

Interplay of quark and lepton flavour

[Ana Teixeira](#), [Justine Serrano](#)

We did not have time yet to build a real proposal, so just sharing some thoughts :

- The idea would be to have a workshop of 1 or 2 days beginning of 2018
- The goal is more to do a 'kick-off' of the WG so that people know each other and share ideas. More topical meeting will follow afterwards.
- Idea of schedule: one afternoon with presentations summarizing the state of the art on the experimental side and theory side, one morning with contributions from people that want to present their work and discuss new ideas. Could also have a 'hands on' session.
- Ana will get in touch with D. Duchesneau to see if there is interest from the GDR neutrino to do a join workshop
