The CKM angle gamma

dimanche 13 mars 2016 17:20 (15 minutes)

Latest results will be presented from the analysis of open charm B-decays, sensitive to the CKM angle gamma, from the Run 1 LHCb dataset.

This includes new results using the ADS, GLW and GGSZ techniques applied to $B \rightarrow DX$ decays.

The talk will conclude with a discussion on the determination of gamma from these tree-level decays, as well as the associated hadronic parameters.
