

FJPPL Hands-on work results

It works!

-  makes us happy
- Original solution by  worked perfectly
- We improved one (!) aspect during the workshop
- Will cover our use-cases:
 - Strong authentication using SSO
 - Restrict access to data by user/role
 - Provide custom views (kibana) per user/role

Next

- Provide a pre-production platform for CCIN2P3
 - port existing dashboards
 - organize training (mainly to use kibana4 and in-house query tools)
- Outreach
 - Contact CERN Openstack team for migrating their existing platform currently based on 's initial research
 - provide some documentation could be a first step
 - Spring HePIX? (KEK)
 - Elasticsearch meetup? (CCIN2P3)
- Port solution to next major versions (CCIN2P3)
 - Elasticsearch (2.x)
 - Kibana (5.x)

Open questions / risks

- one of the main components used (searchguard) is not guaranteed to be maintained in an opensource manner
- Solution needs maintenance
 - but probably simple enough

- kibana patch to be submitted to elastic
- Maybe one day the current commercial solution of elastic will be free to use
