

# The GRAND White Paper workshop

May 16 – 19, 2017

Institut d'Astrophysique de Paris

## General Discussion

Mauricio Bustamante, Charles Timmermans

# To-do list (morning of 17/05)

- Estimate of angular resolution should be more robust – based on simulations, for the white paper
- How to distinguish between neutrinos, gamma rays, and cosmic rays? Using  $X_{\max}$ ? What resolution is needed? How to do it without  $X_{\max}$ ?
- Reconstructing the neutrino, gamma ray, cosmic ray spectrum from shower spectra (for neutrinos, a single interaction inside a mountain will give a cleaner reconstruction of the neutrino spectrum)
