## PMT Characterisation for the KM3NeT Project

*mardi 4 mai 2010 10:15 (1 minute)*

The KM3NeT project aims to design and to construct at least a cubic kilometre scale neutrino telescope in the Mediterranean Sea. The main task is to instrument this deep-sea water volume with optical modules, each housing one or several photomultiplier tubes (PMTs).

3-, 8- and 10-inch PMTs from ET Enterprises, Hamamatsu and MELZ-FEU have been investigated as candidates for the telescope's optical modules. Various parameters of these photomultiplier tubes have been measured in a test bench at the Erlangen Centre for Astroparticle Physics. These results are presented.

**Please indicate "poster" or "plenary" session. Final decision will be made by session coordinators.**

Poster

**Auteur principal:** Dr KALEKIN, Oleg (Erlangen Centre for Astroparticle Physics)

**Orateur:** Dr KALEKIN, Oleg (Erlangen Centre for Astroparticle Physics)

**Classification de Session:** Poster Session 1 (Summary)

**Classification de thématique:** Cherenkov detectors in astroparticle physics
