

SKA

Computing Model

Pete Clarke
EUTO meeting 4-Sept-2017
Paris

Im only repeating slides i have taken from:
Paul Alexander
Anna Scaife
Rosie Bolton
Nick Rees

so thanks !!!

SKA South Africa

Mid frequency dishes : 350MHz – 24 GHz

SKA Australia

Low frequency phased arrays : 50-350 MHz

TECHNICAL SPECIFICATIONS

- STANDS - 1.5M HIGH
- CAPTURES LOW FREQUENCY RADIO WAVES
- WILL INVESTIGATE EPOCH OF RE-IONISATION
- THOUSANDS OF ANTENNAS AT THE CORE SITE FOR SKA PHASE 1
- THE LOW FREQUENCY ARRAY WILL BE EXTENDED ACROSS AUSTRALIA
- COMPUTERS USED TO ISOLATE COSMIC OBJECTS BY FOCUSING ON DATA FROM ONE AREA OF SKY

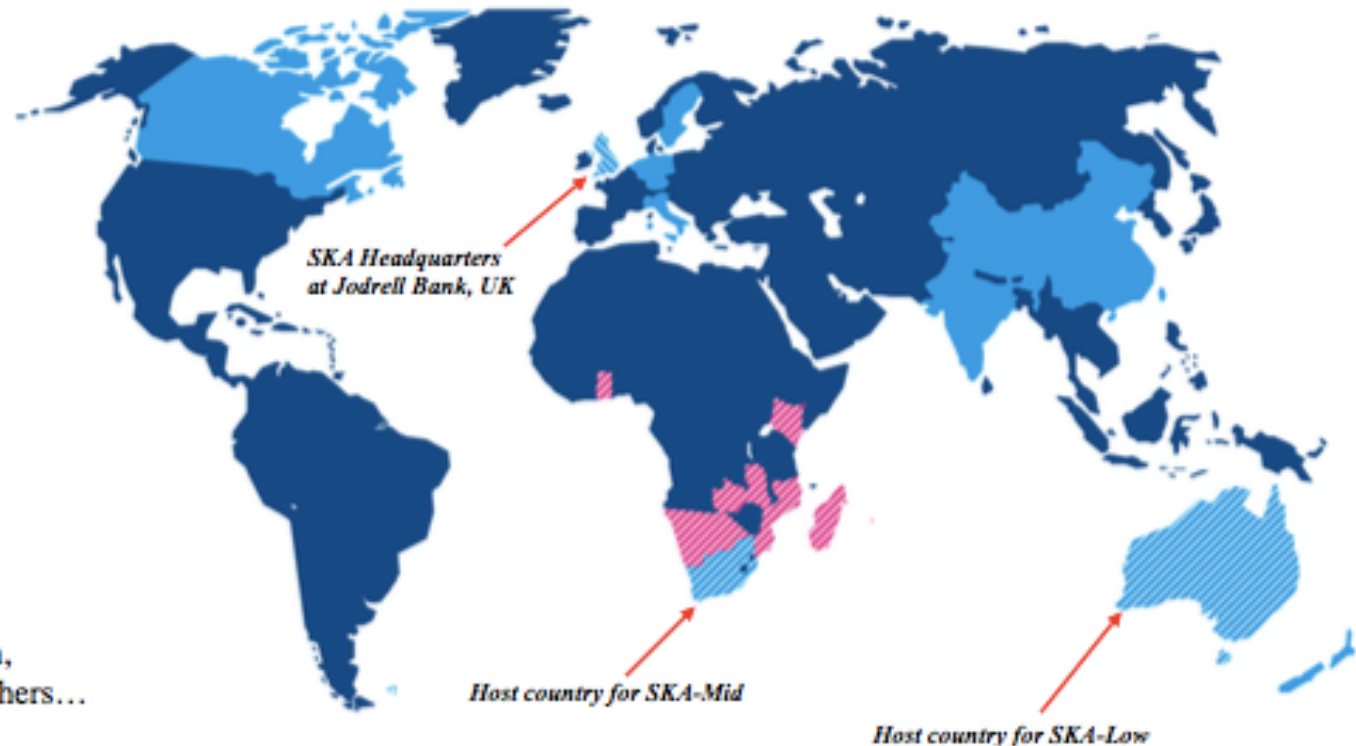

Low Frequency Antenna

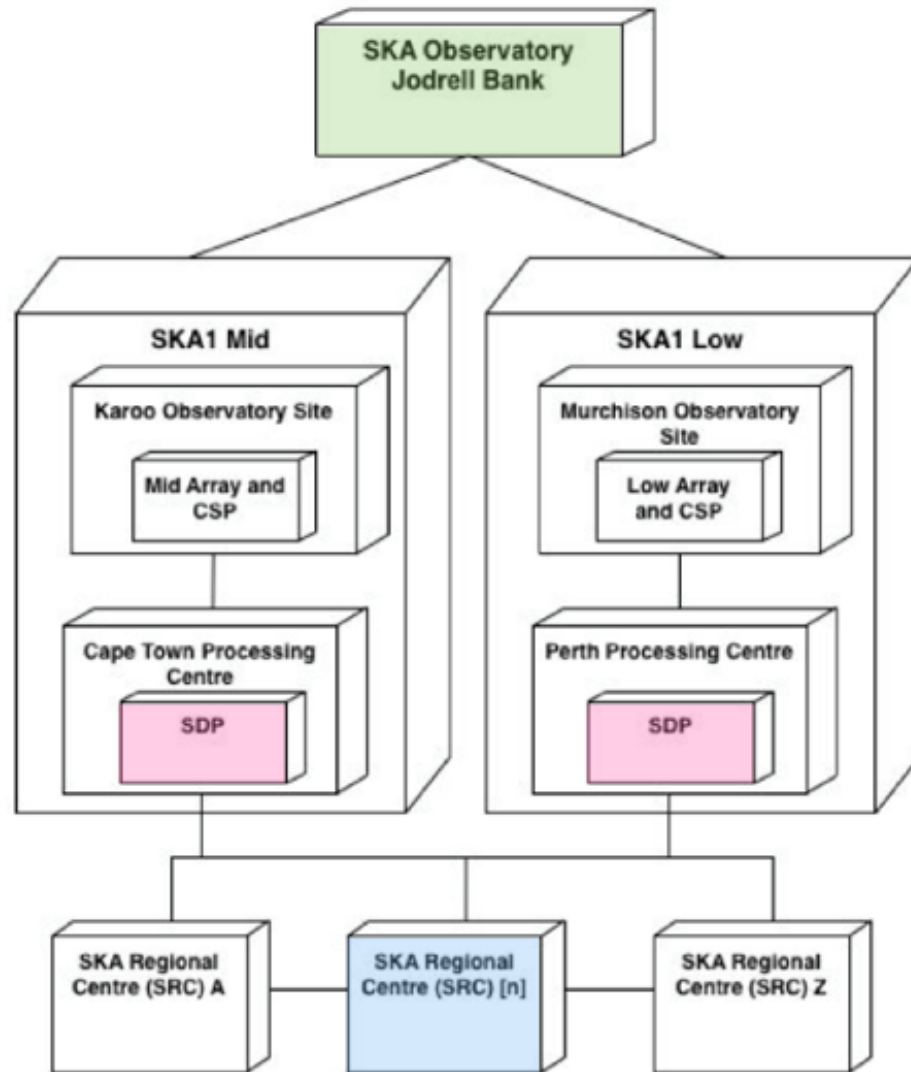

The Square Kilometre Array

- Australia
- Canada
- China
- India
- Italy
- Netherlands
- New Zealand
- South Africa
- Sweden
- UK

Potential new members: Spain,
Portugal, Germany, France, others...

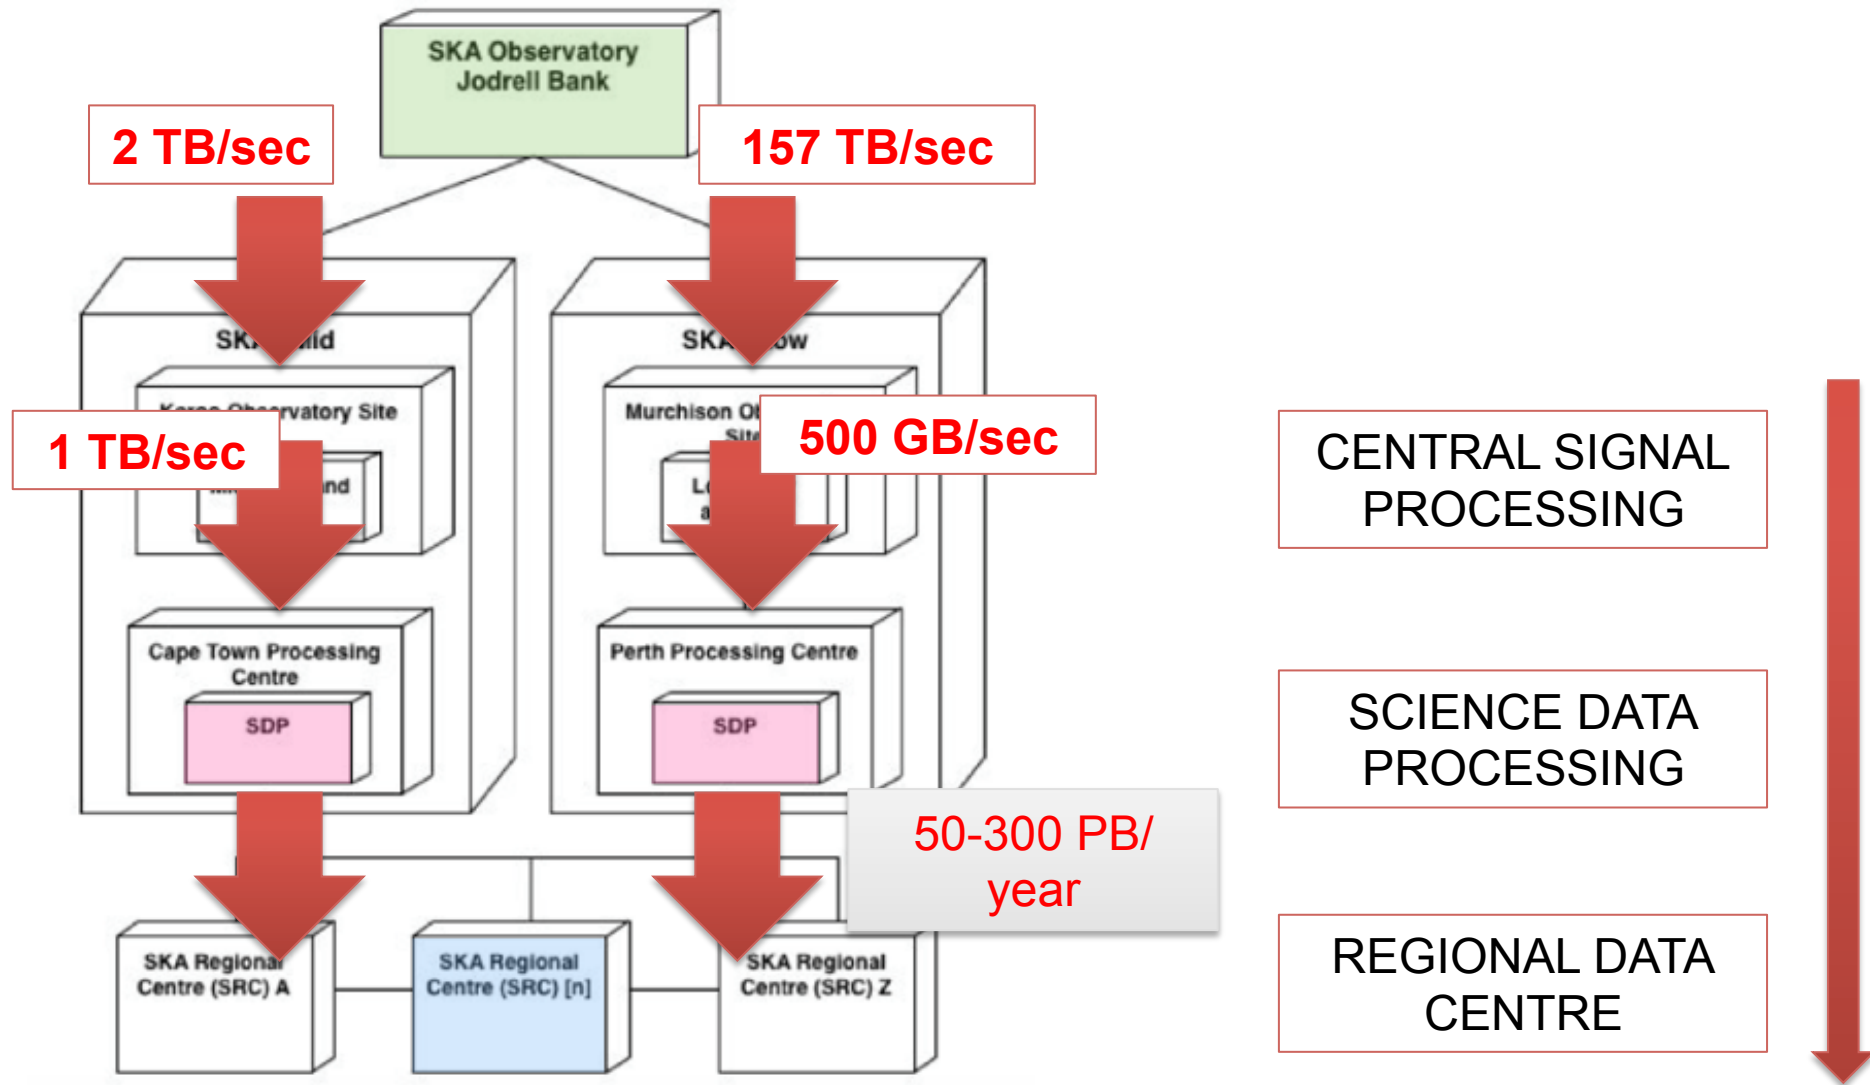

CENTRAL SIGNAL
PROCESSING

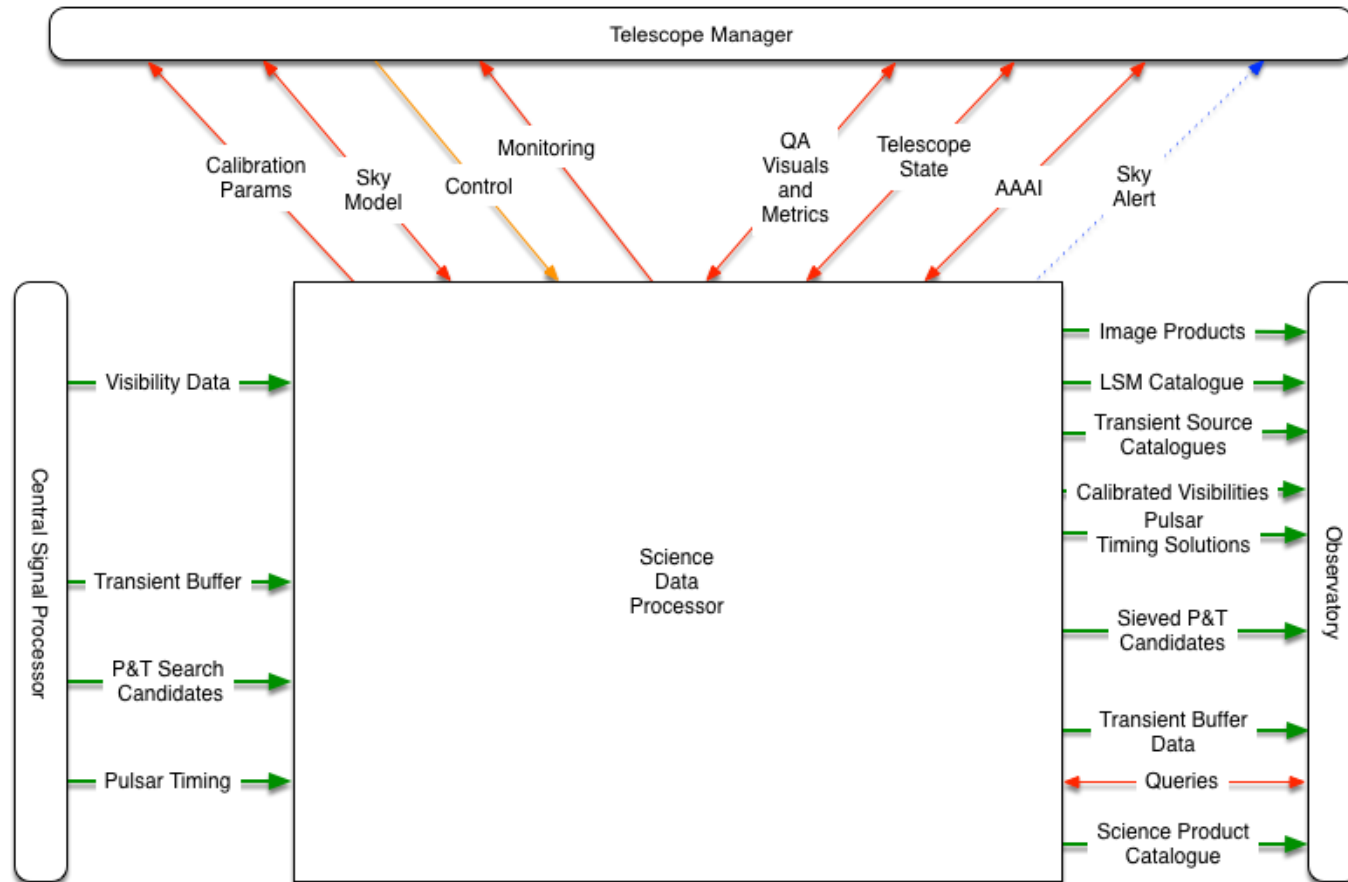

SCIENCE DATA
PROCESSING

REGIONAL DATA
CENTRE

SDP

SKA Regional Centres

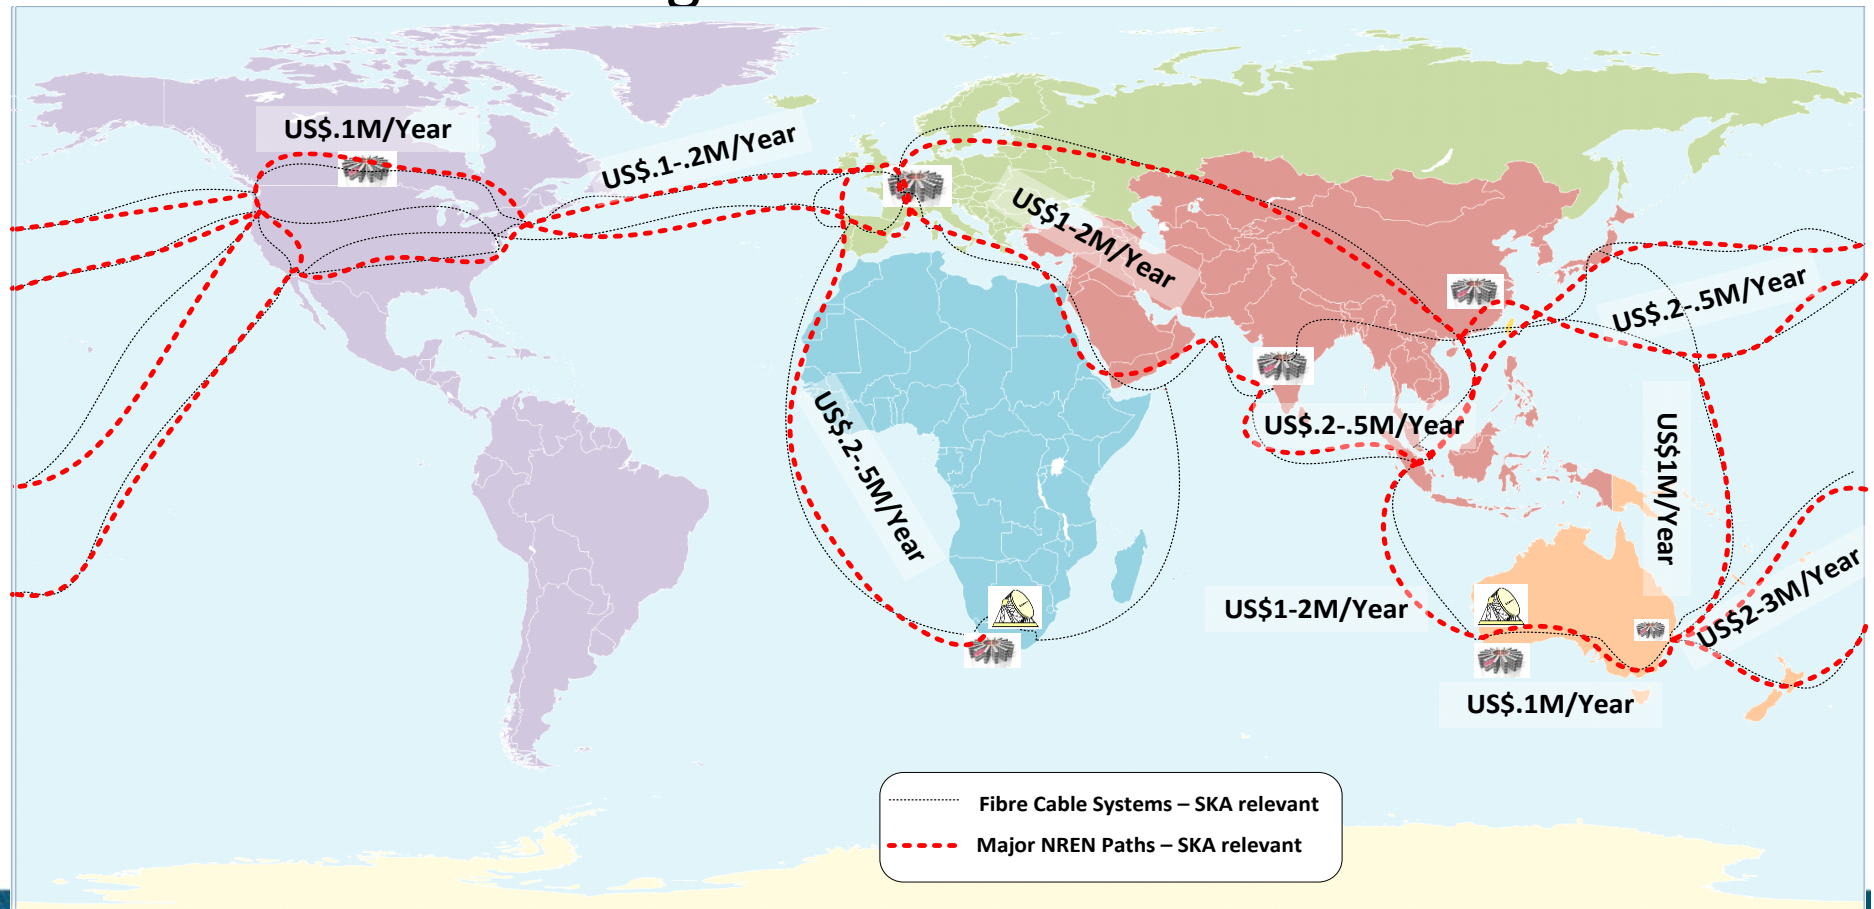

- Science Data Centres (SDCs) will likely host the SKA science archive
- Provide access and distribute data products to users
- Provide access to compute and storage resources for users
- Provide analysis capabilities
- Provide user support
- Multiple regional SRCs, locally resourced

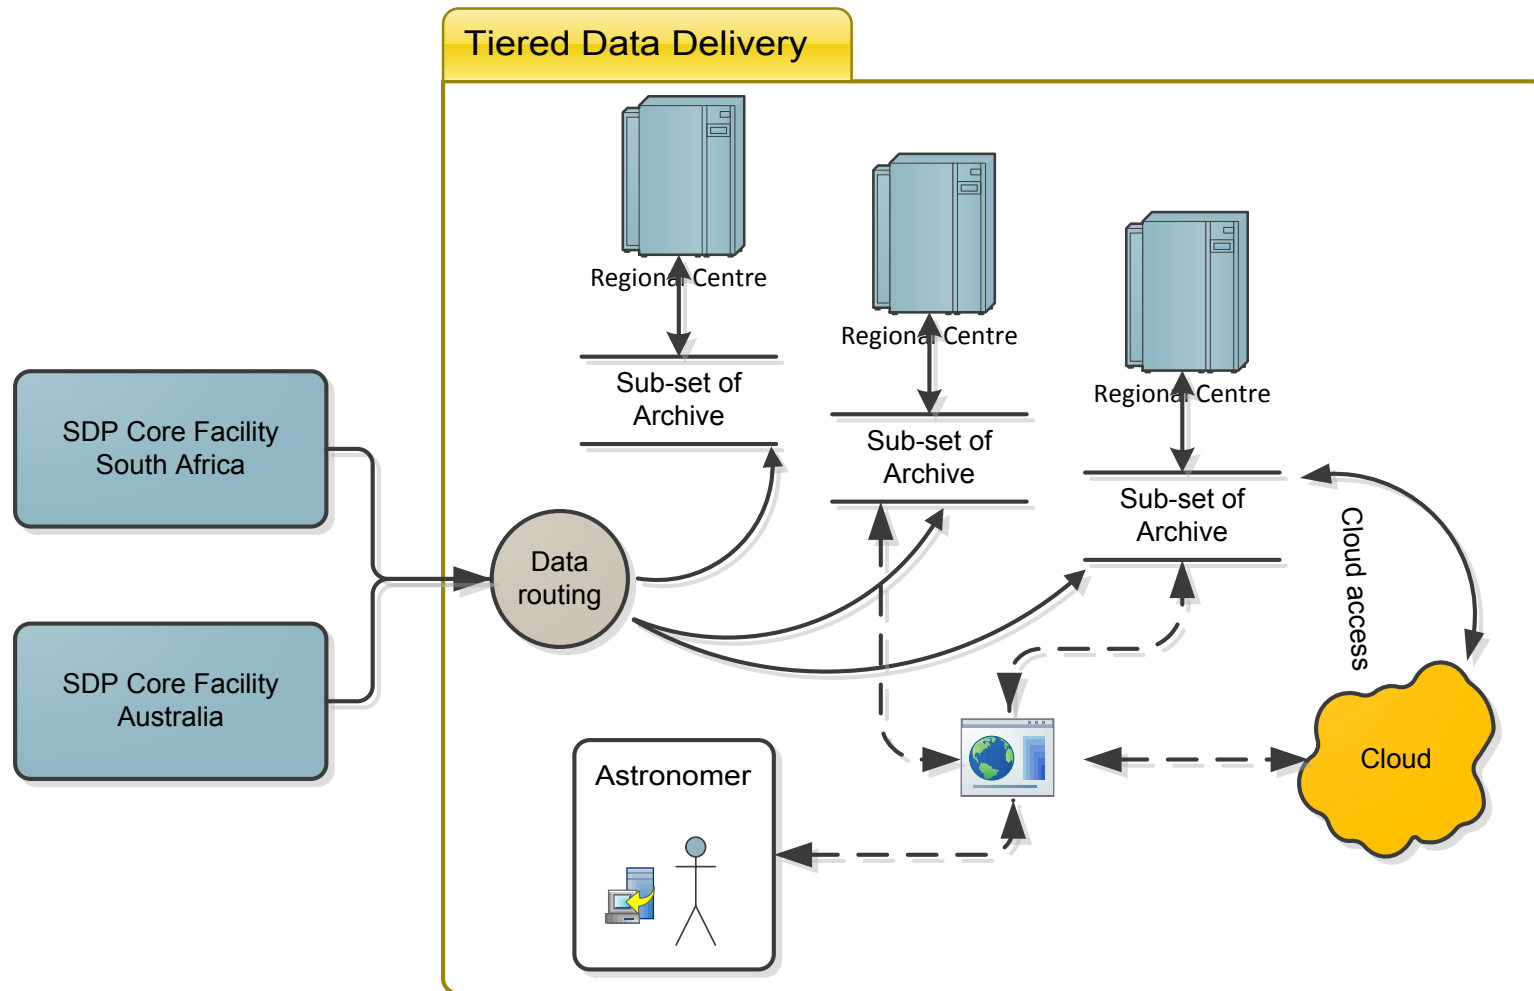

Key difference to LHC: SRCs are not subservient to the observatory. Their principal responsibility is to the Astronomy community

SRCs

- 10 year IRU per 100Gbit circuit 2024-2033 (2015 est.)
- Guesstimate of Regional Centre locations

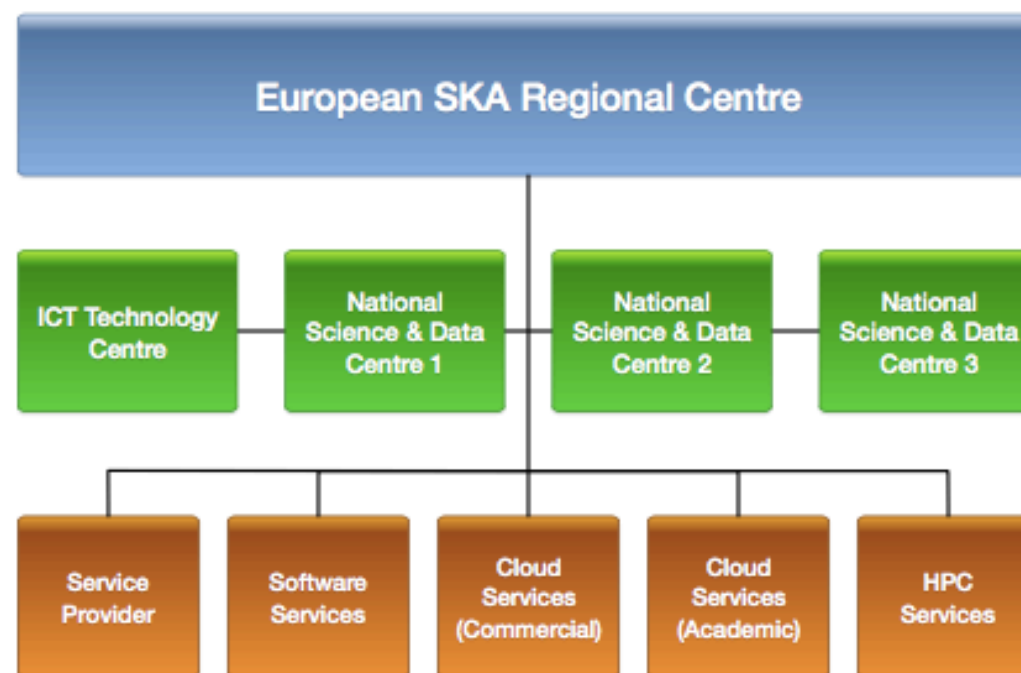

Data Flow

European SKA Regional Centre

- Create a European-scale, federated Regional Centre for the SKA
- Provide resources for SKA science extraction to users
- Coordination with ICT communities, industry, and service providers
- Facilitate shared development, interoperability, and innovation
- European counterpart for engagement with other SRCs internationally

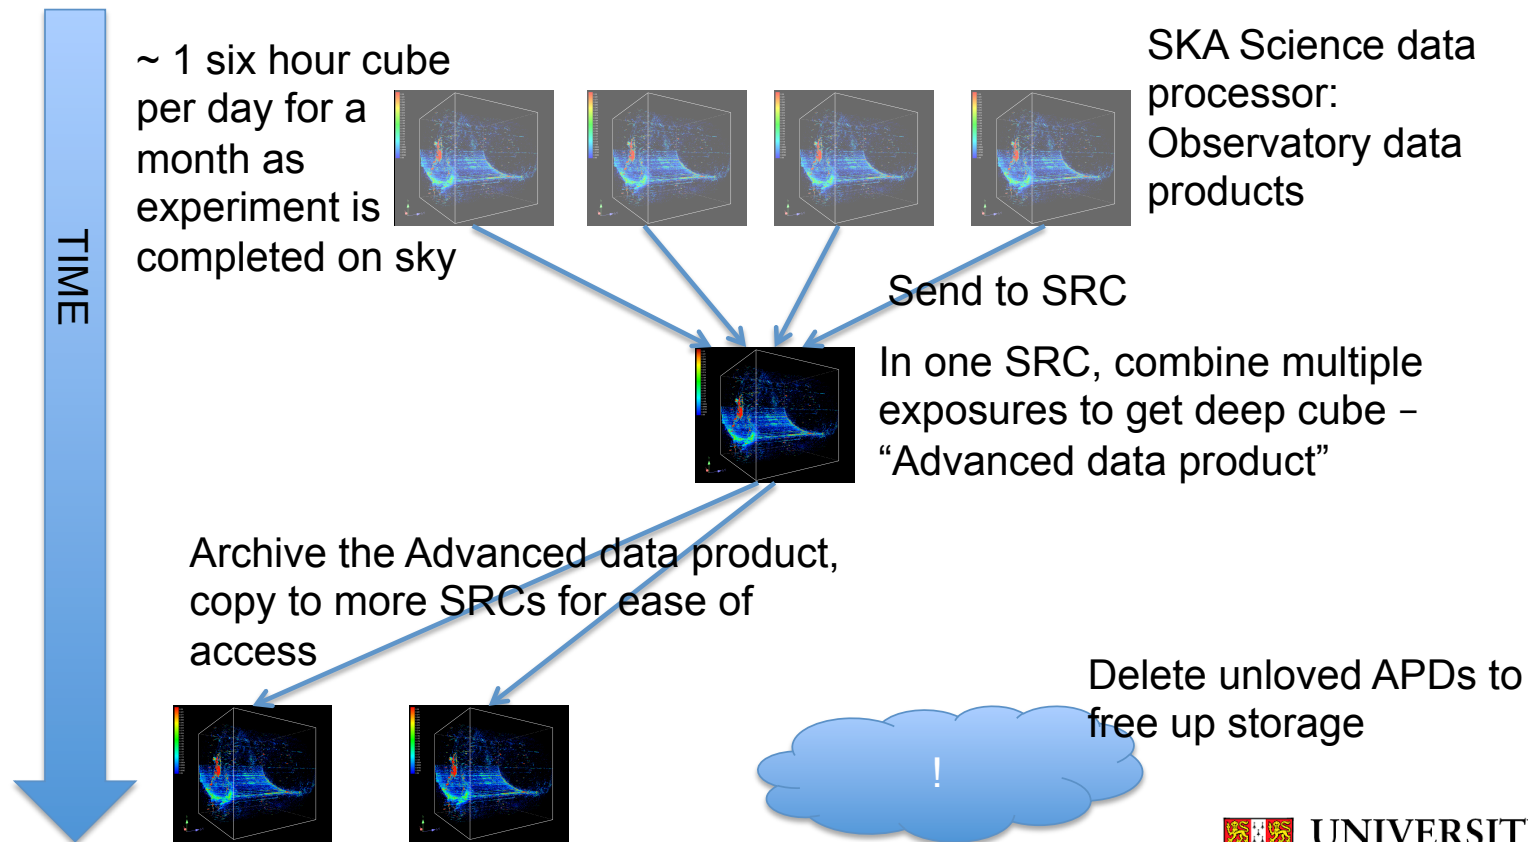

- Image cubes (2 spatial dimensions, plus radio spectral frequency, polarization)
 - Each can be huge, typically minutes-to-hours integrated together
 - High speed image plane searches

- Deep-cube: per 6 hours integration, $O(50k \times 50k)$ pixels, 50k channels, 4 polarisations: 5 Petabytes. 1.85 Tbits/s (20 x 100gbit/s links)
- Image plane searching: per 1 second, $O(5k \times 5k)$ pixels, 10 channels, 1 polarisation: each cube 25 Gbytes, 200 gbit/s

SKA Data

Regional Centre Functionality

Data Discovery

- Observation database
- Quick-look data products
- Flexible catalog queries
- Integration with VO tools
- Publish data to VO

Data Processing

- Reprocessing
- Calibration and imaging
- Source extraction
- Catalog (re-)creation
- DM searches

Data Mining

- Multi-wavelength studies
- Catalog cross-matching
- Transient classification
- Feature detection
- Visualization

SRC features

- The mode of operation for SKA, LSST, EUCLID will be different to previous Astronomy, where astronomer queries an archive and gets results back to their home to analyse.
- Queries will have huge output - you wont shift results back to Astronomer – and they probably wouldnt have compute capacity
- So query has to be analysed at SRC
- SRCs will have to have very high performance Data Bases close to compute power.
- Compute likely to be cloud (lots of talk of OpenStack at present)
- Maybe DBs will be virtualised ? this is not known yet

Boundary Conditions

- SKA Regional Centres must adhere to the data policies as defined by SKA
- SRCs must meet minimum requirements to join the network
- An accreditation process for SRCs in the network will be defined by SKAO
- SRCs will be heterogeneous in nature with common, core functionality
- Some SRCs may provide additional or community-specific functionality
- SRCs must support the Key Science Project Teams as well as general users
- Support for regional SRCs will come from the local communities

*Advanced European Network of E-infrastructures
for Astronomy with the SKA AENEAS - 731016*
