Brane Wess-Zumino terms in String Theory

lundi 15 janvier 2018 14:30 (40 minutes)

I will present some old and new results on duality-covariant brane Wess-Zumino terms describing their coupling to supergravity background fields. In particular, I will show how this leads to a classification of branes satisfying interesting wrapping rules and to the introduction of so-called exotic branes.

Orateur: BERGSHOEFF, Eric
