

Pr. Francis A. Cucinotta is a Professor of Health Physics at the University of Nevada, Las Vegas. He received his Doctorate degree in nuclear physics from Old Dominion University. He worked at NASA as the Radiological Health Officer, Space Radiation Project Manager and Chief Scientist. Dr. Cucinotta developed the astronaut exposure data base of organ doses and cancer risk estimates for all human missions from Mercury to the International Space Station (ISS), and developed risk models for acute, cancer and circulatory disease. He was NASA's manager for the construction and operation of the NASA Space Radiation Lab (NSRL). He worked on radiation safety in NASA's mission control for the Space Shuttle and ISS programs. Dr. Cucinotta has published over 340 journal articles, numerous book chapters and over 100 NASA Technical Reports on radiation biophysics. He is past President of the Radiation Research Society and currently a Council Member of the National Council on Radiation Protection and Measurements.

E. Cacao and F.A. Cucinotta, Modeling Heavy-Ion Impairment of Hippocampal Neurogenesis after Acute and Fractionated Irradiation. *Radiation Research*, Vol. 186, December 2016.
