

Measurement of fiducial, differential and production cross sections in the H → γγ decay channel with ATLAS

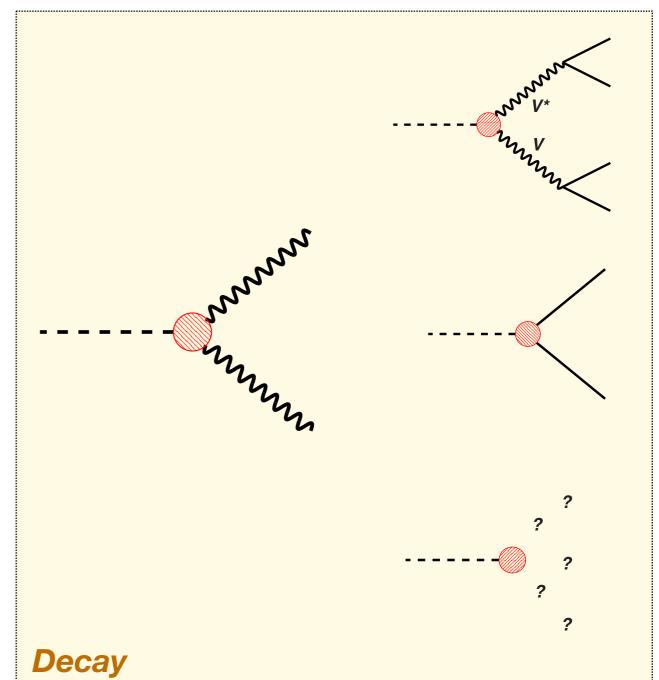

(Young Scientists Forum)

Stephen Menary
University of Manchester
On behalf of the ATLAS Collaboration

Introduction

Aim: measure pp \rightarrow H \rightarrow X properties

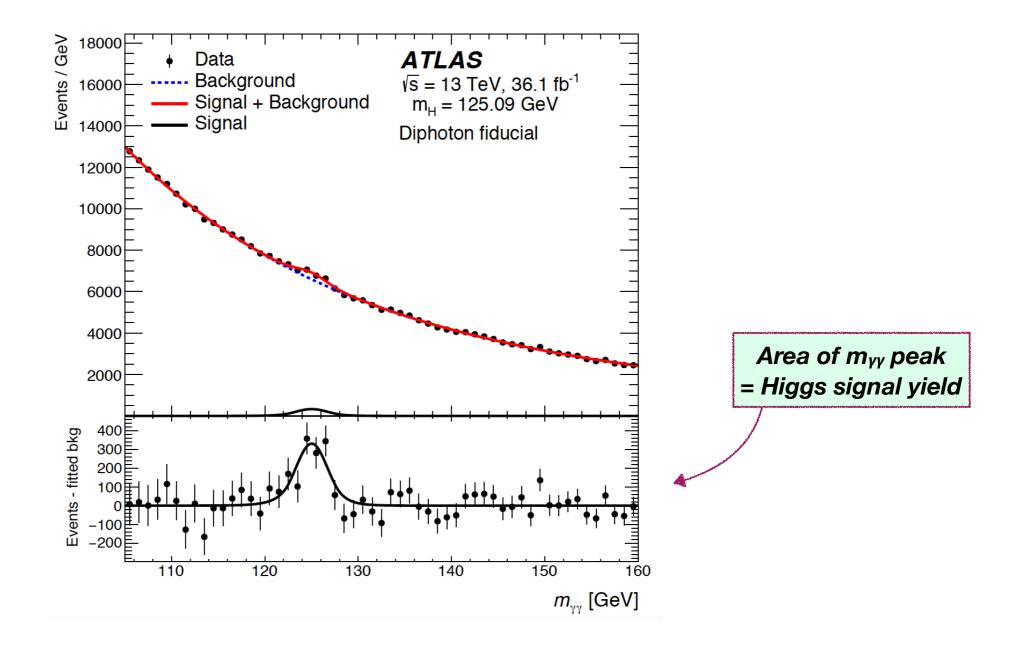

Introduction

Aim: measure pp \rightarrow H \rightarrow X properties

Tools: γγ channel (0.2% BR but good efficiency/resolution); 36 fb⁻¹ of 13 TeV data

Introduction

Aim: measure pp \rightarrow H \rightarrow X properties

Tools: γγ channel (0.2% BR but good efficiency/resolution); 36 fb⁻¹ of 13 TeV data

Method: range of most ↔ least model dependent measurements

Direct test of SM

Couplings: μ ggH, μ VBF, κ g, κ γ etc

Simplified Template Cross Sections (STXS) σ prod (kinematic region) \times BR(H $\rightarrow\gamma\gamma$)

Fiducial: o (final-state phase space, differential)

Model independence

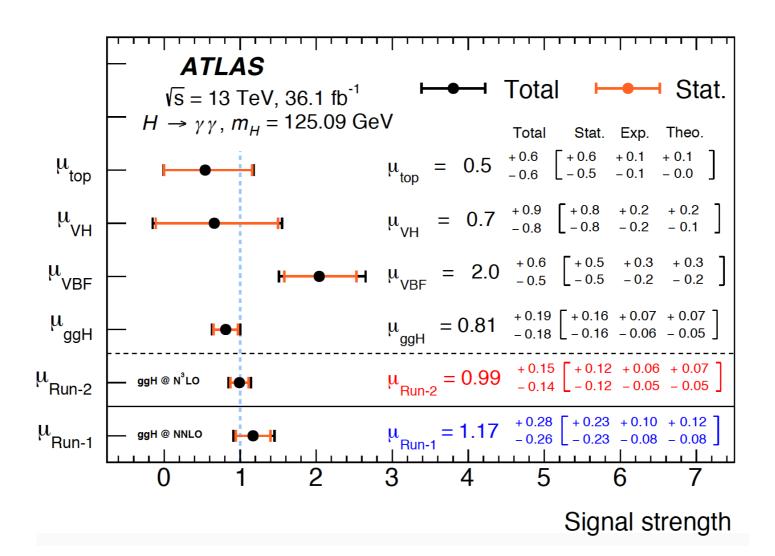

arXiv:1802.04146

Inspire/1654582

1. Couplings

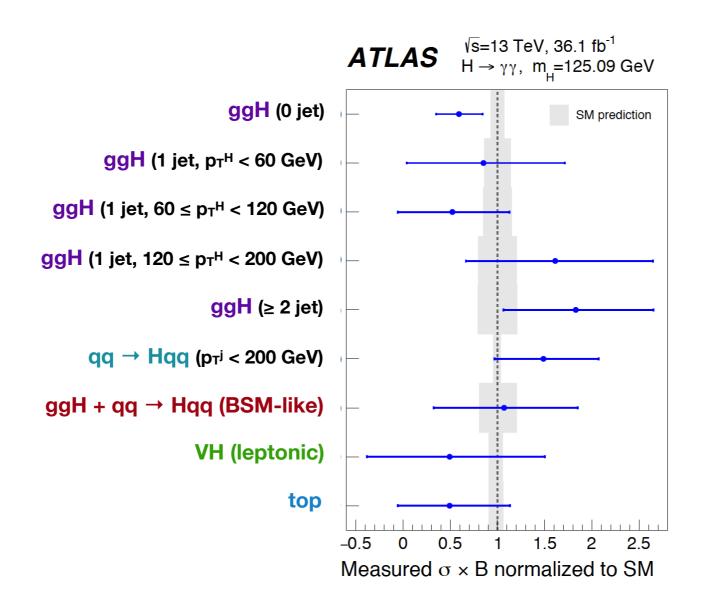

Likelihood fit to $m_{\gamma\gamma}$ in 31 object based categories using SM templates

$$\mu^{\text{prod}} \equiv \frac{\sigma^{\text{prod}}}{\sigma_{\text{SM}}^{\text{prod}}} , \quad \mathcal{BR} \times \sigma_{|y^{\text{H}}| < 2.5}^{\text{prod}} , \quad \frac{\sigma_{|y^{\text{H}}| < 2.5}^{\text{prod}}}{\sigma_{|y^{\text{H}}| < 2.5}^{\text{ggH}}} , \quad \frac{\mu^{\text{prod}}}{\mu^{\text{ggH}}} , \quad \kappa_{g,\gamma,F,V,g\gamma} , \quad \frac{\kappa_{V,t}}{\kappa_{g}}$$

2. Simplified Template Cross Sections (STXS)

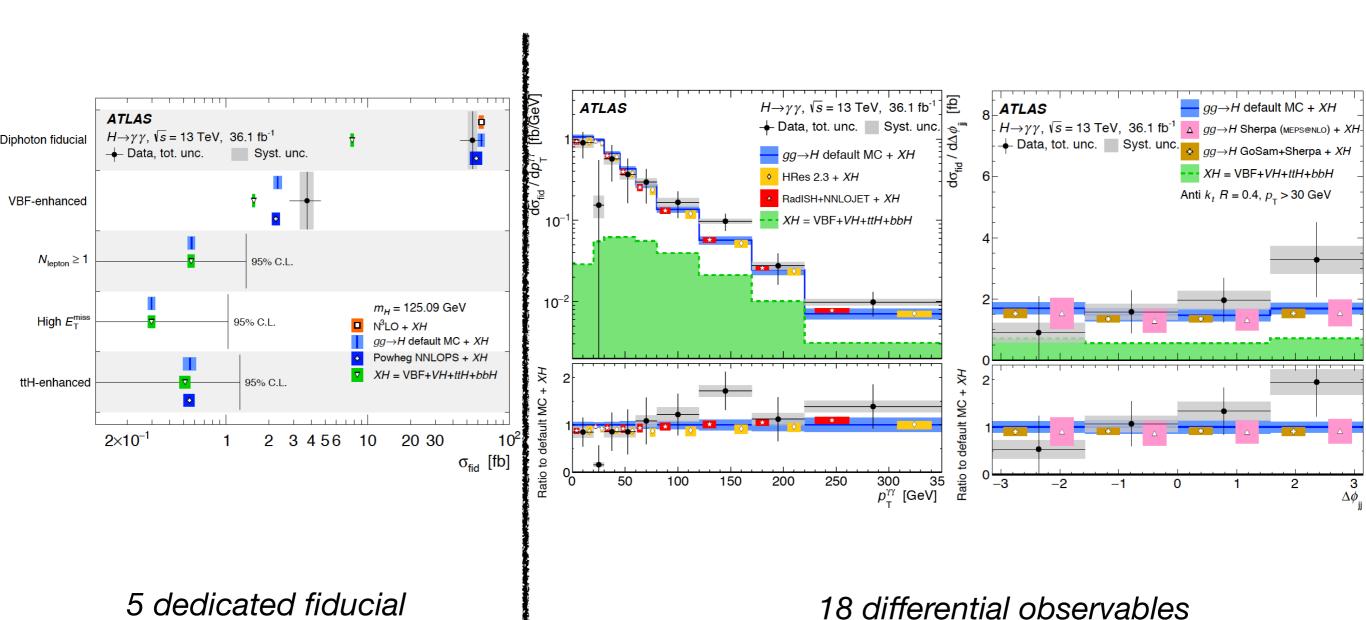

Production mode x-sections in simplified fiducial phase spaces

Fewer assumptions, specific phase space regions, easy to combine decay channels

3. Fiducial & Differential Cross Sections

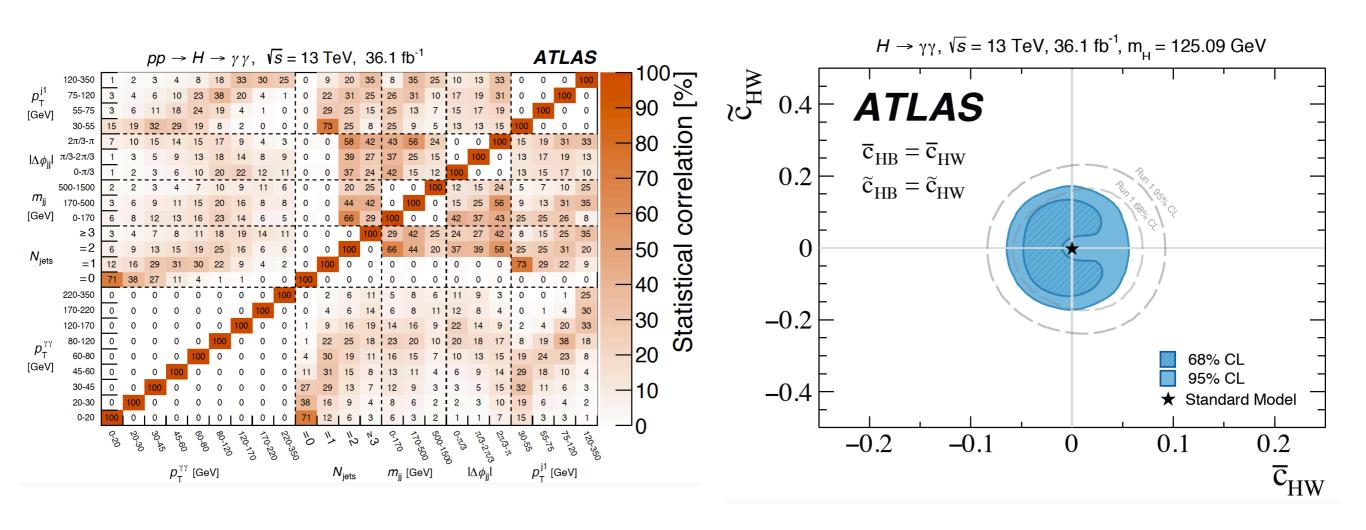

Fiducial / differential x-sections defined by final state objects, corrected for detector effects with minimum SM assumptions

phase spaces

4. Effective Field Theory

Constrain effective dimension 6 couplings using differential measurements

Provide correlations to allow after-the-fact constraint of models using multiple distributions

Scan of **CP-even/odd** H V V **Wilson coefficients**

Summary

- \bullet H \rightarrow $\gamma\gamma$ measurements targeting a range of model dependence and SM sensitivity
 - Couplings: model dependent measurement of SM rates / kappas
 - STXS: SM x-sections in simplified fiducial phase spaces, easily combined
 - Fiducial x-sections: minimal model dependence, differential, re-interpretable
 - **EFT interpretation**: limits on dimension 6 effective vertex strengths
- Stat dominated, no clear deviations from the SM

arXiv:1802.04146

Fiducial Cross Sections

Table 14: Summary of the particle-level definitions of the five fiducial integrated regions described in the text. The photon isolation $p_{\rm T}^{\rm iso,0.2}$ is defined analogously to the reconstructed-level track isolation as the transverse momentum of the system of charged particles within $\Delta R < 0.2$ of the photon.

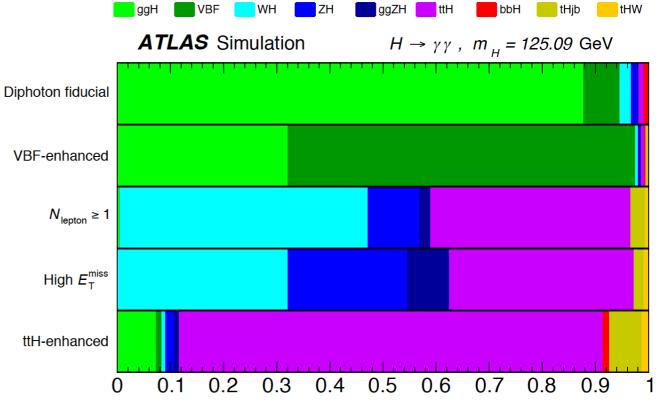

Objects	Definition
Photons	$ \eta < 1.37 \text{ or } 1.52 < \eta < 2.37, \ p_{\rm T}^{\rm iso,0.2}/p_{\rm T}^{\gamma} < 0.05$
Jets	anti- k_t , $R = 0.4$, $p_T > 30 \text{GeV}$, $ y < 4.4$
Leptons, ℓ	<i>e</i> or μ , $p_{\rm T} > 15$ GeV, $ \eta < 2.47$ for <i>e</i> (excluding 1.37 < $ \eta < 1.52$) and $ \eta < 2.7$ for μ
Fiducial region	Definition
Diphoton fiducial	$N_{\gamma} \ge 2$, $p_{\rm T}^{\gamma_1} > 0.35 m_{\gamma\gamma} = 43.8 {\rm GeV}$, $p_{\rm T}^{\gamma_2} > 0.25 m_{\gamma\gamma} = 31.3 {\rm GeV}$
VBF-enhanced	Diphoton fiducial, $N_j \ge 2$ with $p_T^{\text{jet}} > 25$ GeV,
	$m_{jj} > 400 \text{ GeV}, \ \Delta y_{jj} > 2.8, \ \Delta \phi_{\gamma\gamma,jj} > 2.6$
$N_{\text{lepton}} \ge 1$	Diphoton fiducial, $N_{\ell} \ge 1$
High $E_{ m T}^{ m miss}$	Diphoton fiducial, $E_{\rm T}^{\rm miss} > 80 \text{ GeV}, \ p_{\rm T}^{\gamma\gamma} > 80 \text{ GeV}$
<i>tīH</i> -enhanced	Diphoton fiducial, $(N_j \ge 4, N_{b-jets} \ge 1)$ or $(N_j \ge 3, N_{b-jets} \ge 1, N_{\ell} \ge 1)$

Fiducial region	Measured cross section	SM prediction		
Diphoton fiducial	$55 \pm 9 \text{ (stat.)} \pm 4 \text{ (exp.)} \pm 0.1 \text{ (theo.) fb}$	$64 \pm 2 \text{fb}$	$[N^3LO + XH]$	
VBF-enhanced	$3.7 \pm 0.8 \text{ (stat.)} \pm 0.5 \text{ (exp.)} \pm 0.2 \text{ (theo.)} \text{ fb}$	$2.3 \pm 0.1 \text{fb}$	[default MC + XH]	
$N_{\text{lepton}} \ge 1$	$\leq 1.39 \text{ fb } 95\% \text{ CL}$	$0.57 \pm 0.03 \text{ fb}$	[default MC + XH]	
High $E_{\mathrm{T}}^{\mathrm{miss}}$	$\leq 1.00 \text{ fb } 95\% \text{ CL}$	$0.30 \pm 0.02 \text{ fb}$	[default MC + XH]	
$t\bar{t}H$ -enhanced	≤ 1.27 fb 95% CL	$0.55 \pm 0.06 \text{ fb}$	[default MC + XH]	

Fiducial Cross Sections

Fraction of Signal Process / Fiducial Region (after reconstruction)

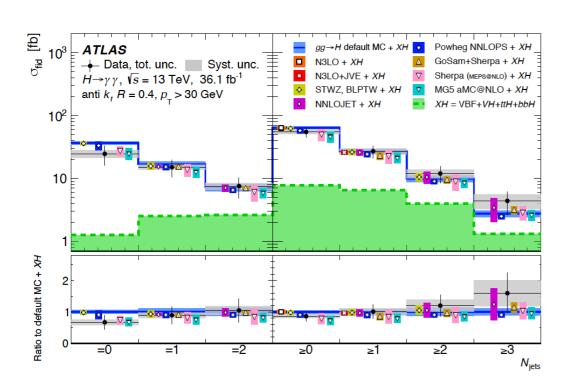

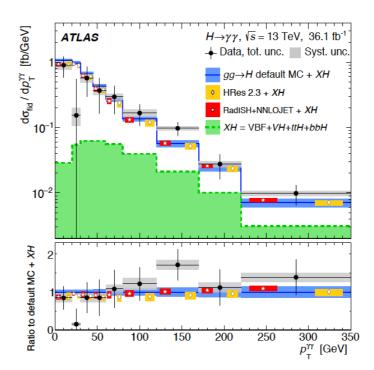

Fraction of Signal Process / Fiducial Region (particle level)

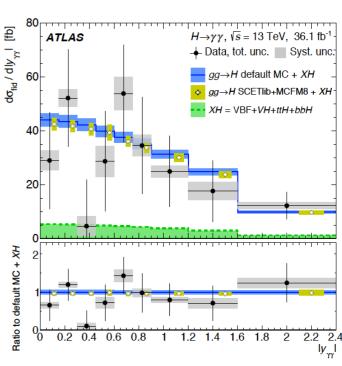

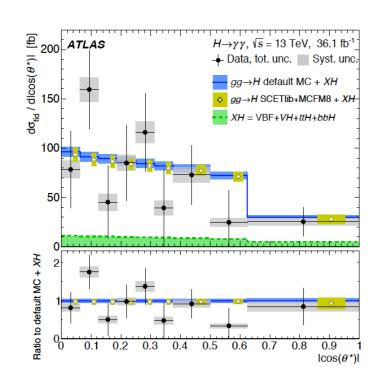

Differential Cross Sections

EFT: overview

$$\mathcal{L}_{\text{eff}} = \frac{\bar{c}_g O_g + \bar{c}_{HW} O_{HW} + \bar{c}_{HB} O_{HB}}{+ \tilde{c}_g \tilde{O}_g + \tilde{c}_{HW} \tilde{O}_{HW} + \tilde{c}_{HB} \tilde{O}_{HB}}$$

O_{HB} —> HZZ, HZY

Additional effective CP-even and CP-odd

dimension 6 operators in SILH basis

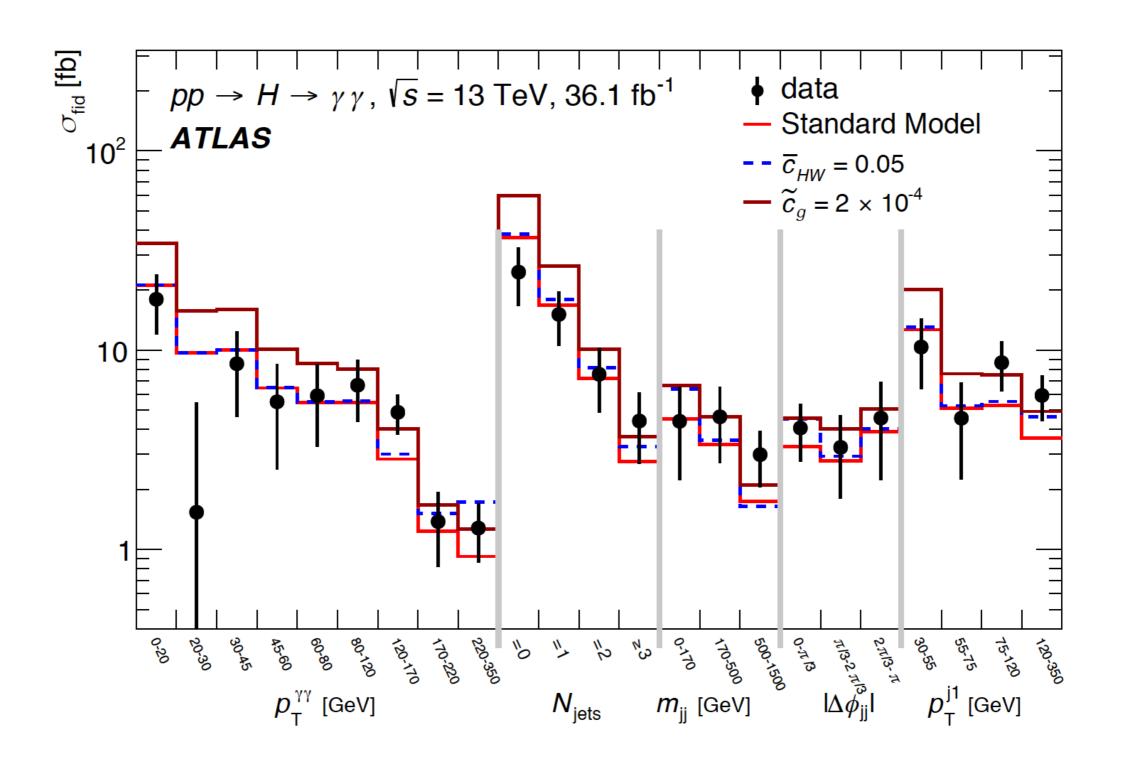

Operators are modulated by c_i and modify rate + shape of differential distributions

Construct templates for different c_i with FeynRules+MadGraph+Pythia8+Rivet and interpolate with Professor

Constrain c_i by maximising likelihood

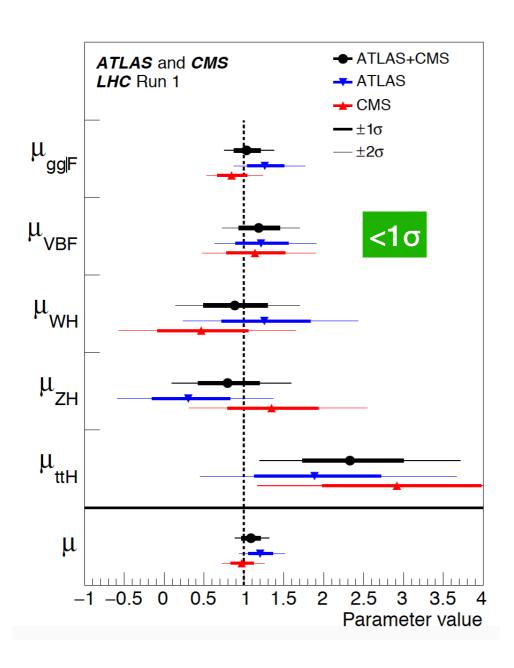

$$\mathcal{L} = \frac{1}{\sqrt{(2\pi)^k |C|}} \exp\left(-\frac{1}{2} \left(\vec{\sigma}_{\text{data}} - \vec{\sigma}_{\text{pred}}\right)^T C^{-1} \left(\vec{\sigma}_{\text{data}} - \vec{\sigma}_{\text{pred}}\right)\right)$$

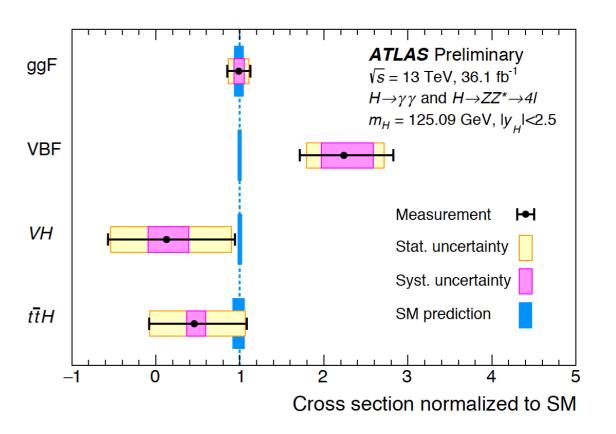

EFT: 1D scans

Coefficient	Observed 95% CL limit	Expected 95% CL limit
\bar{c}_g	$[-0.8, 0.1] \times 10^{-4} \cup [-4.6, -3.8] \times 10^{-4}$	$[-0.4, 0.5] \times 10^{-4} \cup [-4.9, -4.1] \times 10^{-4}$
$ ilde{c}_g$	$[-1.0, 0.9] \times 10^{-4}$	$[-1.4, 1.3] \times 10^{-4}$
$ar{c}_{HW}$	$[-5.7, 5.1] \times 10^{-2}$	$[-5.0, 5.0] \times 10^{-2}$
$ ilde{c}_{HW}$	[-0.16, 0.16]	[-0.14, 0.14]
