

Dark matter round table discussion at the next GDR

The idea : To have an informal discussion within the (French) DM community on :

- Direct/indirect/collider dark matter searches.
- Dark matter generation mechanisms.
- Model-building.
- Cosmological probes of dark matter.
- Intensity frontier searches.
- Other ideas...?

The goal : To identify interesting/important directions in dark matter physics, encourage/initiate collaborations between the various groups working on DM in France.

Format : 5-minute presentations by some DM aficionados, followed by a 10-15 minute informal discussion (no slides!).

Your input is most welcome !
