## Electroweak measurements at the Tevatron

*lundi 12 mars 2018 10:35 (15 minutes)*

I will summarize Tevatron electroweak measurements, with a focus on the recent D0 and CDF combination of the forward-backward asymmetry of leptons from Z boson production and decay. I will also touch on the latest and ongoing measurements of the W boson mass and of the charge asymmetry in its leptonic decays.

### Summary
