

Sciences and Engineering for Advanced Materials and Devices

Resp. Alix Gicquel, Prof. P13

Centre d'excellence dans le domaine des Matériaux Fonctionnels & des Matériaux de Structure pour les technologies de demain

www.Labex-Seam.fr

- AU cœur de l'interface Physique, Sciences pour l'Ingénieur et Chimie
- A l'interface entre matériaux et dispositifs
- Ouvert à des applications multi-sectorielles
- Compétences et expertises qui couvrent un large domaine scientifique
- Ses forces sont
 - ✓ La diversité des matériaux développés et des dispositifs en résultant est fondée sur de récentes avancées technologiques en termes de procédés et sur le développement en micro-nano-fabrication
 - ✓ L'émergence des nouvelles propriétés des matériaux
 - ✓ Le contrôle de la stabilité des surfaces et leur fonctionnalisation
 - ✓ Une approche multi-échelle / multi-physique
- Domaines d'applications: aéronautique & transports, électronique, électronique de puissance, photonique, optique, opto-mécanique, télécommunications, nano-magnétisme, énergie, ingénierie civile, biomédical

Le Labex SEAM au sein d'Université Sorbonne Paris Cité

- Environ 185 (enseignants-)chercheurs permanents + 120 doctorants & post-docs
- Par an: 300 articles (revues inter.), 5-6 brevets, 50 invitations à des conférences internationales; 5-6 M€ de contrats.

Forte synergie entre 5 laboratoires : 2 universités UP13 & UP7 & CNRS

- Quelques domaines « phare »: laser à cascade quantique, croissance du diamant, sels de diazonium pour greffage de surfaces, modélisation plasma & matériaux, SUPERTM & Diffraction X (in situ)
- Un comité pilotage de 12 personnes
- Un conseil scientifique international (14 personnes dont 5 industriels et 4 étrangers) présidé par M. Chaker (INRS Québec)

Conception de matériaux

Matériaux et nano-matériaux nouveaux
Nouveaux systèmes de matériaux
Nouvelles architectures de matériaux
Nouvelles fonctions de surface

Conception de procédés Modélisation & diagnostics

Diagnostics : TDLAS, LIF, TALIF, OES, LII,
Modélisation : approches multi-échelles & multiphysiques, scale - up

Plateforme avancée de caractérisation

Propriétés structurales, optiques,
photoniques, électroniques,
spectroscopiques

Applications Conception de dispositifs Photoniques, électroniques, magnétiques, photovoltaïques, mécaniques Aéronautiques

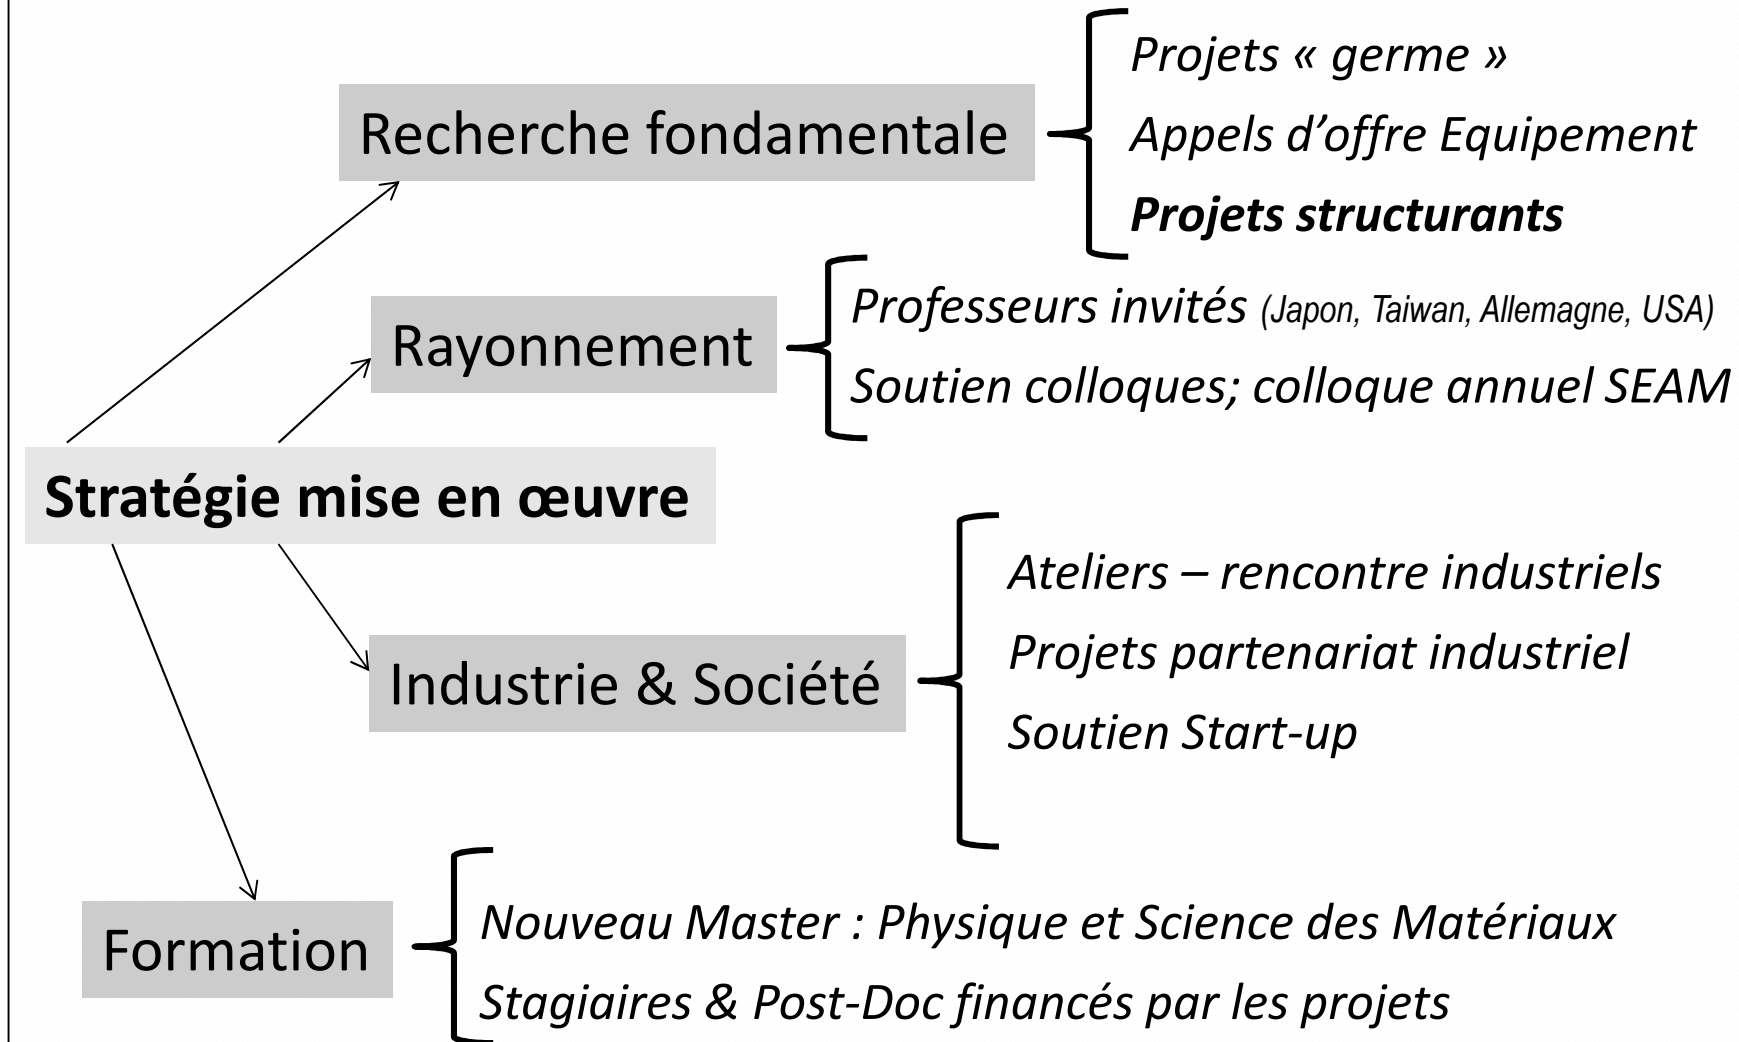

Structuration du LABEX : 3 axes

Axe A				Axe B
Matériaux fonctionnels S. Ammar, P7				Matériaux de structure B. Bacroix, P13
A1 J. Achard	A2 S. Ammar	A3 C. Mangeney	A4 S. Ducci	
<i>Diamant & nanostructures de carbone</i>	<i>Nanomatériaux innovants: magnétiques, photoniques, multiferroïques.</i>	<i>Fonctionnalisation & nanostructuration de surfaces</i>	<i>Dispositifs photoniques</i>	<i>Optimisation des microstructures (prop. méca.) Fonctionnalisation des surfaces (prop. Couplées) Matériaux multifonctionnels</i>
10 %	24 %	18 %	12 %	16 %
Axe C				
Caractérisation & Modélisation des Matériaux et des Procédés C. Ricolleau (P7) & K. Hassouni (P13)				20 %

Functional materials

Goal: confer new intrinsic and/or surface functions to materials & nano-materials

➤ *For photonics, electronics, magnetism, photovoltaics, quantum information*

Graphene, CNT

Nano-layers (metal, oxides), multiferroics, ferromagnetic heterostructures

Semiconductors, Diamond: single crystals, polycrystalline and nanocrystalline layers

Nanocomposites

➤ *For energy, sustainable development*

Conductive polymers, Catalytic materials, electrochromic materials

Nano-particles functionalization

Resuming threading dislocations in CVD diamond layers and improving diamond surface

Quantum cascade Laser and THz devices

➤ *For health, well being & prevention (diagnosis, prevention / therapy)*

Nanomaterials

Anti-bacterial coatings, ...

Structural materials intended for aeronautics, energy, construction

Achieve structural multifunctional materials : metallic, hybrid organic-inorganic or polymer based composite materials

Achievement

Massive or semi-massive structural materials, coatings and metamaterials

Functionalization of their surfaces or their structures (macro or nano, single-layered ...)

Mechanical reinforcement, electrical, thermal conductivity, anti-corrosion, icing prevention

Ageing and sustainability

Aging and functional durability in extreme conditions, operating performance, thermomechanical aging, embrittlement of metals, corrosion

Development of tools for multiphysics coupled simulations

modeling and characterization of structural and thermomechanical behavior

5 Plateformes

Elaboration de matériaux

Caractérisation des matériaux

Diagnostic des procédés

Diagnostic de dispositifs photoniques

Modélisation & Simulation

Les projets structurants en cours

Sélectionnés sur la base de l'excellence, de l'originalité, de la capacité à prendre des risques et à construire un consortium solide, capable en un temps très court de participer à des projets européens.

Project name	Involved Labs	Project leader	Nb involved researchers	Funding (k€)
2013. Magnetic /plasmonic nanohybrids for the theragnostic : controlling the efficiency and their life-cycle in the organism (PlasMag)	MSC, MPQ, ITODYS, LSPM	Florence Gazeau	11	254
2013: Active photonic cavities on chip (CAPTURE)	MPQ, LSPM	Yanko Todorov	6	300
2013. Developing aluminum oxides for innovative photonic devices (DOLPHIN)	MPQ, LSPM, ITODYS	Giuseppe Leo	15	285
2014. Graphene based materials for applications in electronics, biology and energy (GRAPH_MAT)	MPQ, LSPM, ITODYS	Jérôme Lagoute	19	250
2014. Nano Smart Architected Materials for multi-functional new applications : from functionalized nanomagnets in flexible matrix to dense nanostructured multiferroics (Nano-SmArc)	LSPM, ITODYS, LPL, MSC, MPQ	Silvana Mercone	22	220
2014. Ferromagnetic hybrid heterostructures, organic molecules and carbon nanotubes for spintronics (HEFOR)	LSPM, MPQ, ITODYS	Mourad Chérif	11	230
2014. Multi-scale Modelling of material interfaces (MEMI)	LSPM, ITODYS, MSC	Sylvain Queyreau	9	230

Le LABEX SEAM dans l'avenir

SEAM est nécessairement impliqué dans l'émergence du pôle SET: axes de recherche, plateformes, formation,

Science et technologie des molécules aux matériaux innovants

Science et technologie de l'observation et de la modélisation

Background scientifique solide pour répondre à des questions fondamentales

Impact industriel et societal

Formation

Développement de partenariats avec des centres internationaux reconnus
