What the LSST software stack can do and how to use it

vendredi 16 juin 2017 09:10 (1h 55m)

In this session, the speaker will present and demonstrate the current capabilities of the LSST software stack and its perspectives. Both the command line interface (CLI) and the application programming interface (API) will be addressed.

A Python notebook-based platform is setup so that participants who want to try the software with a predefined dataset can do so. Participants are expected to bring their own personal computer configured with an operational recent web browser.

Orateur: BOSCH, Jim (Princeton University)

Classification de Session: Hackathon
