Measure $\sin 2\beta$ in time-dependent analysis: Interference of decay and mixing amplitudes

$$\lambda = \frac{q}{p} \cdot \frac{\bar{A}}{A} \quad \leftarrow \text{Amplitude ratio}$$

$$\lambda_{f_{CP}} \neq \pm 1 \Rightarrow \text{Pr ob}(\bar{B}_{\text{phys}}^0(t) \rightarrow f_{CP}) \neq \text{Pr ob}(B_{\text{phys}}^0(t) \rightarrow f_{CP}) \quad (\Delta\Gamma=0)$$

$$A_{f_{CP}}(t) = \frac{\Gamma(\bar{B}_{\text{phys}}^0(t) \rightarrow f_{CP}) - \Gamma(B_{\text{phys}}^0(t) \rightarrow f_{CP})}{\Gamma(\bar{B}_{\text{phys}}^0(t) \rightarrow f_{CP}) + \Gamma(B_{\text{phys}}^0(t) \rightarrow f_{CP})}$$

$$= C_{f_{CP}} \cdot \cos(\Delta m_{B_d} t) - S_{f_{CP}} \cdot \sin(\Delta m_{B_d} t)$$

$$C_{f_{CP}} = \frac{1 - |\lambda_{f_{CP}}|^2}{1 + |\lambda_{f_{CP}}|^2}$$

$$S_{f_{CP}} = \frac{-2 \text{Im} \lambda_{f_{CP}}}{1 + |\lambda_{f_{CP}}|^2}$$

For modes in this talk: SM expectation is $C=0, S=\pm \sin 2\beta$

CP Violation in B decay

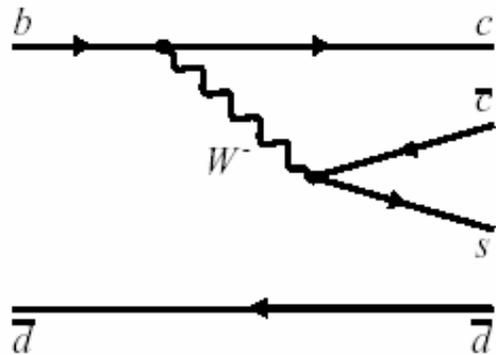

Belle	$\sin 2\phi_1 = 0.58_{-0.34}^{+0.32}(\text{stat.})_{-0.10}^{+0.09}(\text{syst})$
BaBar	$\sin 2\phi_1 = 0.34 \pm 0.20(\text{stat.}) \pm 0.05(\text{syst})$
CDF	$\sin 2\phi_1 = 0.79_{-0.44}^{+0.41}$
World Average	$\sin 2\phi_1 = 0.48 \pm 0.16$

It is my view that CP violation is established
in B meson decays

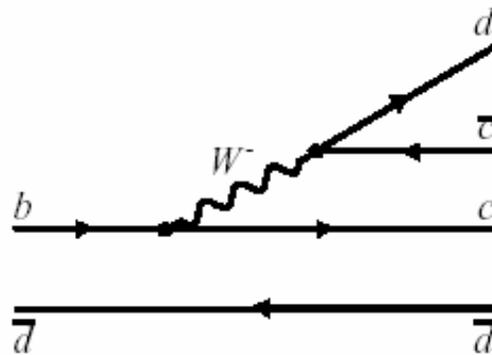

- 2001-2007:
1. Precision analysis of $\sin 2\beta$ in golden modes
 2. $\sin 2\beta$ in tree vs penguin modes
 3. Sign of $\cos 2\beta$

Several ways to measure $\sin 2\beta$

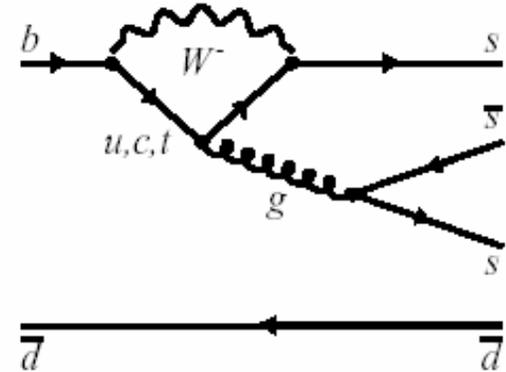

a) $b \rightarrow c\bar{c}s$
(charmonium)

b) $b \rightarrow c\bar{c}d$ charm
(and charmonium)

c) Penguin-dominated
 $b \rightarrow d\bar{d}s, b \rightarrow s\bar{s}s$

$J/\psi K_S^0, \psi(2S)K_S^0, \chi_{c1}K_S^0,$
 $\eta_c K_S^0, J/\psi K_L^0,$
 $J/\psi K^{*0} (K^{*0} \rightarrow K_S^0 \pi^0)$

$D^{*+}D^-, D^+D^-$
 $J/\psi \pi^0, D^{*+}D^{*-}$

$\phi K^0, K^+K^-K_S^0,$
 $K_S^0 K_S^0 K_S^0, \eta' K^0, K_S^0 \pi^0,$
 $\omega K_S^0, f_0(980)K_S^0$

CP Violation in $b \rightarrow c\bar{c}d$ decays: $B \rightarrow D^{(*)}D^{(*)}$

- TD asymmetry $\sim \sin 2\beta$: $B \rightarrow D^+D^-$: $C=0$, $S=-\sin 2\beta$
- Penguin contribution expected to be minimal
 - 2-10% [Phys.Rev.D61:014010,2000]
- Sensitive to new physics in loops

Conclusion: $\sin 2\beta$ measurements are precise tests of CKM picture of CP Violation

- Updated results on $\sin 2\beta$ in $B \rightarrow (c\bar{c})K$ and $B \rightarrow D^{(*)}D^-$ from BABAR.
 - Uncertainty on combined Belle+BABAR $\sin 2\beta$ from $B \rightarrow (c\bar{c})K$ now 4% (>900M BB total)
- $B \rightarrow D^+D^-$ puzzle. Evidence for CPV in $B \rightarrow D^*D$

- Ambiguity broken: $\cos 2\beta > 0$

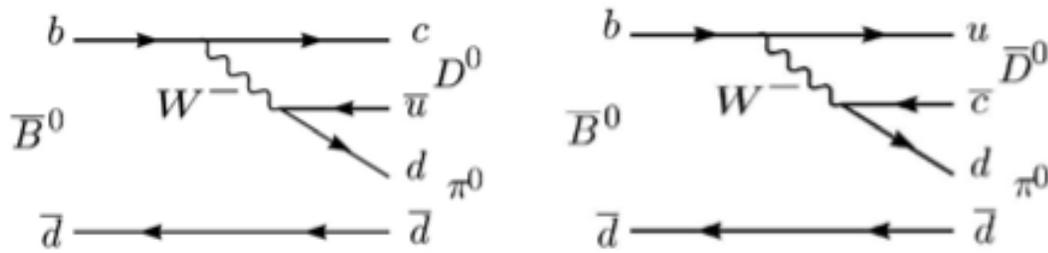

$$\beta = (21.3 \pm 1.0)^\circ$$

- Hints of difference between $\sin 2\beta$ in trees and penguins persists:

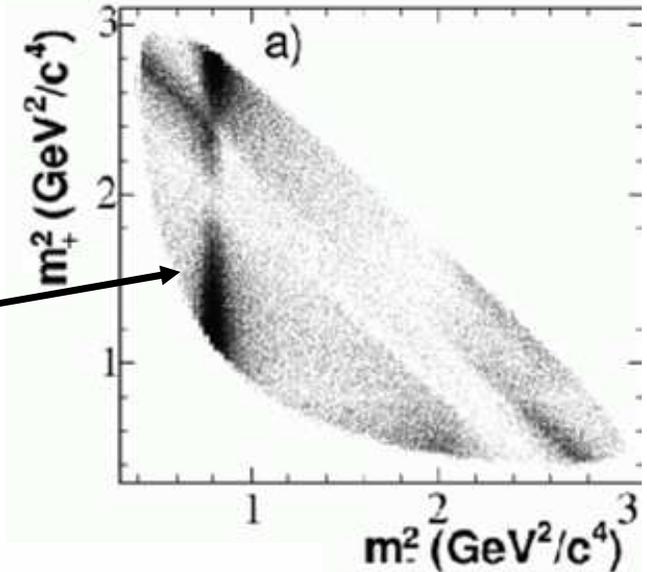

$$\Delta S = 0.15 \pm 0.05 \quad [\text{very naive average}]$$
