

Test Bench status

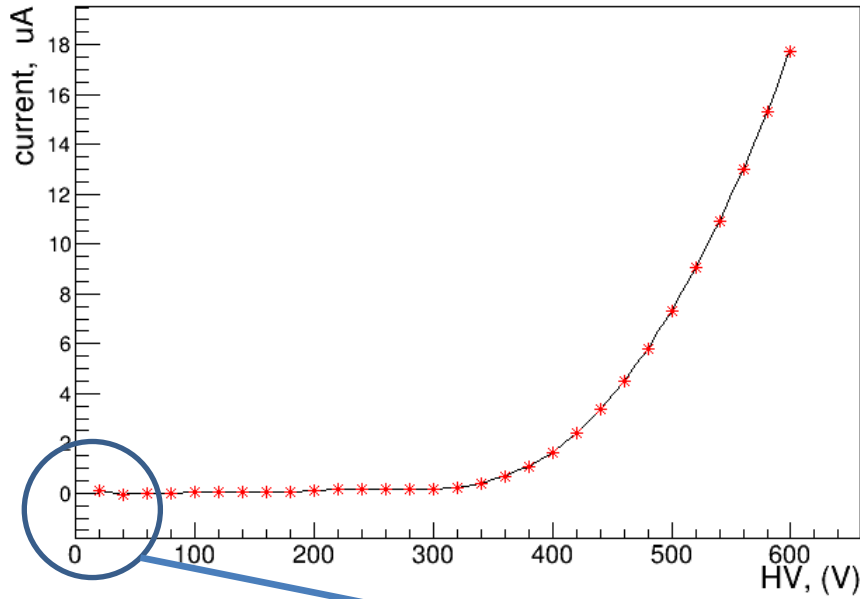

22.02.2018

Vladimir, Ulrich, Christian

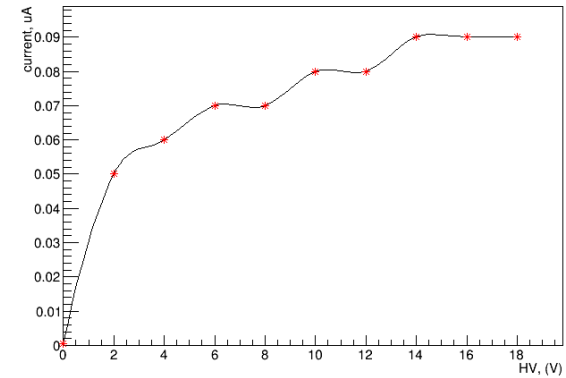

HV - Current

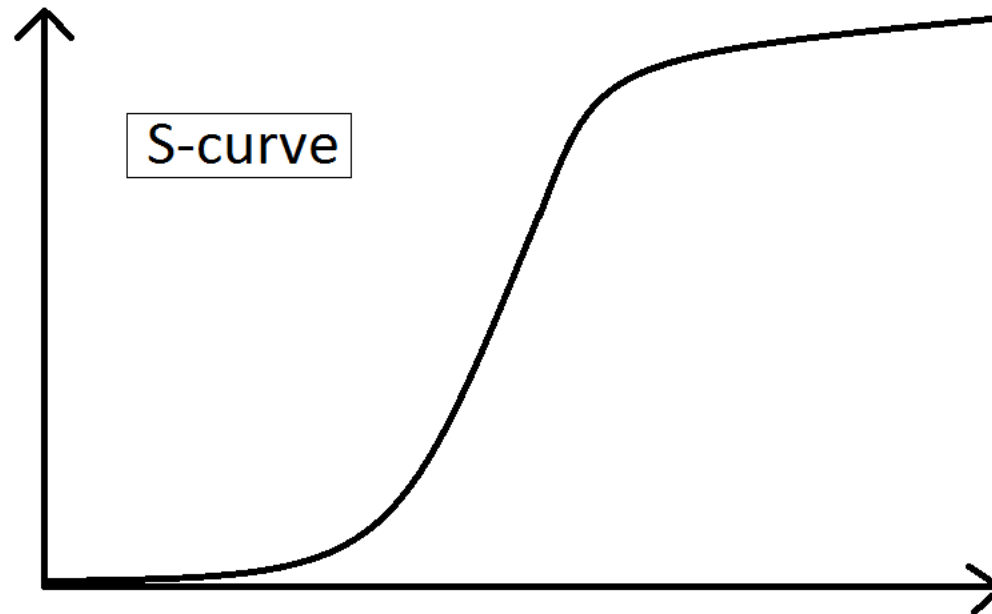

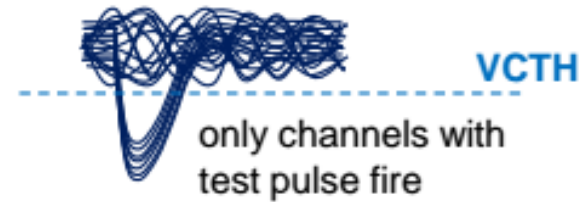

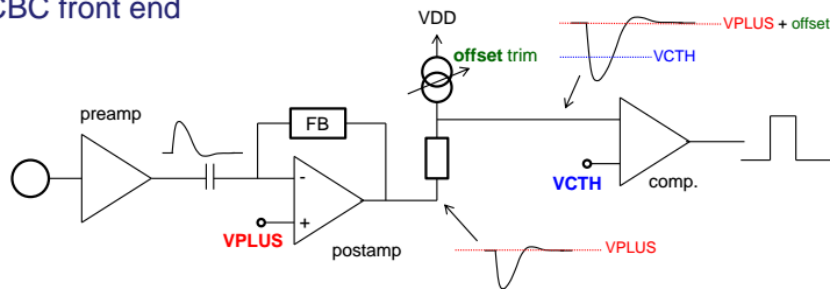

The HV on the detector vs
current as in literature

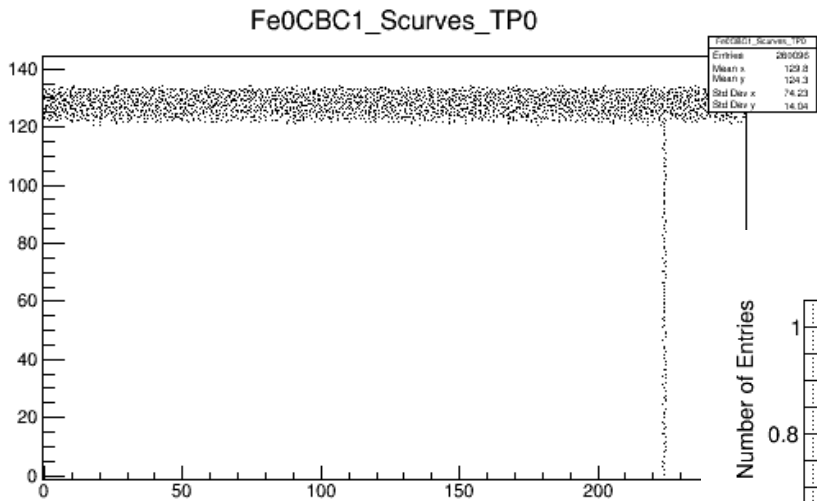

CBC calibration + channels offset

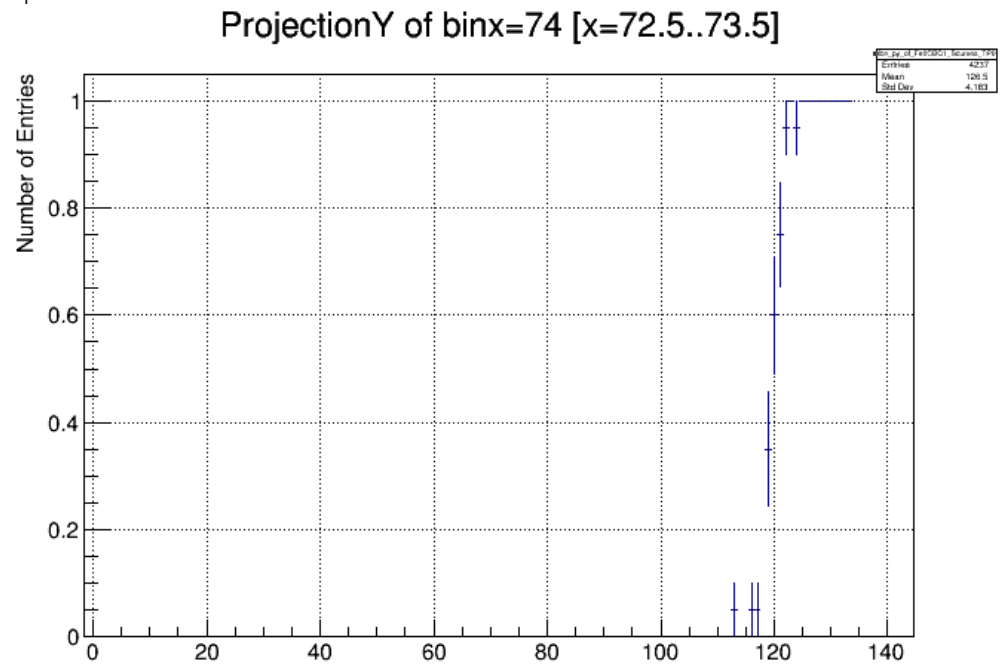

CBC front end

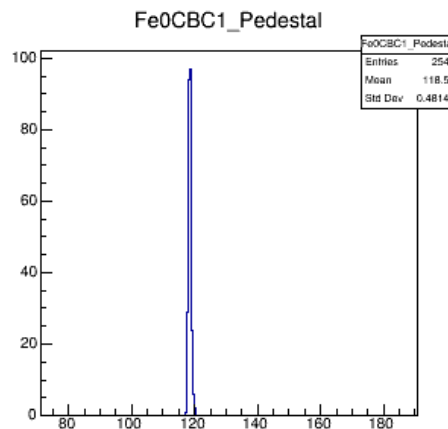

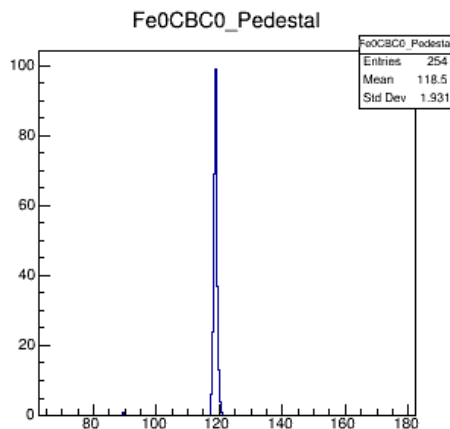

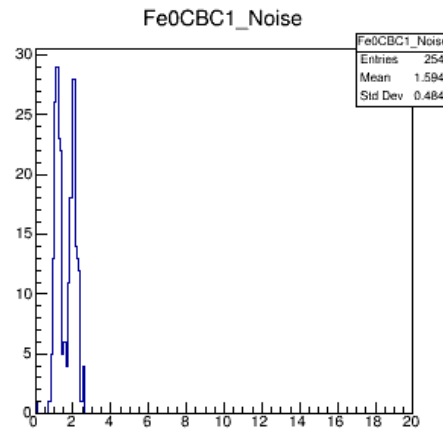

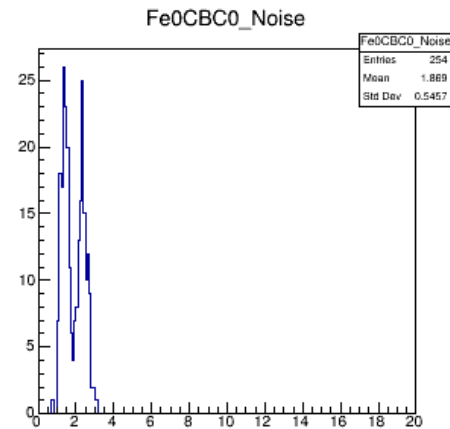

Noise calibration (S-Curves)

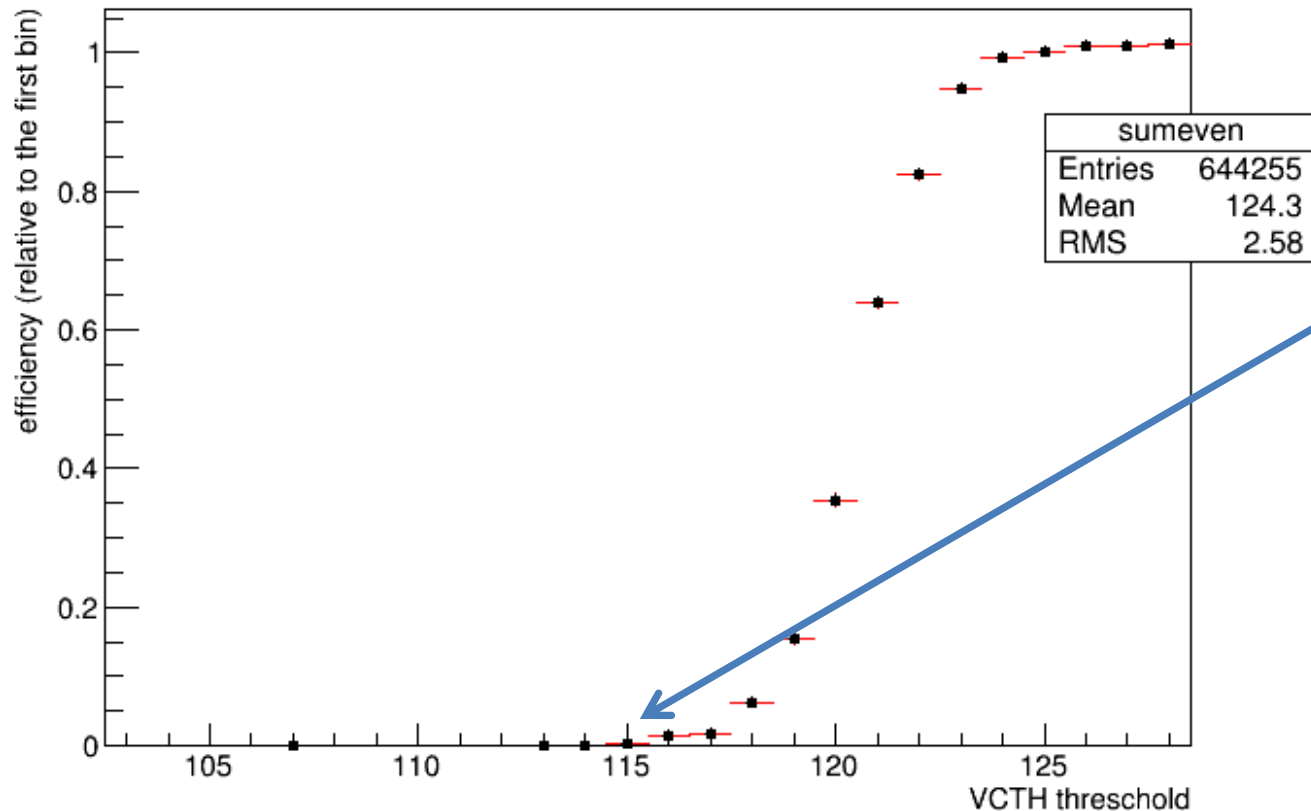

Noise VCTH scan

- Noise – is a width of s-curve at the mid-point (Gaussian sigma)
- Pedestal - is a given VCTH threshold w.r.t you perform channels calibration

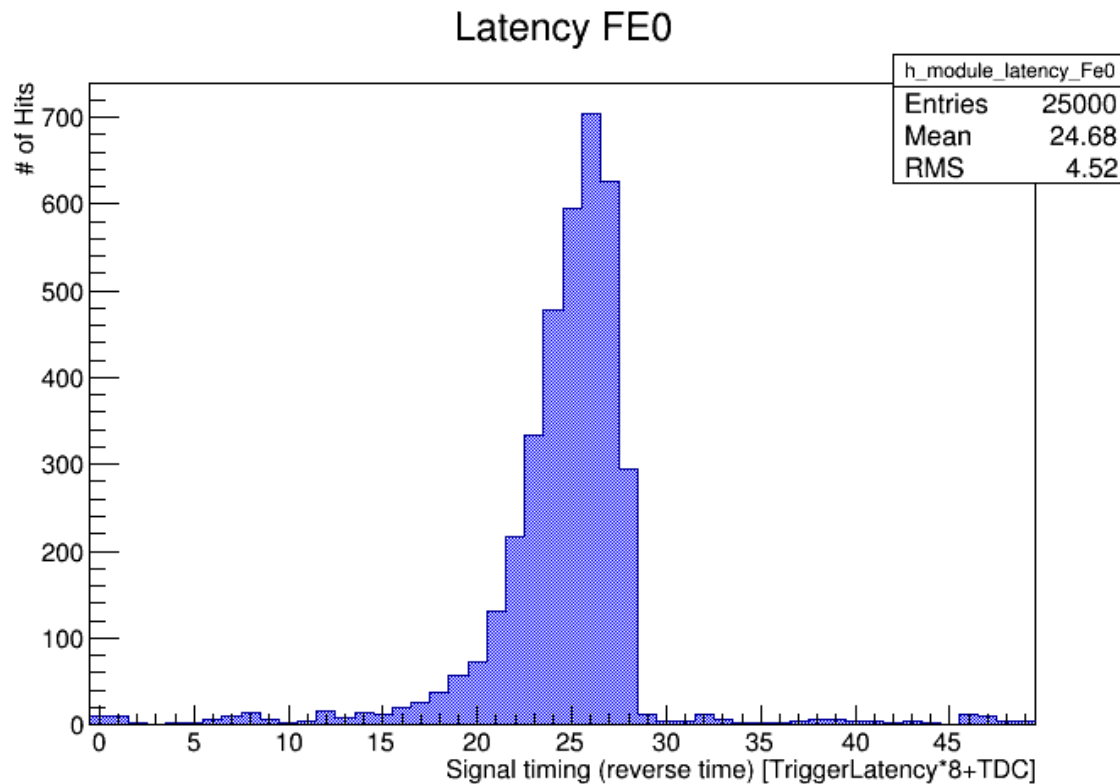

Noise S-curve for all channels

Suppressed
to 0 at VCTH
= 115

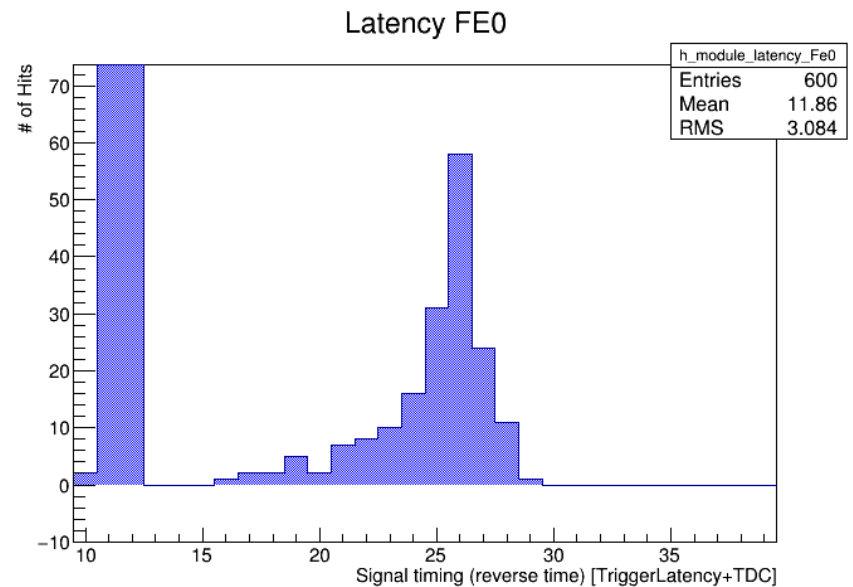

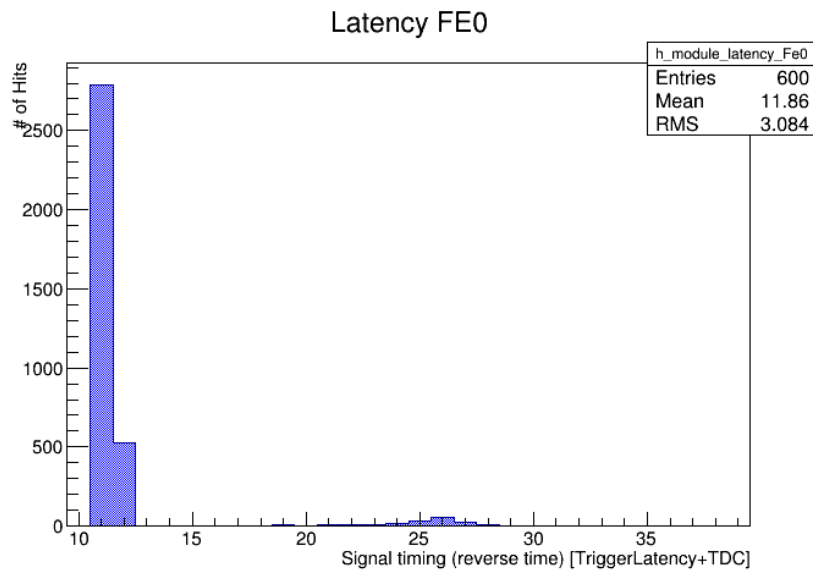

Trigger latency scan with high rate source

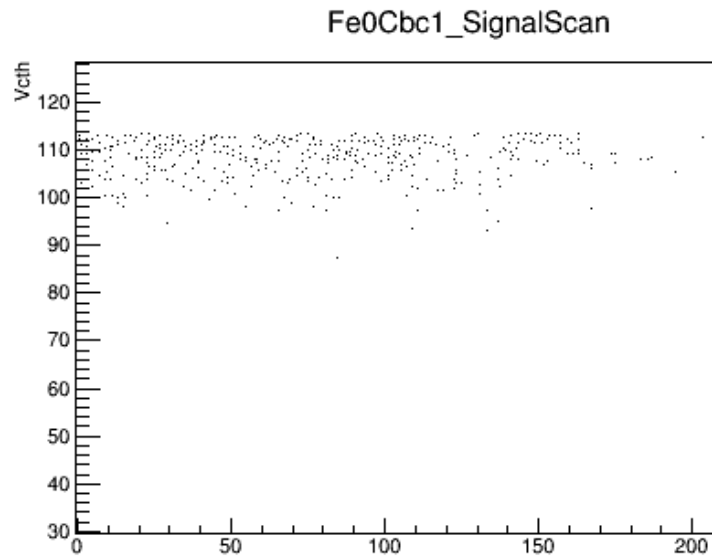

- Width and shape is not completely clear

Latency scan with cosmics (low rate)

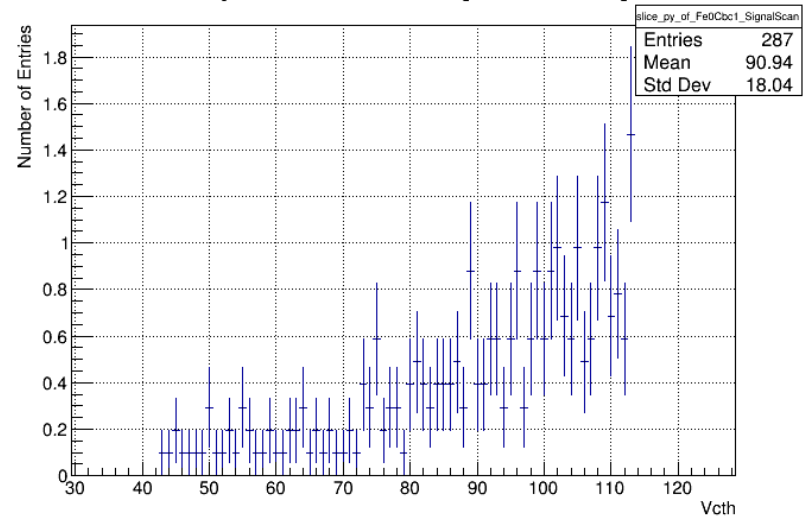

Signal Scan with largest latency bin

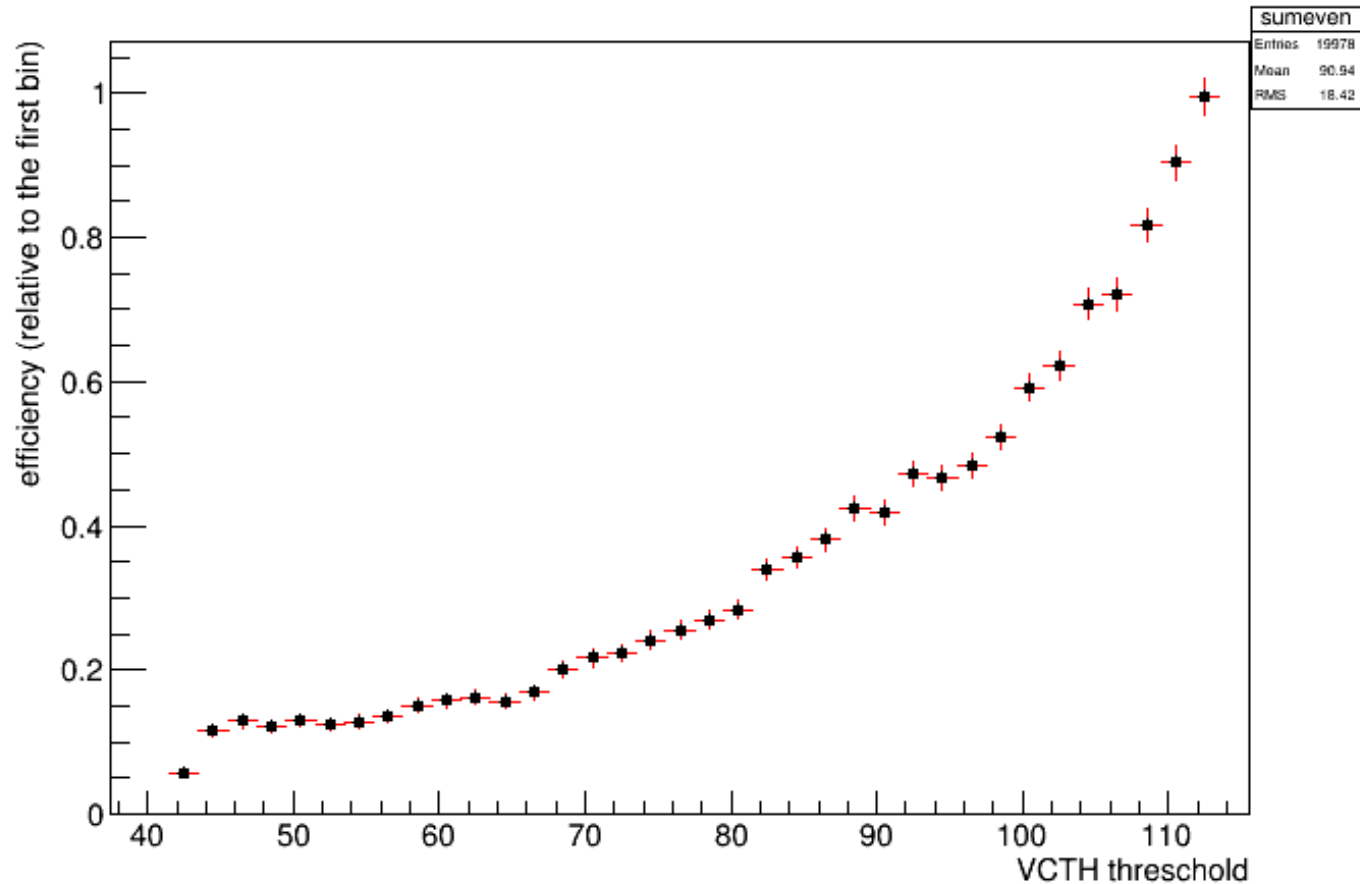

Fe0Cbc1_SignalScan	
Entries	1.841271e+07
Mean x	183.7
Mean y	81.65
Std Dev x	67.76
Std Dev y	20.75

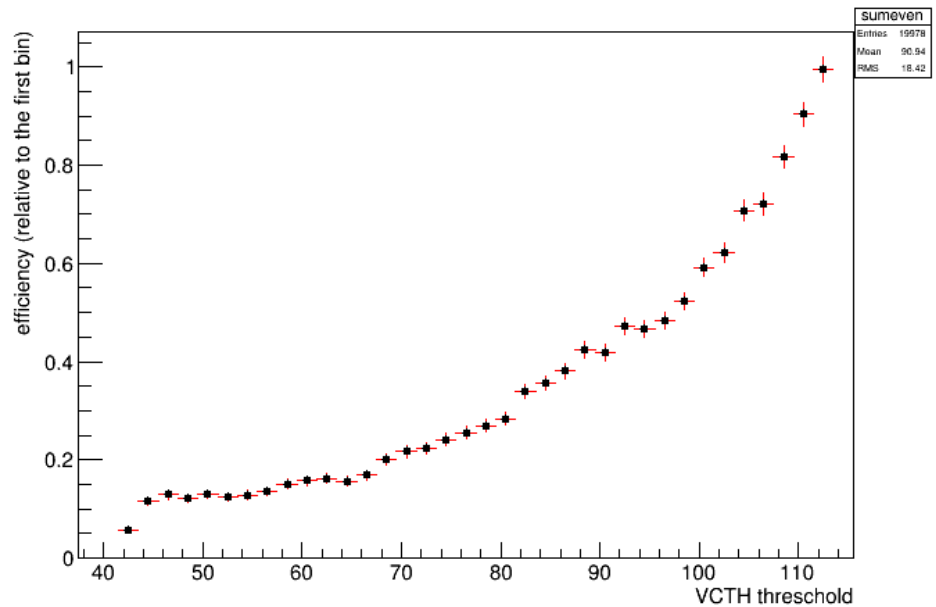

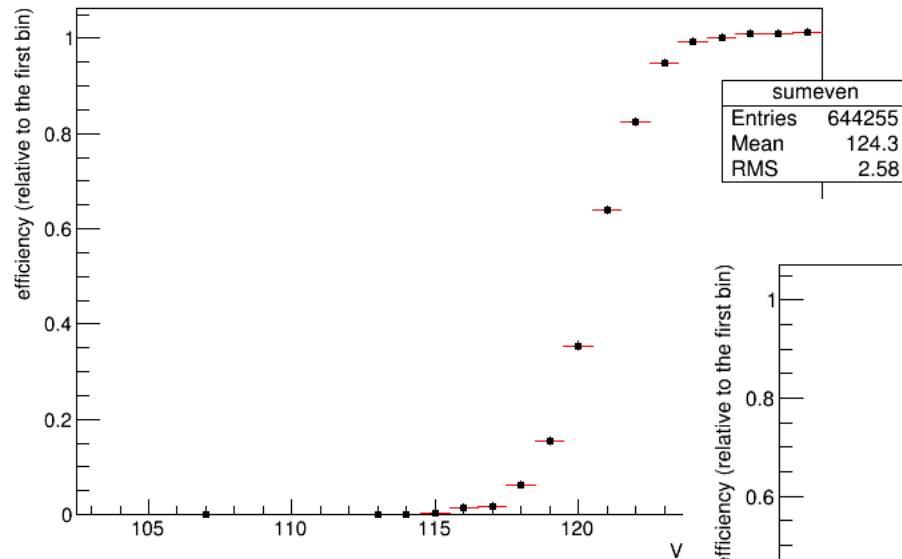

ProjectionY of binx=18 [x=16.5..17.5]

Signal Scan S-curve all channels

Noise&Signal S-Curves

Summary

- Detector is functional
- TestBech is setuped
- Some problems with trigger latency to be sorted out
- Documentation is available at [twiki](#)
