

A southern (eROSITA) DDF?

EDFS: Euclid Deep Field South (TBC)
1 eROSITA visit every ~2 weeks

eROSITA All-sky survey will revisit the area multiple times in the period 2019-2023

At final depth, expect ~500 Xray AGN deg^{-2}

MPE guaranteed time can be used to extend the baseline until >2026

4MOST dense spectroscopic follow-up on the LSST timescale possible

AGN variability across the Optical/UV/X-ray bands

Obscuration events, transition, changing look AGN, etc.

**A Continuous Viewing Zone (CVZ):
Unlimited visibility for satellites @L2 (eROSITA, Euclid, JWST, TESS)**
