## Charm physics with LHCb

*mercredi 22 mars 2017 10:25 (15 minutes)*

An overview of the latest LHCb's measurements in the charm physics sector is presented. This includes measurements of direct and indirect CP-violating observables and precise determination of mixing parameters in two-body  $D^0$  decays, measurements of CP-violating observables in multi-body charm decays and searches of rare charm decays.
