B-anomalies: A Model Builder's Guide

dimanche 11 mars 2018 11:05 (15 minutes)

In my talk, I will try to address three questions:

- (1) From a model builder's perspective, why does it make sense to consider the common origin of the neutral and charged current B-anomalies?
- (2) Where is the new mass scale and what are the main model building blocks?
- (3) Which are the most relevant non-observations to be tackled by a successful model?
