

# New Results from the Double Chooz Experiment

Thiago Bezerra (SUBATECH – IN2P3/CNRS, Nantes)  
on behalf of the Double Chooz Collaboration  
GDR Neutrino Meeting @ APC, 12/06/2018

# DC-IV FIT RESULTS

Data-MC fit including Bugey 4 normalization

# DC-IV FIT RESULTS

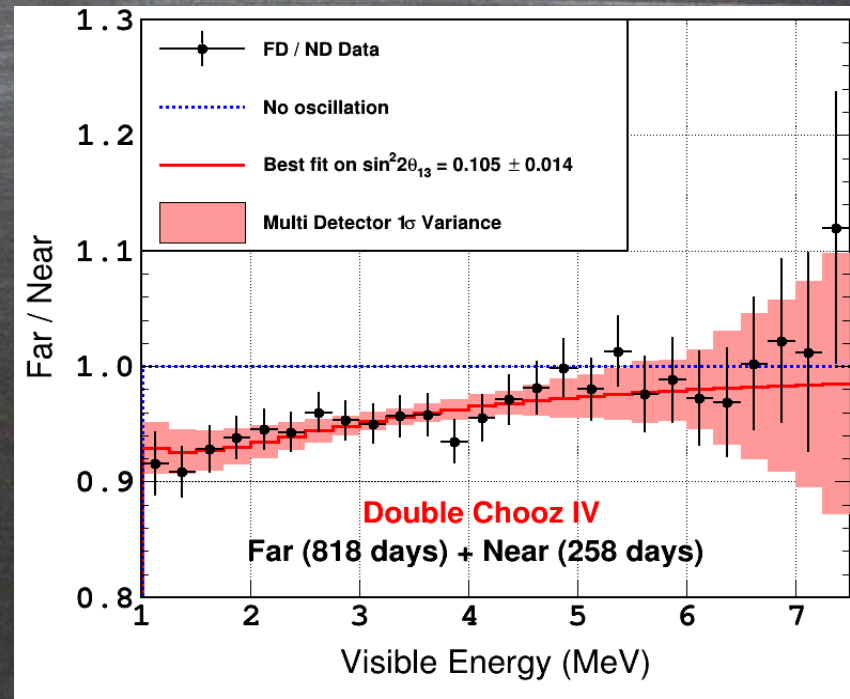

Data-MC fit including Bugey 4 normalization

$$\sin^2 2\theta_{13} = 0.105 \pm 0.014 \text{ (stat.+syst.)}$$

NEW!

# DC-IV FIT RESULTS

Data-MC fit including Bugey 4 normalization

$$\sin^2 2\theta_{13} = 0.105 \pm 0.014 \text{ (stat.+syst.)}$$

**NEW!**

Multi detector fit robust against spectral distortion

# „THE“ SLIDE ON REACTOR NEUTRINOS

Far  
 $< L > 1050\text{m}$   
 $\sim 100 \bar{\nu}_e / \text{day}$   
 $300 \text{ m.w.e.}$   
 $2011$

2 reactors  
 $2 \times 4.25 \text{ GW}_{\text{th}}$   
 $\sim 10^{21} \bar{\nu}_e / \text{s}$

Near  
 $< L > 400\text{m}$   
 $\sim 800 \bar{\nu}_e / \text{day}$   
 $120 \text{ m.w.e.}$   
 $2015$

Near Detector: to suppress systematics

$\bar{\nu}_e$  Disappearance between Near and Far detectors  $\rightarrow \theta_{13}$

# ENERGY RECONSTRUCTION

FD-I DATA Response uniformity

VERY GOOD NEAR - FAR AGREEMENT

Prompt Fission  $^{252}\text{Cf}$  @ NT center

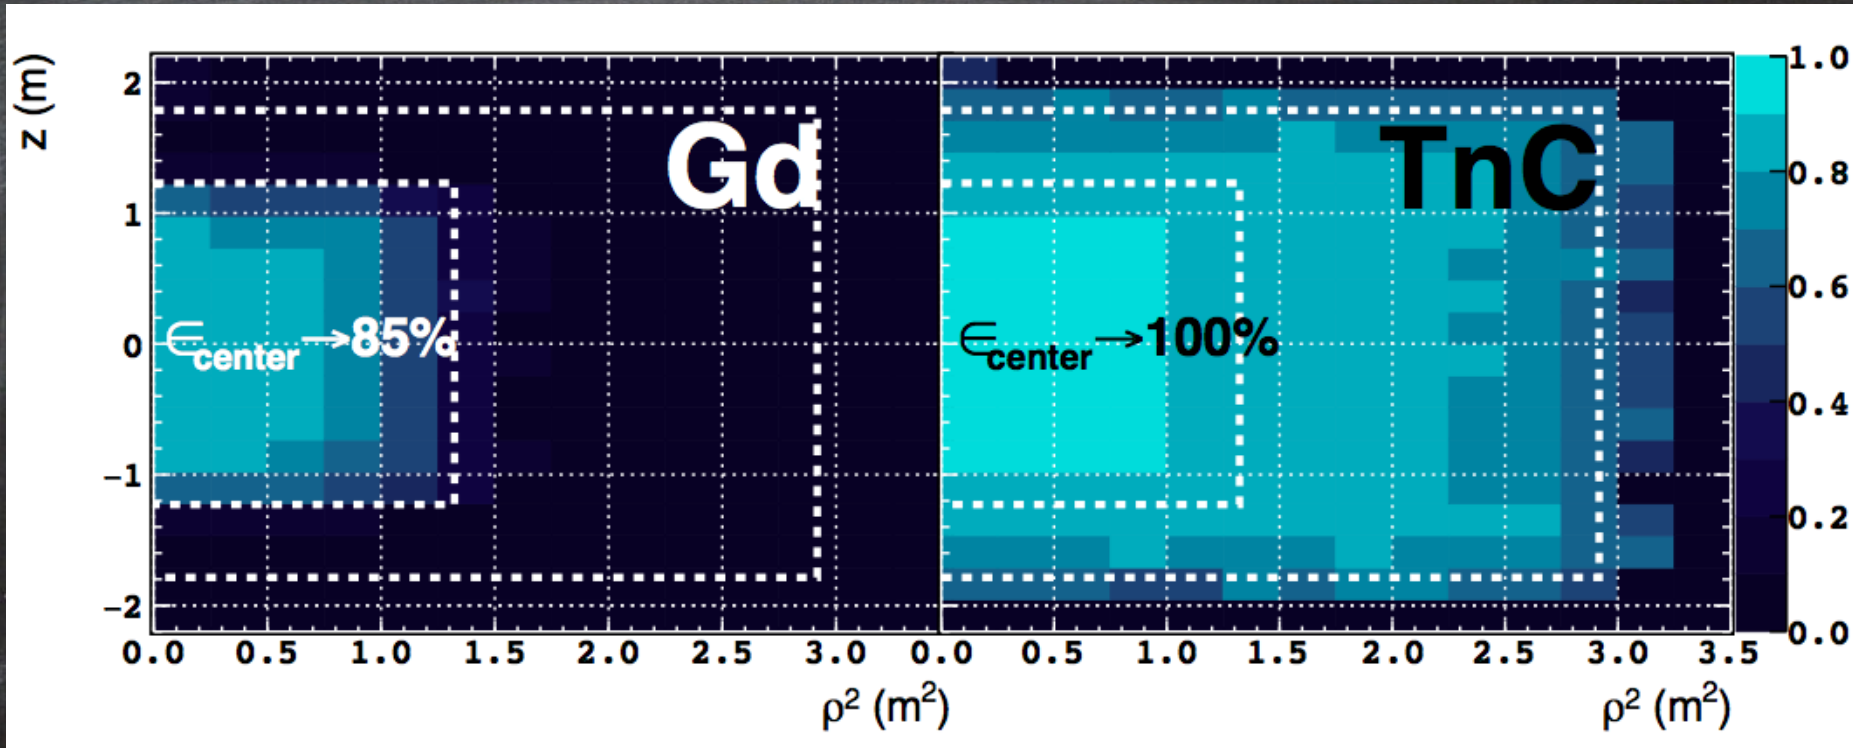

Time variations

# DC STATISTICS / EFFICIENCY

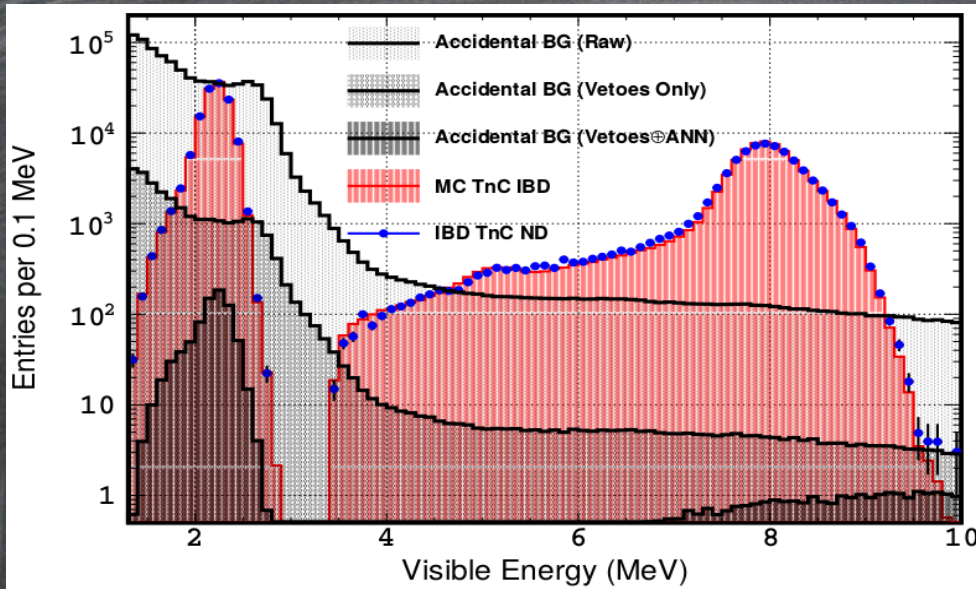

„Small“ Gd-target (8.3 t) and „only“ two reactors

„Total n-Capture“ (TnC) improves statistics factor 2.5!  
(captures on Gd+H+C -> leak immune!)

# BACKGROUND REDUCTION

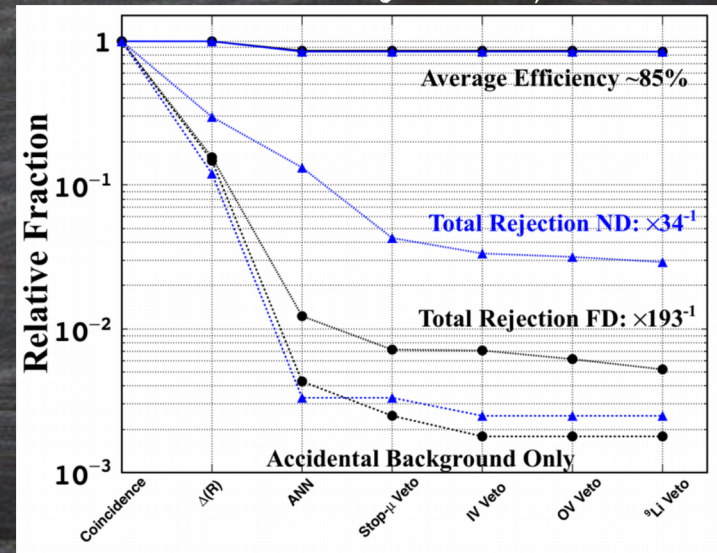

*Delayed E spectrum  
(data and MC) before  
and after cuts*

- > Good data/MC agreement for IBD candidates
- > Efficient background suppression with cuts/veto

Cumulative rejection per cut

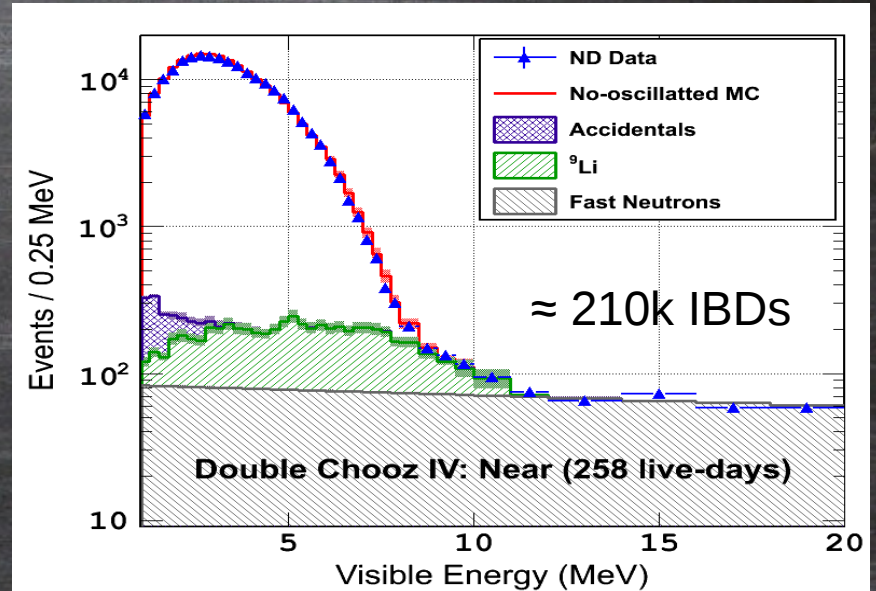

*IBD efficiency and  
background rejection*

# SPECTRAL DISTORTION COMPARISON (SHAPE ONLY)

Excellent agreement to first order

# SPECTRAL DISTORTION COMPARISON (SHAPE ONLY)

Agreement within statistics

# SPECTRAL DISTORTION COMPARISON (SHAPE & RATE)

-> "Excess" in agreement with Flux model

- > Empirical fit: negative slope and empirical double peak
- > Width significant larger than energy resolution
- > Slope not compatible with E.S. model

# SUMMARY

- > Three Years of Double Chooz 2 detectors data: 2015 - 2017
- > Novel IBD detection : Total Neutron Capture
  - > Improved statistics & systematics
- > Good background control ( $S/B > 10$ ) → Confirmed background model with Reactor-off Data!
- > New result:  $\sin^2 2\theta_{13} = 0.105 \pm 0.014$  (w/ 15 months of data)
- > Single Detector Fit protected with a new Flux error budget
- > Spectral distortion: slope + 4-6 MeV structure
- > Currently finalizing publication
- > Sensitivity improvement: extra data and new measurement of target proton mass ->  $\sim < 0.01$

# IN MEMORY OF ...
