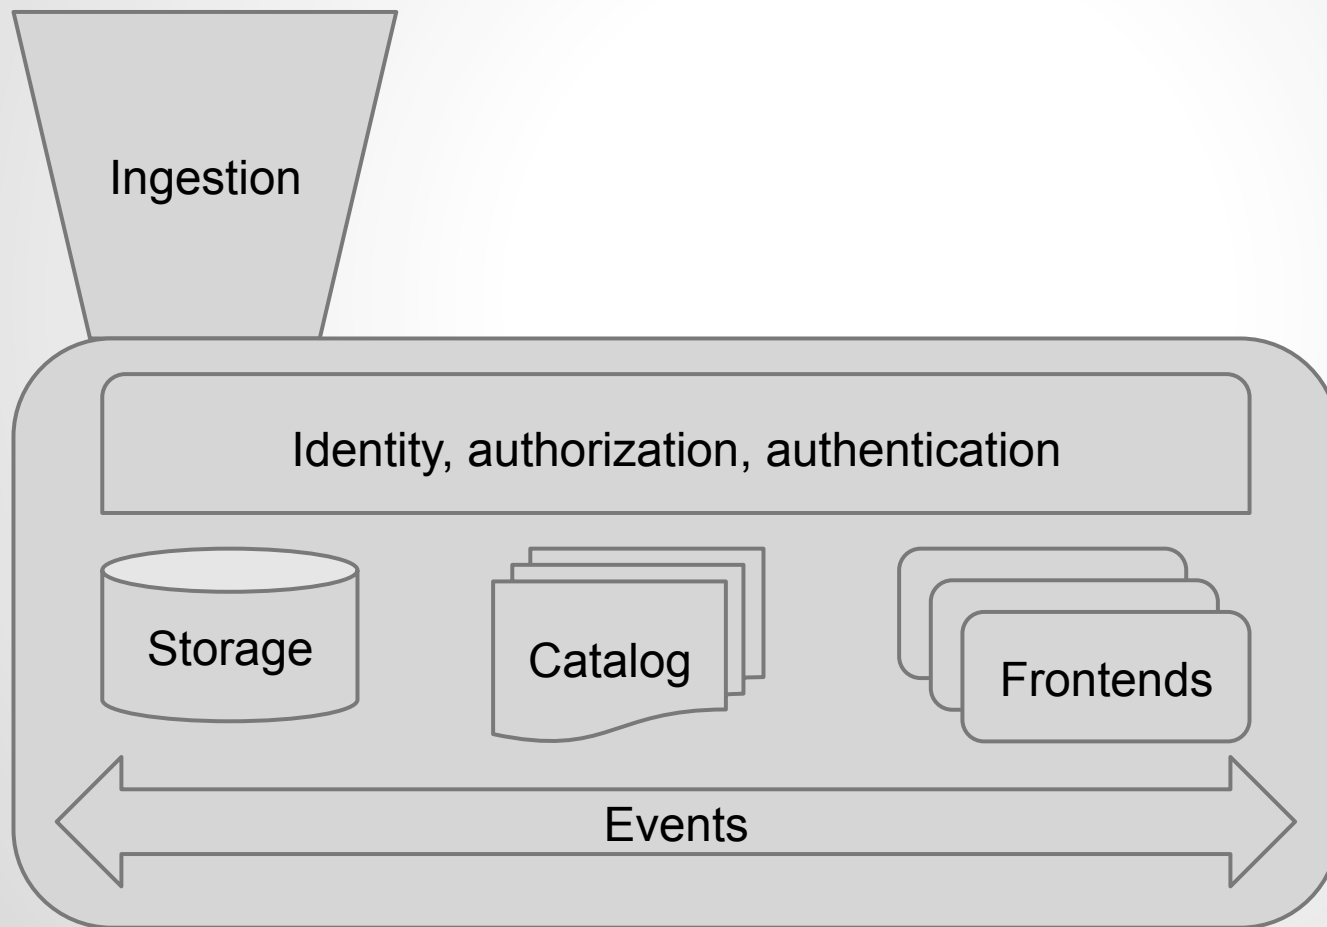

Find out more about:

- [the purpose of NDS Labs](#)
- [what makes a good project for Labs](#)
- [useful resources and tools available in Labs](#)
- [how to get apply and get access to Labs](#)
- [how build things in Labs](#)

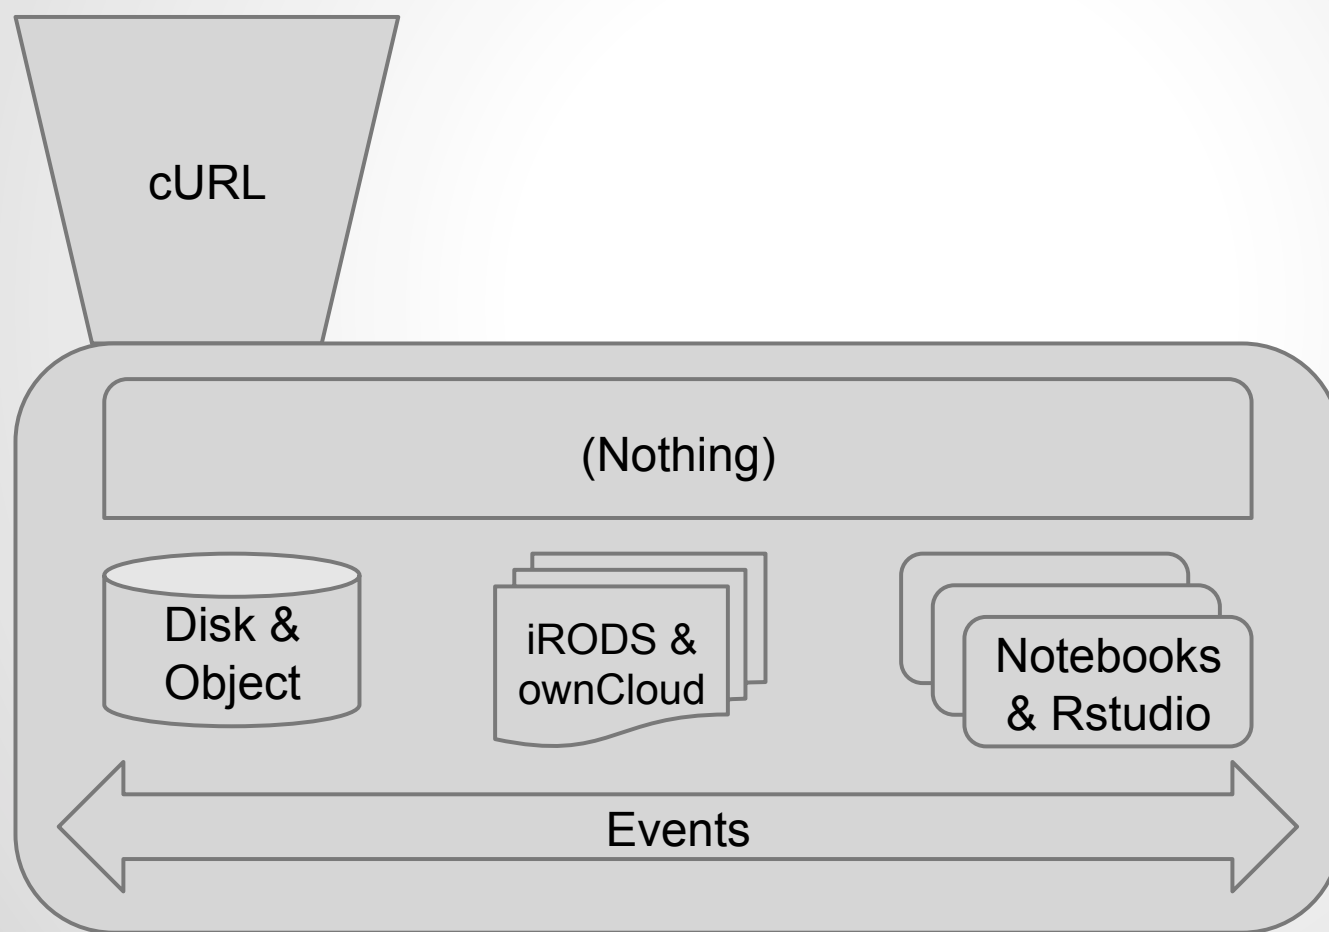

NDS Labs is just one way to [join the NDS community](#).

# Summary

- NCSA would like a broad partnership with CC IN2P3.
- We are open to different areas of collaboration.
  - Data-intensive computing (e.g. NDS).
  - Advanced computation
  - Facility operation.
  - Infrastructure technologies.
