

Latest Results from Daya Bay experiment

lundi 16 juillet 2018 15:45 (20 minutes)

The Daya Bay Reactor Neutrino experiment has provided the most precise measurement of the $\sin^2 2\theta_{13}$ and $|\Delta m^2_{ee}|$ via a relative comparison of reactor antineutrino rates and energy spectra detected by eight identically designed liquid scintillator detectors placed at different baselines from six 2.9 GWth nuclear reactors. This talk presents the latest results from Daya Bay experiment.

Auteur principal: HUANG, Yongbo (IHEP, CAS)

Orateur: HUANG, Yongbo (IHEP, CAS)

Classification de Session: Artificial Neutrino Sources
