Atmospheric transparency measurement on Telescope Array site by the central laser facility

mardi 9 octobre 2018 16:16 (4 minutes)

The TA experiment has three FD stations these containing 38 FDs.

In addition, 16 FD was newly added by TA_{x4} and TALE.

In order to reconstruct FD observation data to air shower information, it is necessary to calibrate the influence of aerosol attenuation. CLF measures atmospheric transparency of TA site.

Auteurs principaux: M. UEHAMA, Takafumi (Shinshu University); Dr TOMIDA, Takayuki (Shinshu University)

Co-auteurs: Dr UDO, Shigeharu (Kanagawa University); Prof. SAITOH, Yasunori (Shinshu University)

Orateurs: Dr TOMIDA, Takayuki (Shinshu University); FOR THE TELESCOPE ARRAY COLLABORATION

Classification de Session: POSTER SESSION
