

reference scenario

A. van Vliet, R. Alves Batista, J. Hörandel. In preparation

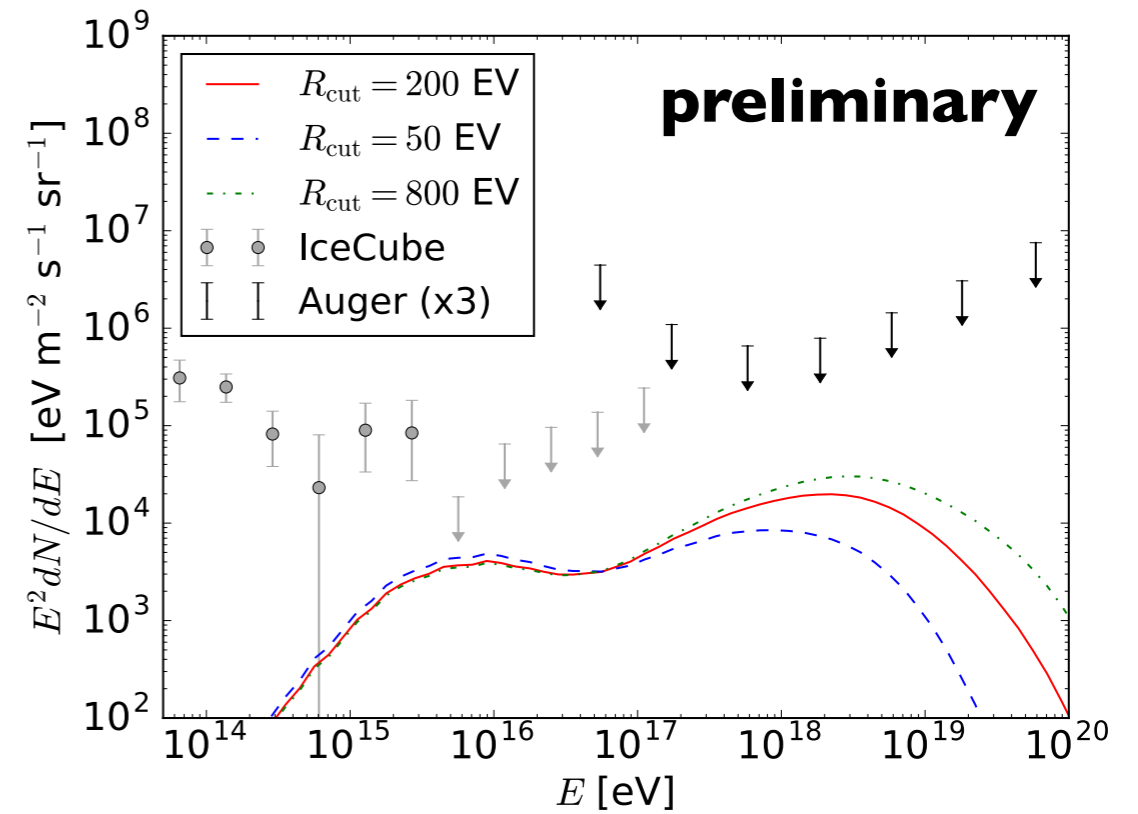

- ▶ spectral index = 2.5
- ▶ maximal rigidity = 200 EV
- ▶ protons only

proton case: rigidity dependence

A. van Vliet, R. Alves Batista, J. Hörandel. In preparation

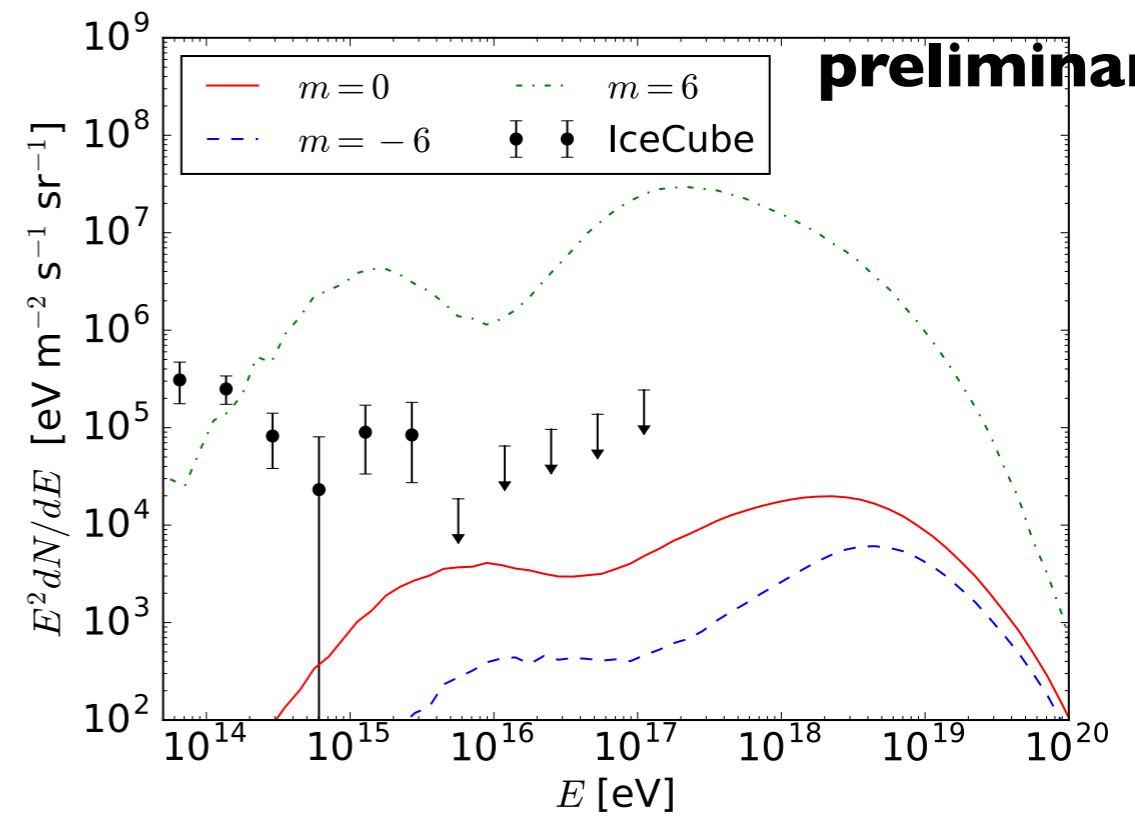

- ▶ spectral index = 2.5
- ▶ maximal rigidity = 200 EV
- ▶ protons only

proton case: source evolution

A. van Vliet, R. Alves Batista, J. Hörandel. In preparation

- ▶ spectral index = 2.5
- ▶ maximal rigidity = 200 EV
- ▶ protons only

proton case: spectral index

A. van Vliet, R. Alves Batista, J. Hörandel. In preparation

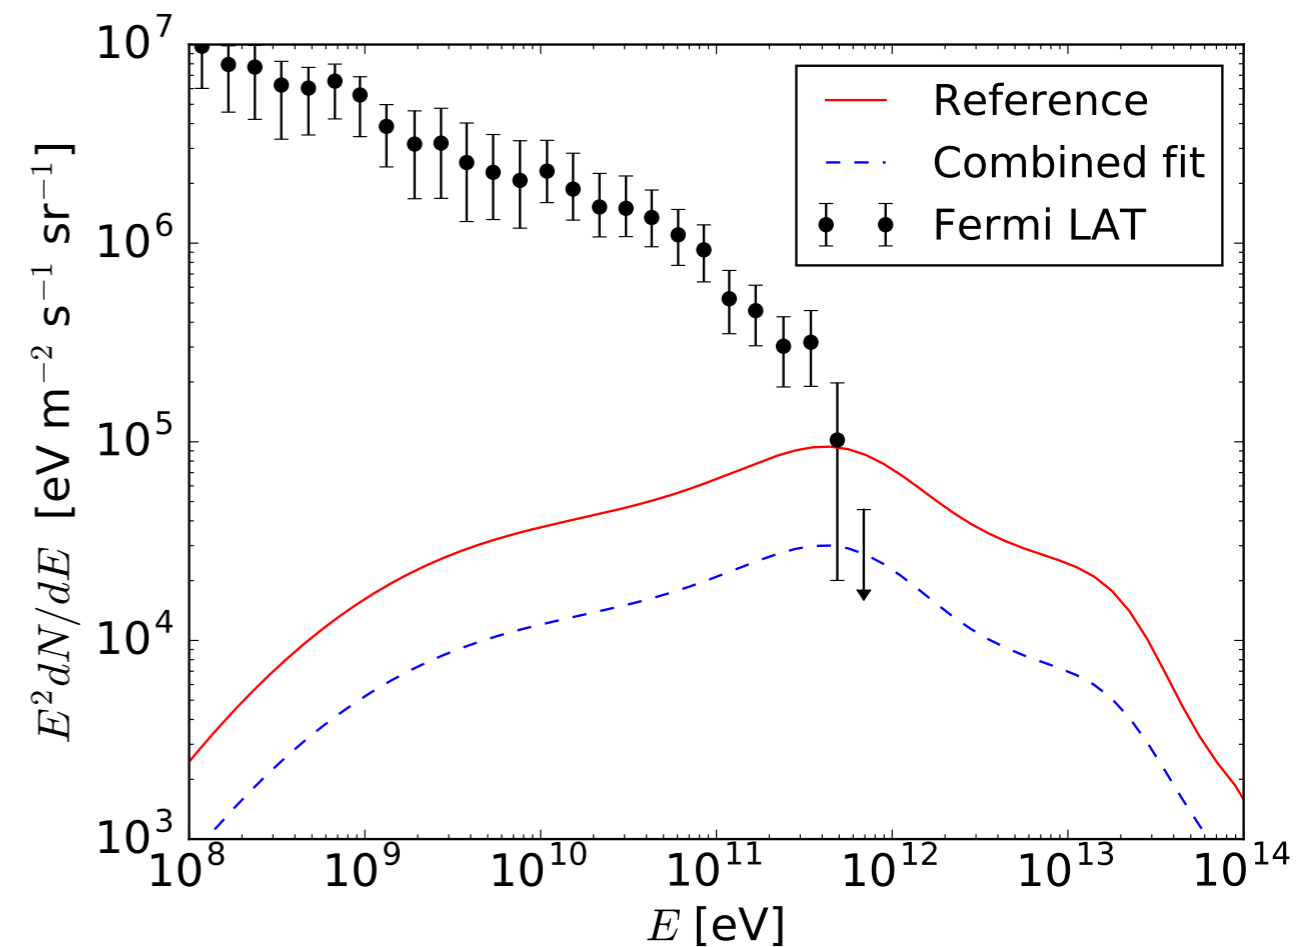

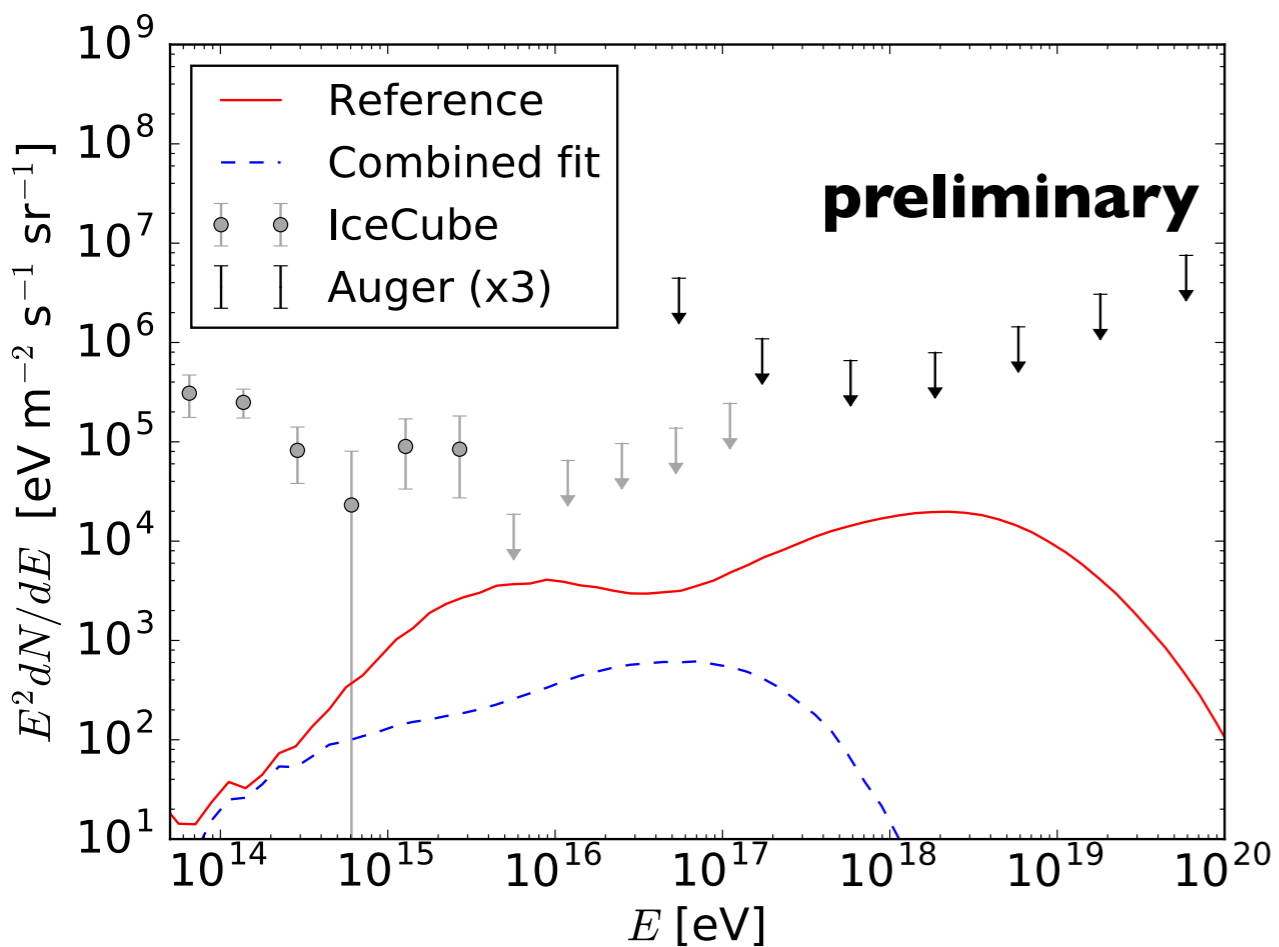

- ▶ spectral index = 2.5
- ▶ maximal rigidity = 200 EV
- ▶ protons only

Auger combined fit

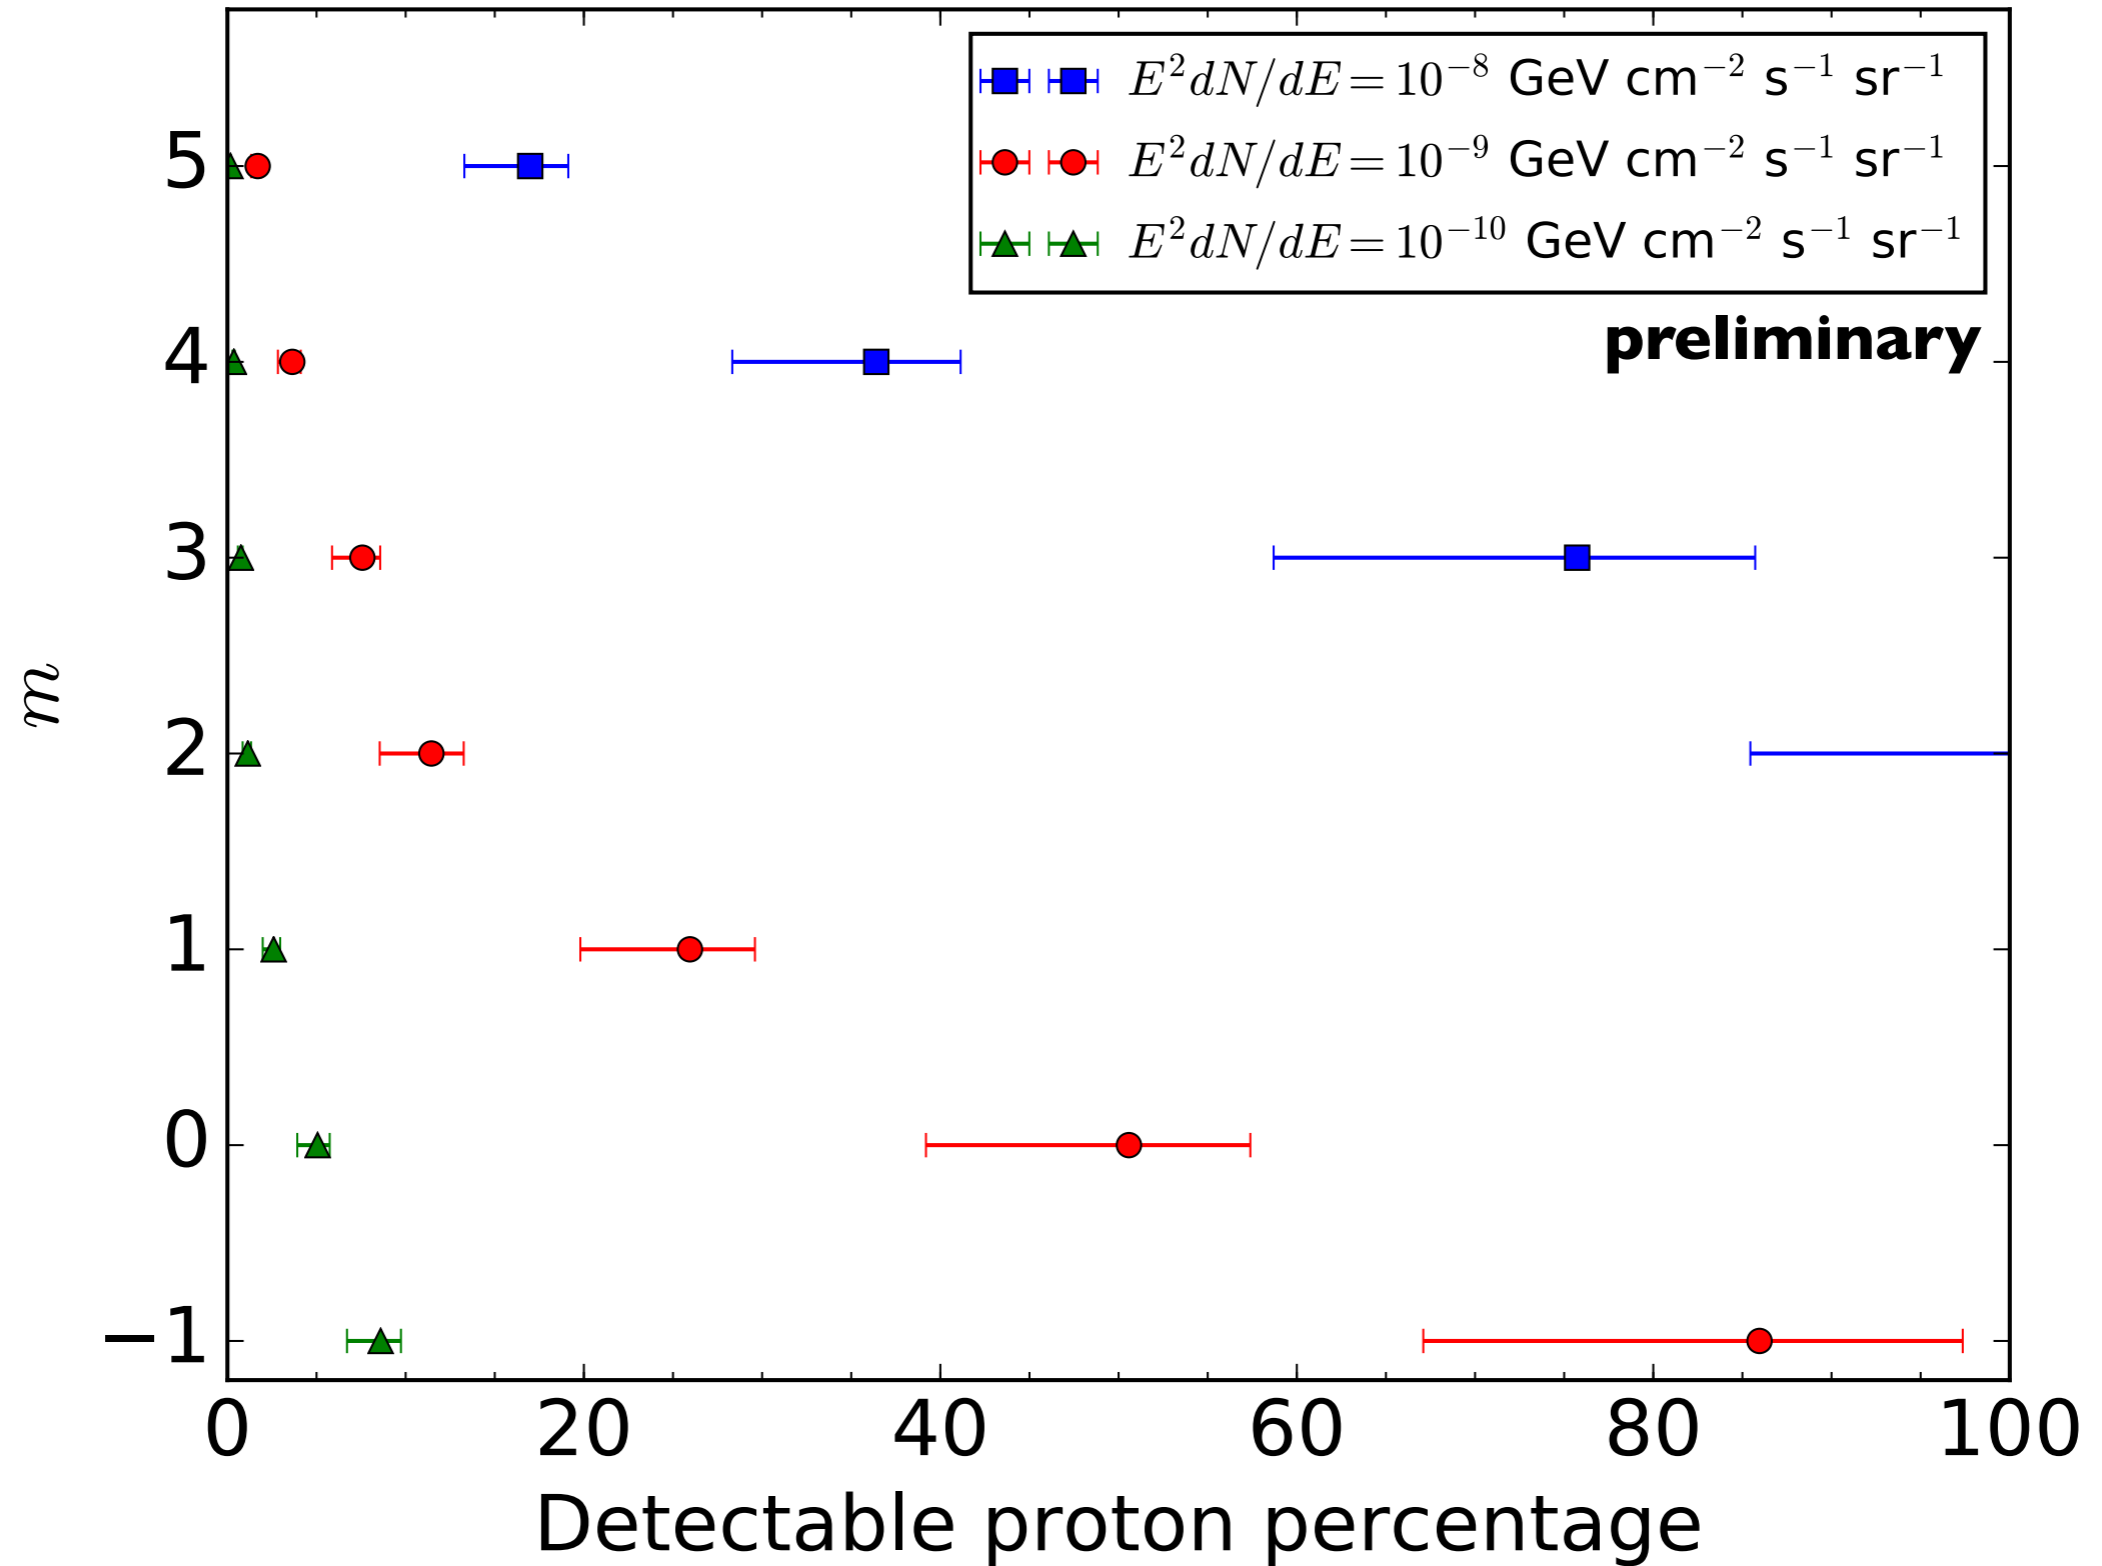

A. van Vliet, R. Alves Batista, J. Hörandel. In preparation

- ▶ arXiv:1509.03732 (ICRC2015)
- ▶ sources: 98.69% nitrogen; 1.31% iron
- ▶ maximal rigidity = 4
- ▶ spectral index: 0.73
- ▶ no source evolution

proton fraction vs source evolution

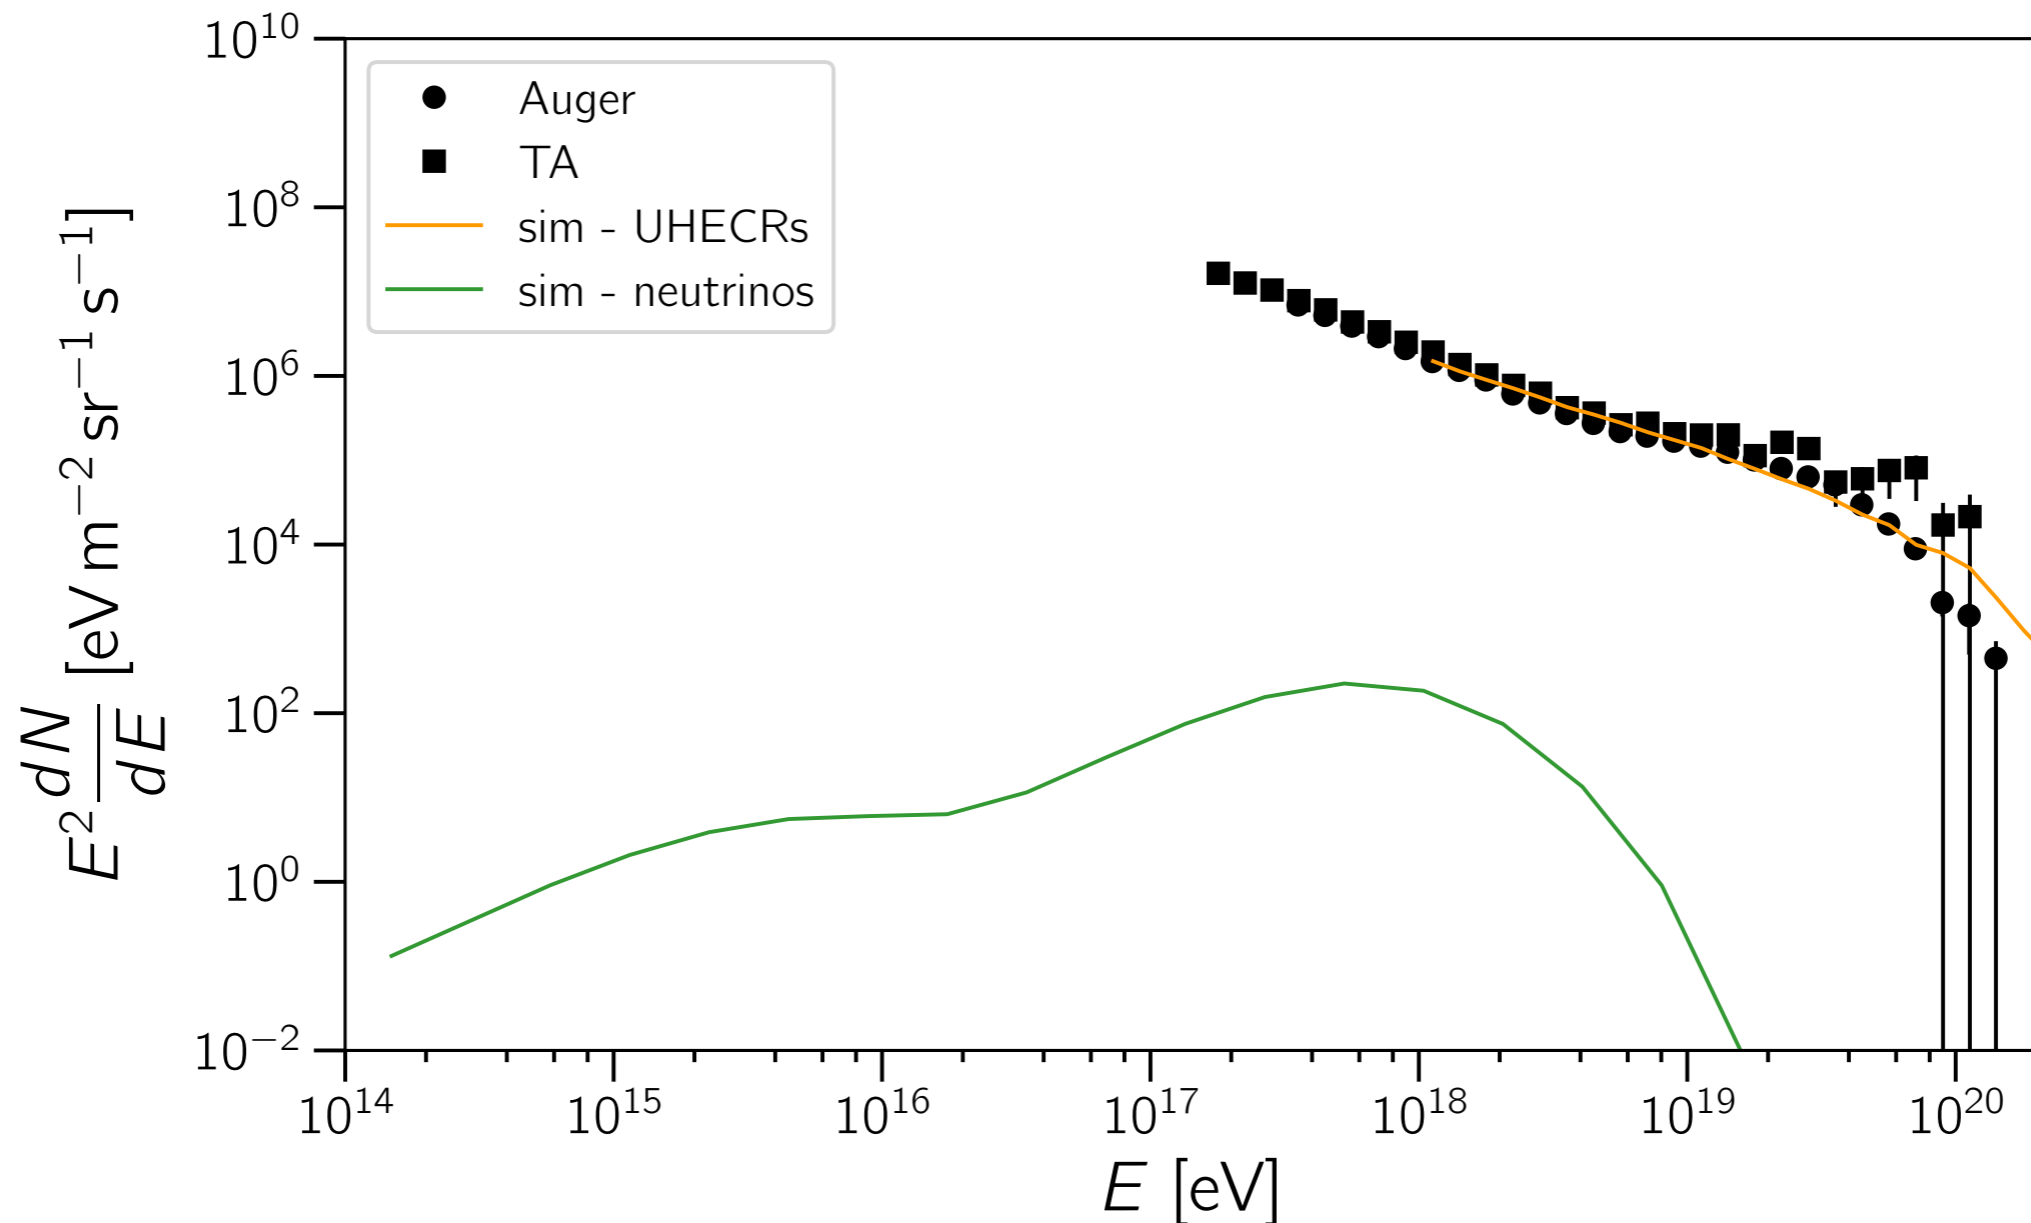

A. van Vliet, R. Alves Batista, J. Hörandel. In preparation

Auger combined fit with source evolution

- ▶ not very accurate fit! (binning very rough, low statistics)

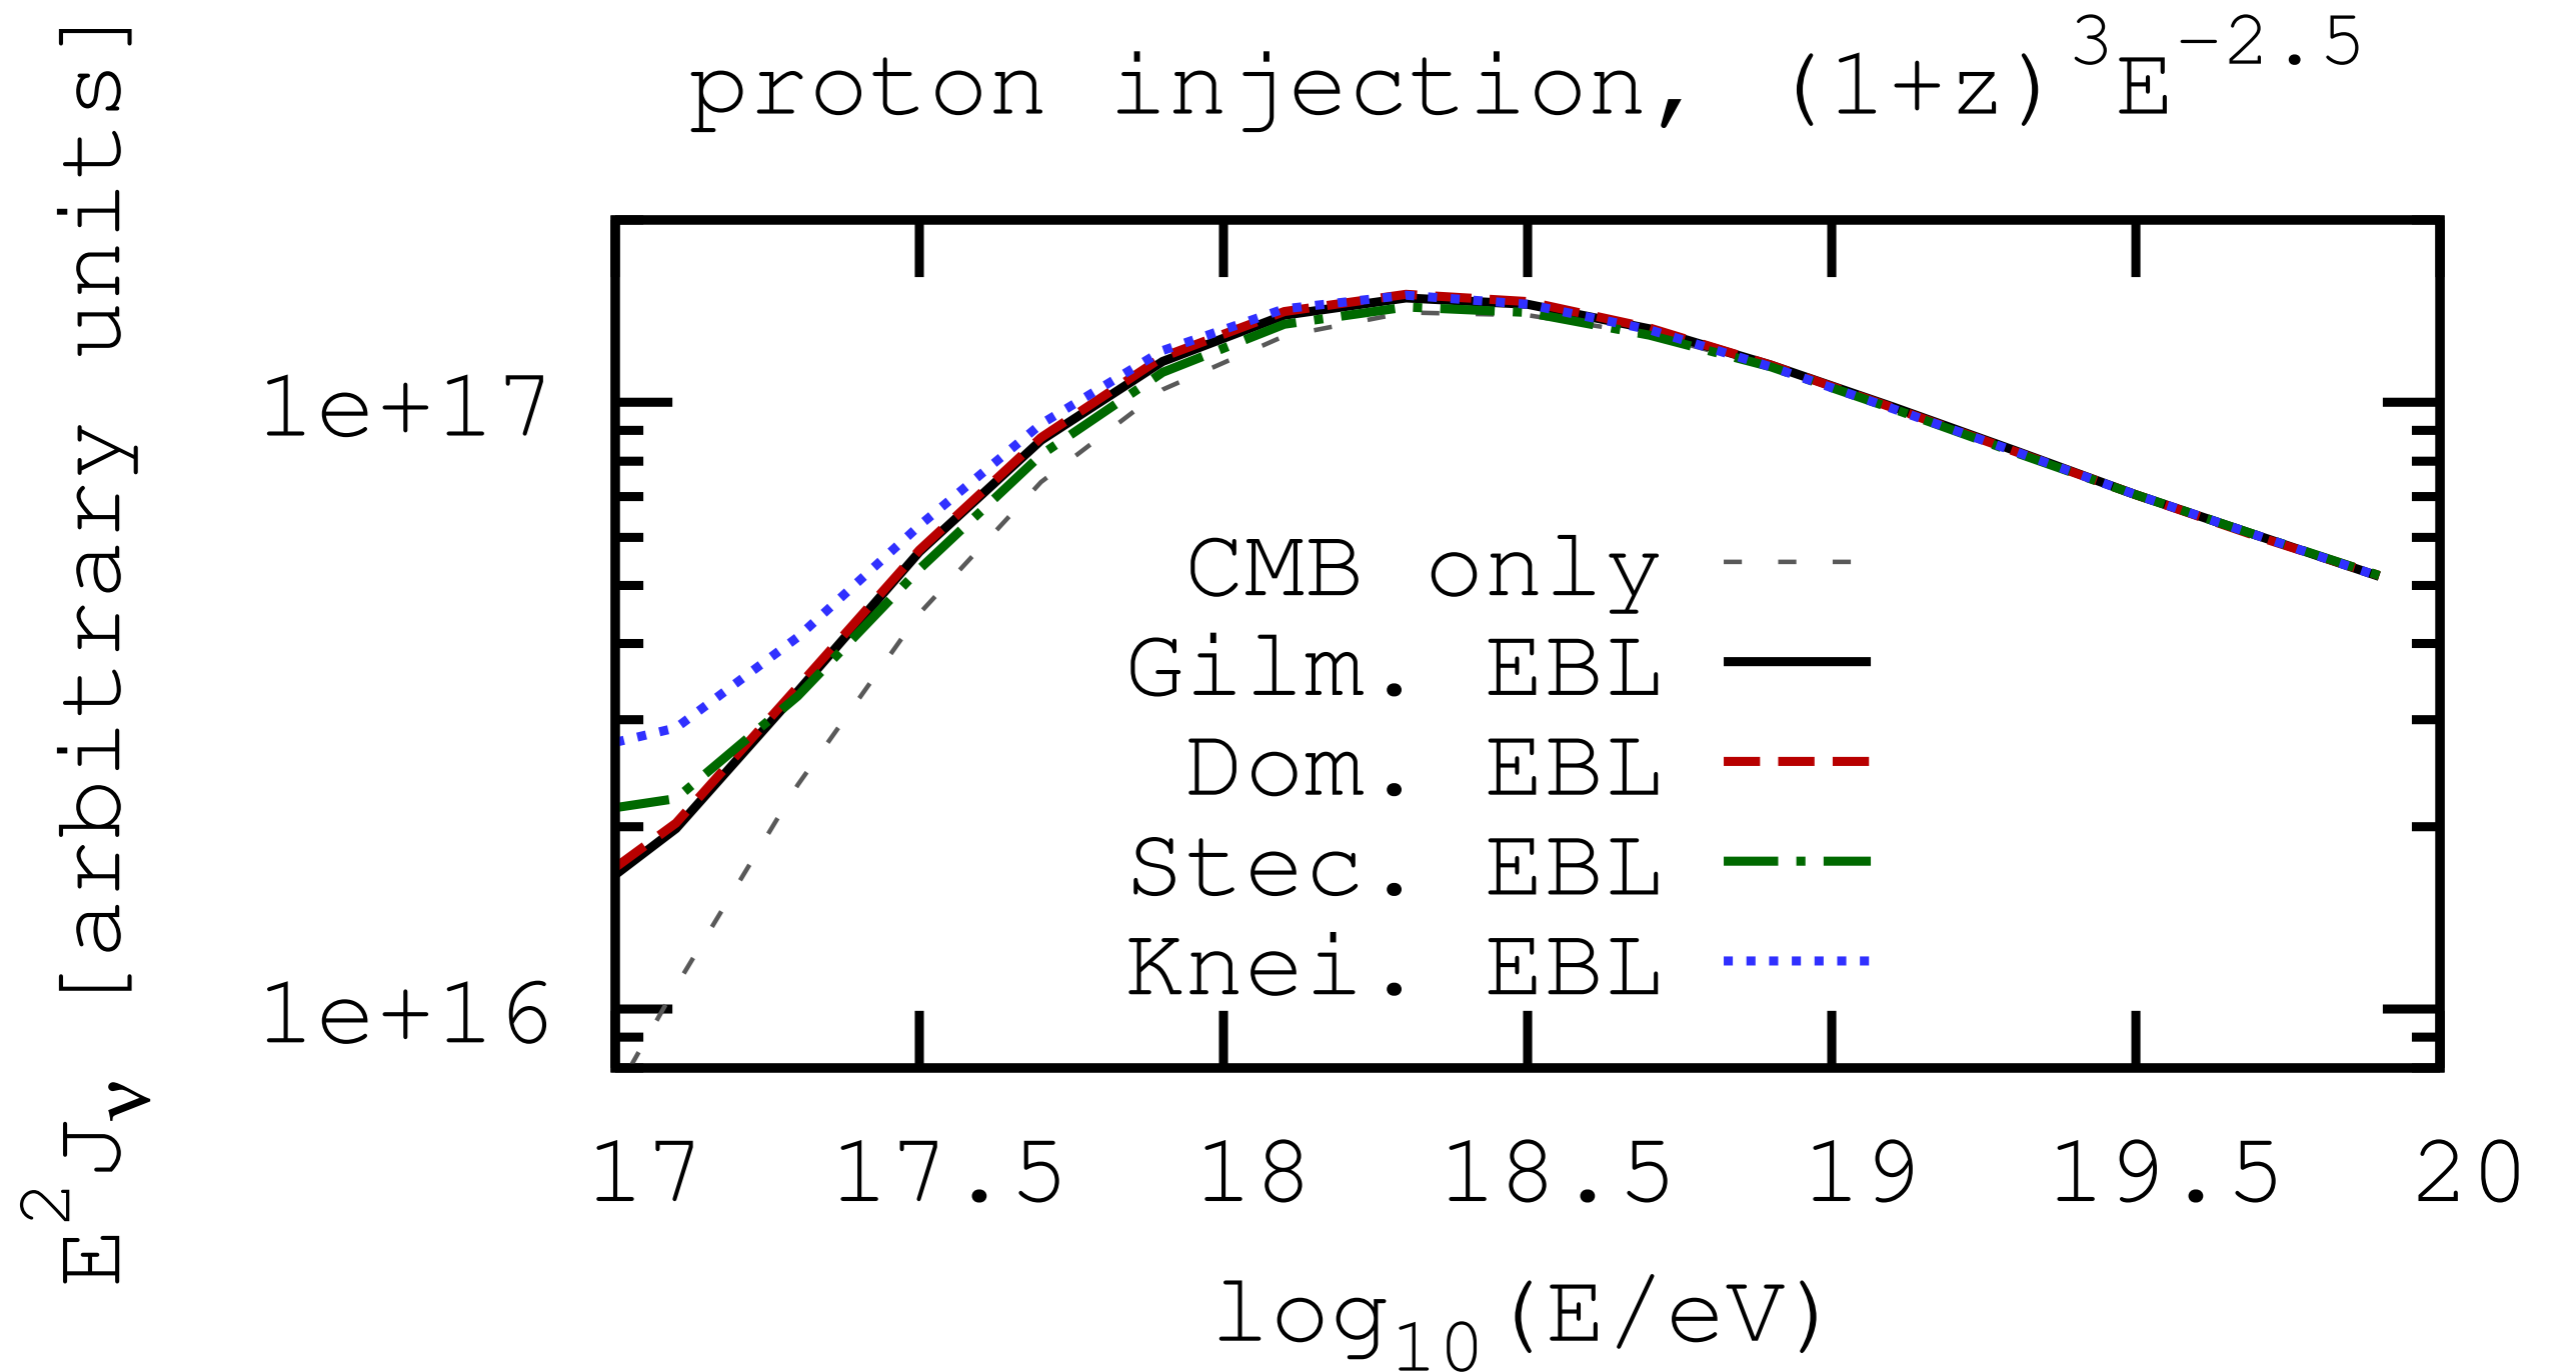

- ▶ extended Auger combined fit
- ▶ maximal rigidity = 6×10^{18} EV
- ▶ spectral index = 0.5

uncertainties due to EBL model

RAB, Boncioli, di Matteo, van Vliet, Walz. *JCAP* 1510 (2015) 063.

arXiv:1508.01824

theoretical uncertainties in the modelling

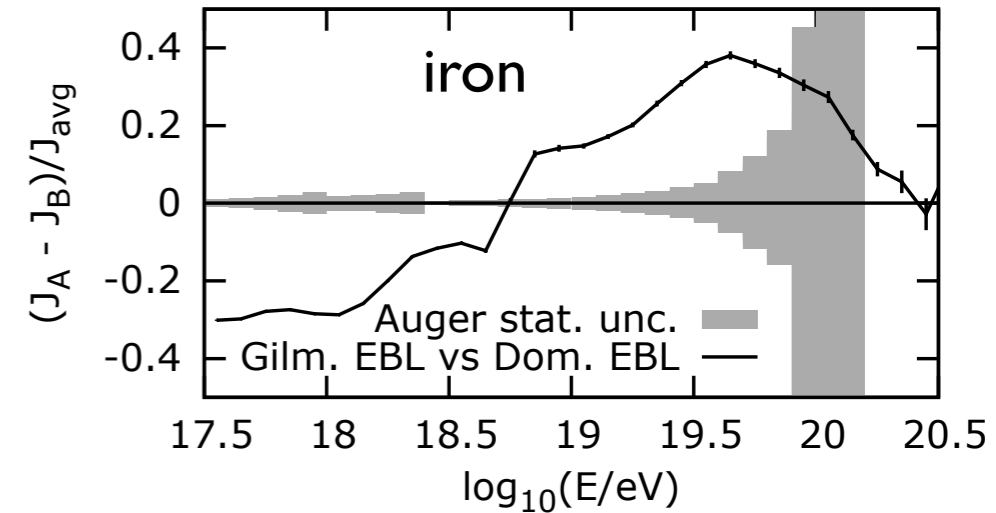

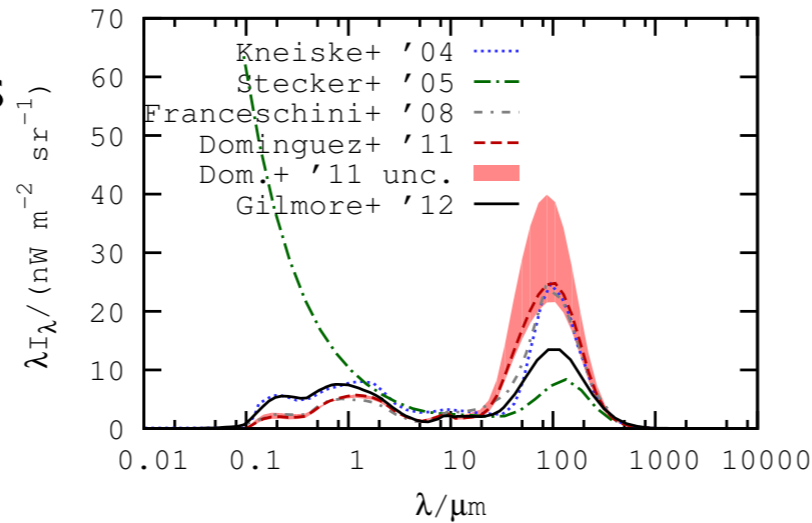

RAB, Boncioli, di Matteo, van Vliet, Walz. *JCAP* 1510 (2015) 063.

arXiv:1508.01824

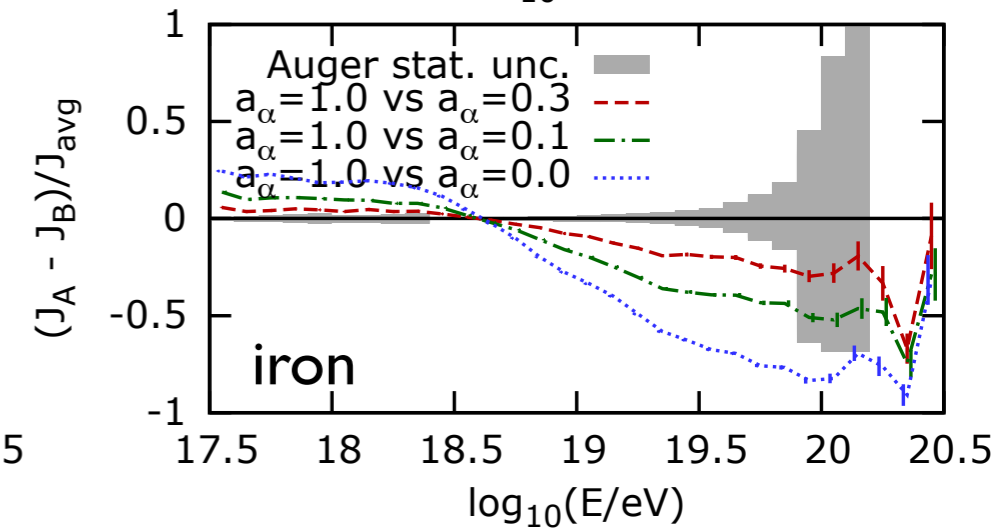

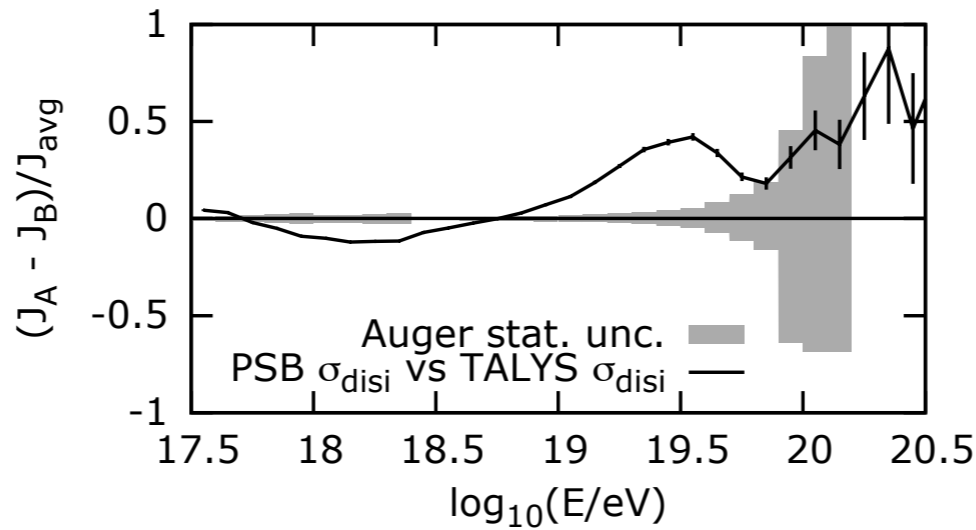

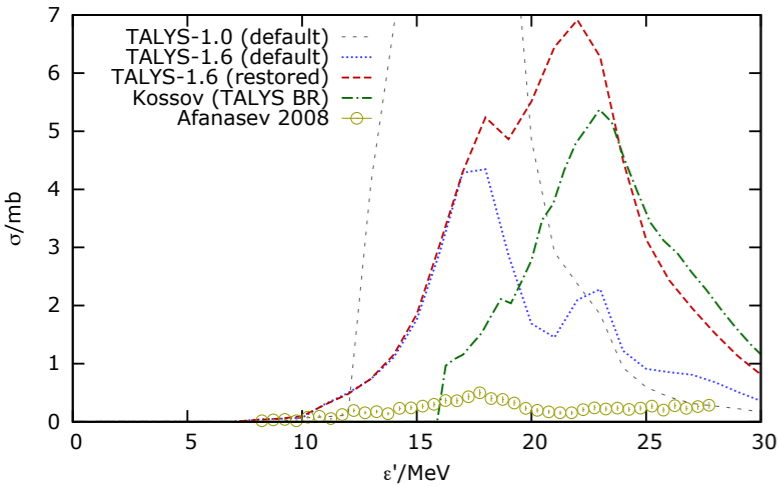

sources of uncertainties

- ▶ photodisintegration cross sections
- ▶ EBL model
- ▶ scaling of alpha-channels

Extragalactic background light at $z=1$

Cross section for $^{12}\text{C}(\gamma,\alpha)^8\text{Be}$, $^{12}\text{C}(\gamma,3\alpha)$

Total photoabsorption cross section for ^{28}Si
