

# Effective Field Theories for Heavy Quarks:

## Heavy Quark Effective Theory, Heavy Quark Expansion, Non-Relativistic QCD

Lectures at Les Houches 2017

THOMAS MANNEL

Theoretische Elementarteilchenphysik, Naturwiss.-techn. Fakultät,  
Universität Siegen, 57068 Siegen, Germany

# 1 Introduction

- Why can we use effective field theory methods for heavy quarks?
- Classification of the various types
- Some historical remarks

# 2 Heavy Quark Effective Theory HQET

## 2.1 Construction of the HQET Lagrangian

- Identifying heavy degrees of freedom
- Types of HQET Lagrangians

## 2.2 Symmetries of HQET

- Flavour Symmetry
- Spin Symmetry
- Reparametrization invariance
- Residual mass term

## 2.3 HQET at one loop

- HQET Feynman rules
- One loop diagrams
- Example: The  $b \rightarrow c$  current

## 2.4 Results

# 3 Heavy Quark Expansion

## 3.1 Inclusive Decays

- Classes of decays

## 3.2 Operator Product Expansion (OPE)

- Set up of the OPE
- HQE parameters
- tree level results

### 3.3 QCD Corrections

- Pole mass
- Kinetic Mass
- 1S Mass Scheme

### 3.4 Results

### 3.5 End-Point Regions

- Twist Expansion
- Relation to SCET and Thomas Bechers Lecture

## 4 Non-Relativistic QCD (NRQCD)

### 4.1 Introduction: Why not just (HQET)<sup>2</sup>?

### 4.2 The NRQCD Lagrangian

### 4.3 Dynamically Generated Scales $mv$ and $mv^2$

### 4.4 The case $mv^2 \leq mv \ll \Lambda_{\text{QCD}}$

### 4.5 The case $\Lambda_{\text{QCD}} \ll mv^2 \leq mv$ and pNRQCD

### 4.6 Results for Quarkonia Processes

### 4.7 Exotic States ?
