

DE vs MG effect on Cluster Counts discrepancy

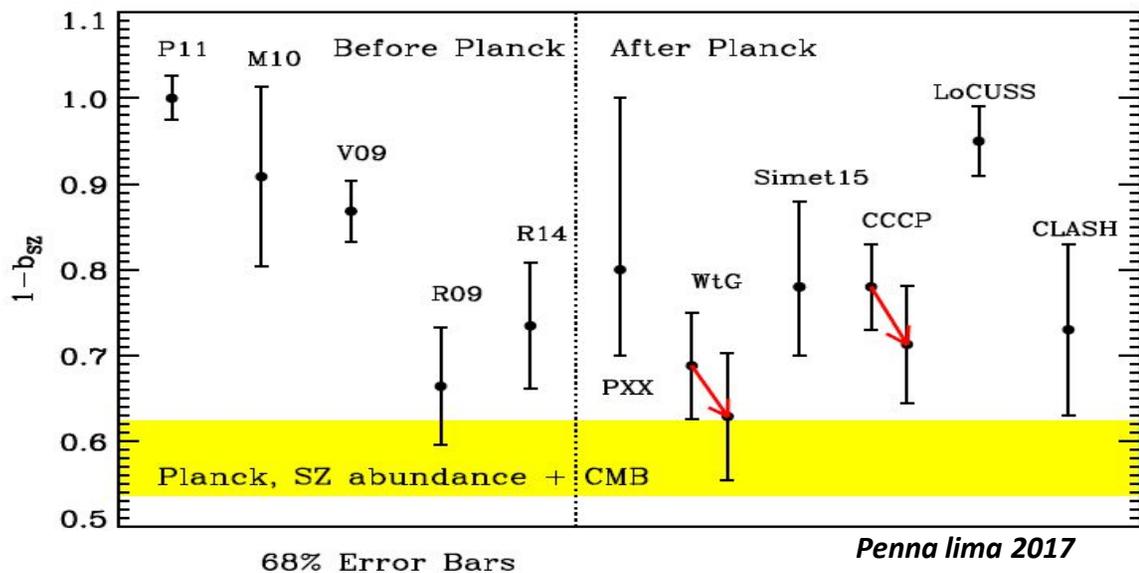

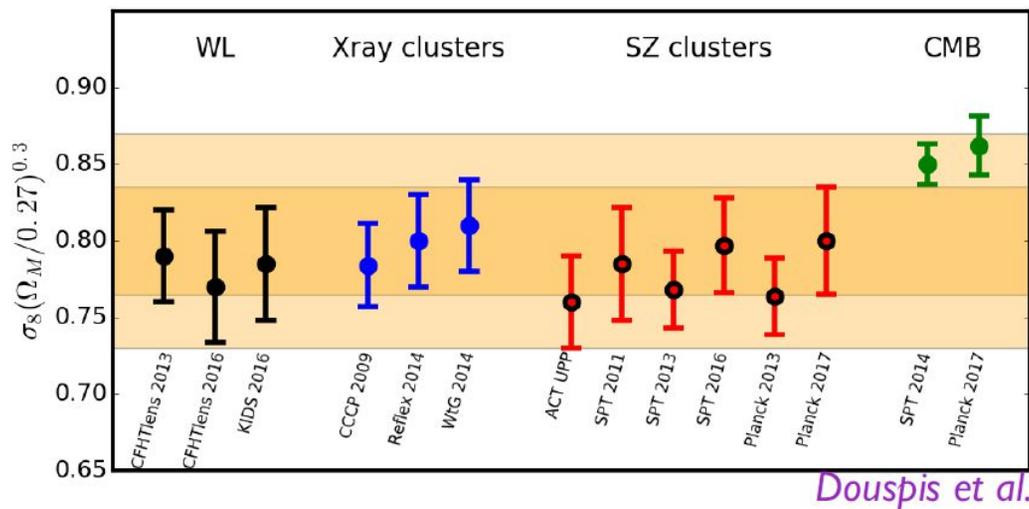

Z. Sakr with S. Ilic and A. Blanchard

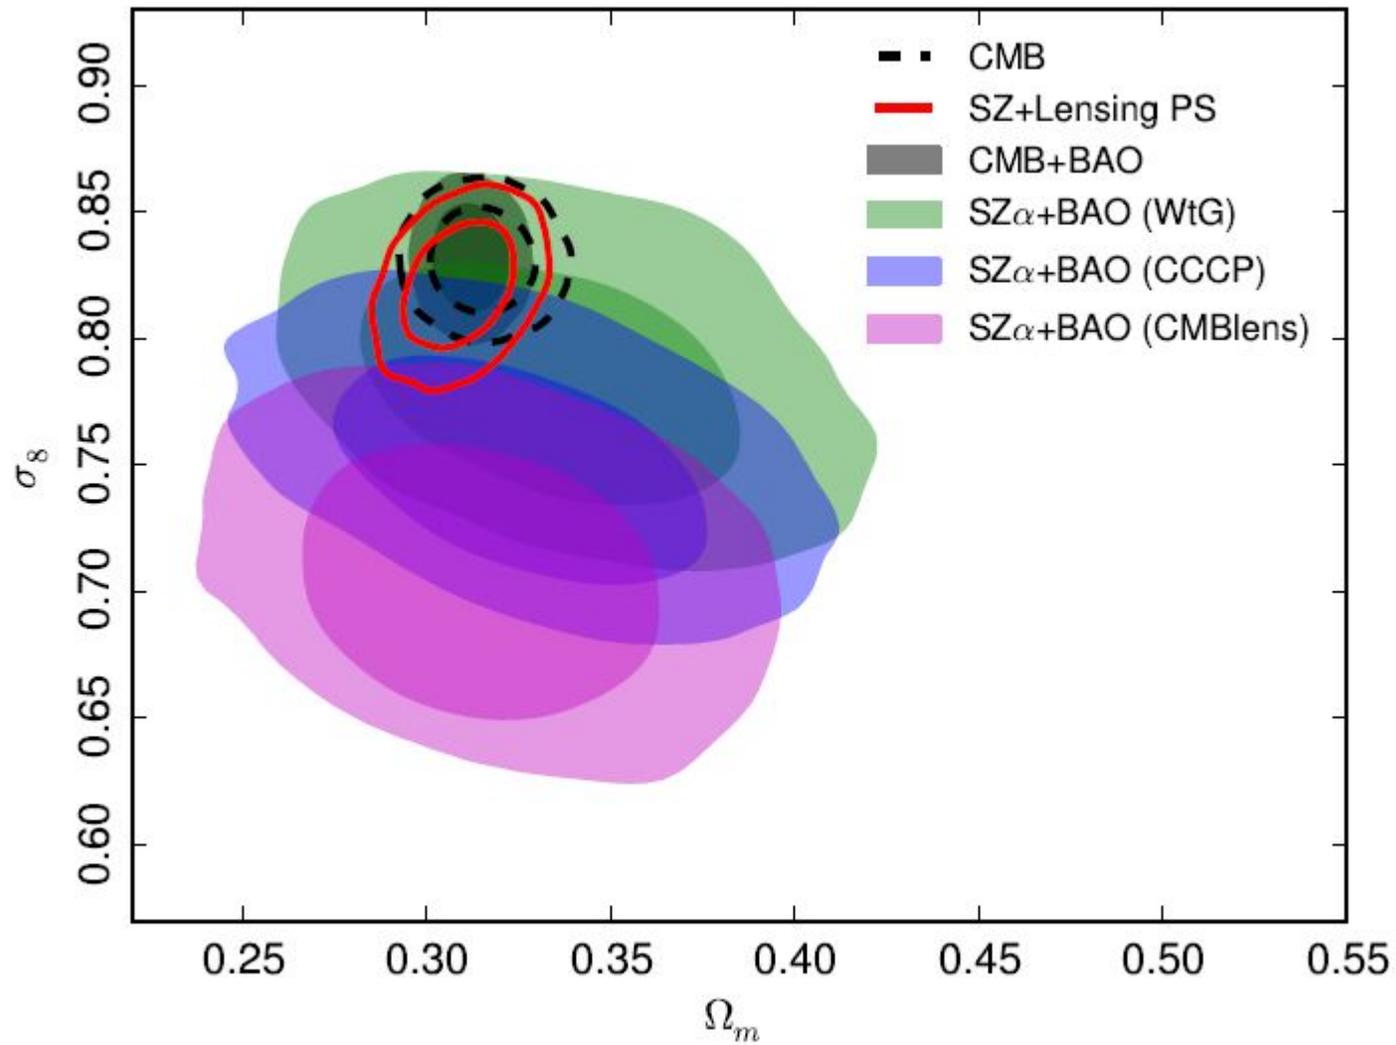

Dark Energy Action - July 2018

.....is this tension real..... ?

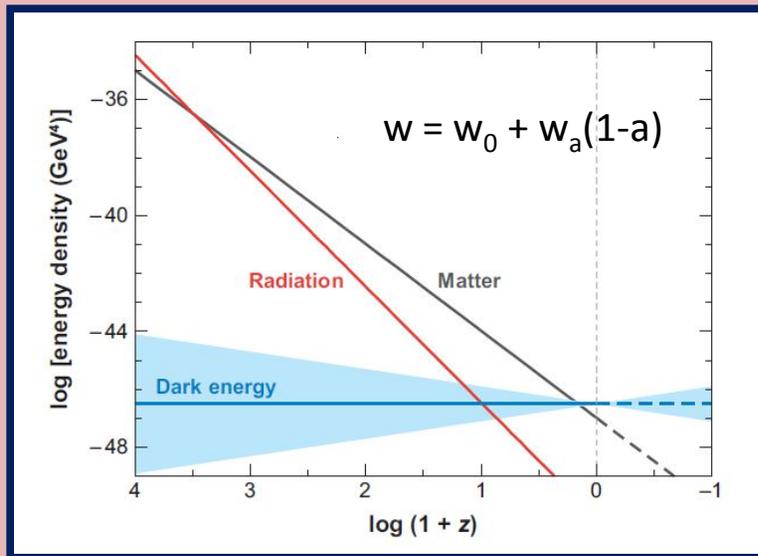

.....is this tension real..... ?

Galaxy Cluster Counts

$N(z, >M) = \text{Mass Observable relation} \times \text{vol} \times \text{HMF}$

$$\frac{d^2 N}{dz d \ln M} = \underbrace{A_{\text{survey}} \frac{c}{H(z)} \left(\int_0^z dz' \frac{c}{H(z')} \right)^2}_{\text{volume}} \underbrace{\frac{dn(M, z)}{d \ln M}}_{\text{mass function}},$$

Frieman et al. 2008

$$D''(a) + \left[\frac{3}{a} + \frac{H'(a)}{H(a)} \right] D'(a) - \frac{3}{2} \Omega_m(a) \frac{H_0^2}{H^2(a)} \frac{D(a)}{a^5} = 0.$$

$$\Omega_{\Lambda(mod)}(z) = \Omega_{\Lambda} (1+z)^{3(1+\omega_0+\omega_a)} \exp\left(-3\omega_a \frac{z}{z+1}\right)$$

$$\rho_i(z) = \rho_{i,0} \exp\left(3 \int_0^z \frac{dz}{z+1} [1 + w(z)]\right)$$

Experiences:

CMB C_l s : 2015 Planck mission EE ET EE $z \approx 1090$

X-ray Clusters : Temp. Sample from BAX $z \approx 0.05$

SZ Clusters : Planck 2015 Sample $z \approx 0 \rightarrow z \approx 1$

BAO : Boss 2014 $z \approx 0.1, 0.15, 0.32, 0.57, 2.36$

SNe : JLA $z \approx 0 \rightarrow z \approx 1$

Codes :

CLASS + CAMB _GI : Boltz. Code CMB and P_k generator

SIB_GI : Temp. funct. Module

SZ_count_GI: SZ. count. Module

Montepython + Cosmomc _GI : parameter inference

Obtained using.....

Likelihoods :

CMB : Planck_lowl and

Planck_highl_TTTEEE

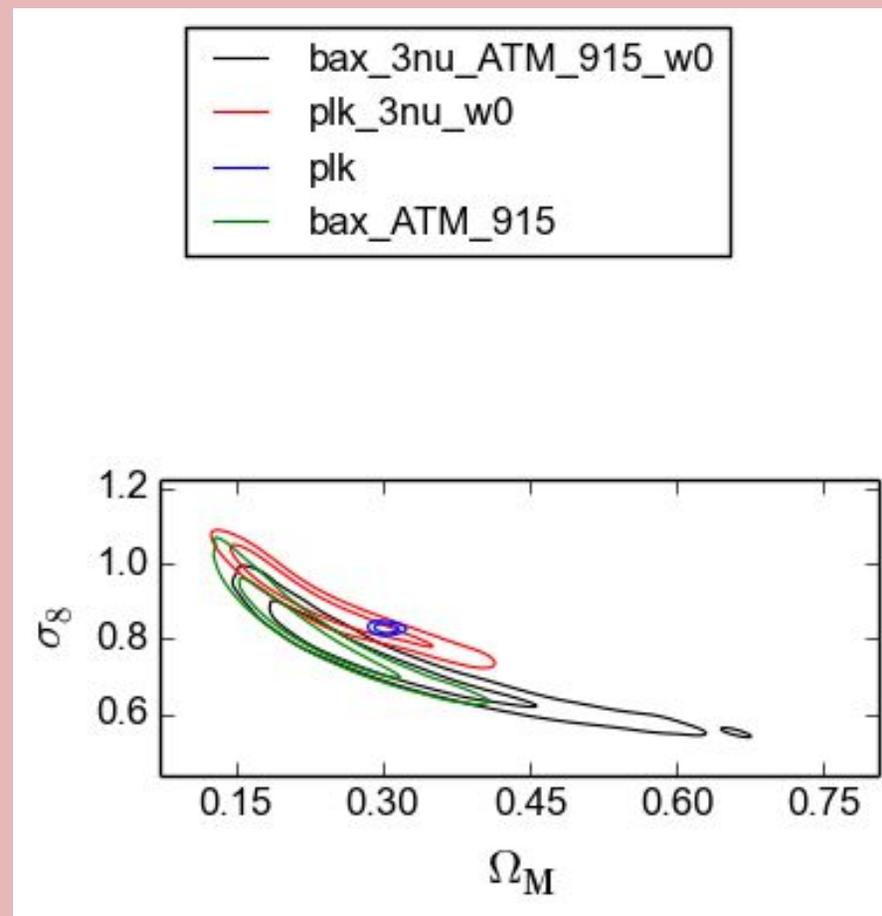

SZ : Poisson

X-ray : Weinbull

BAO SN : Gaussian

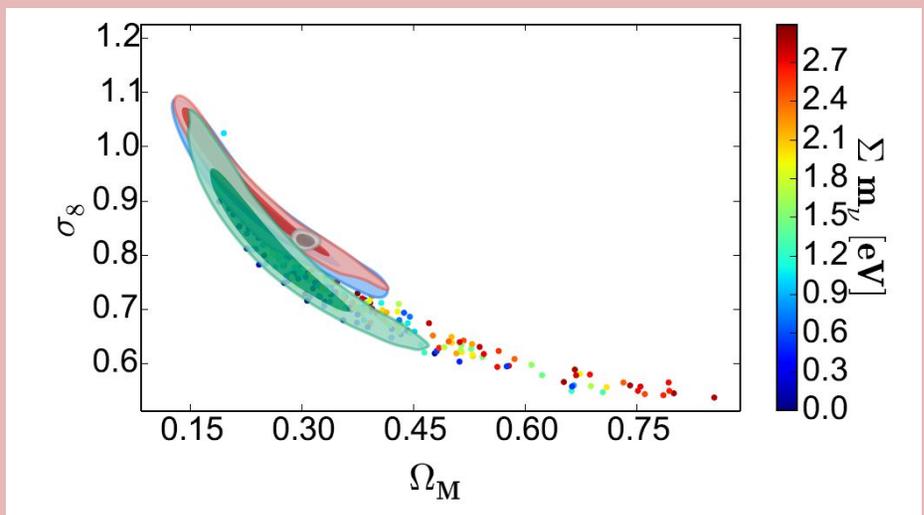

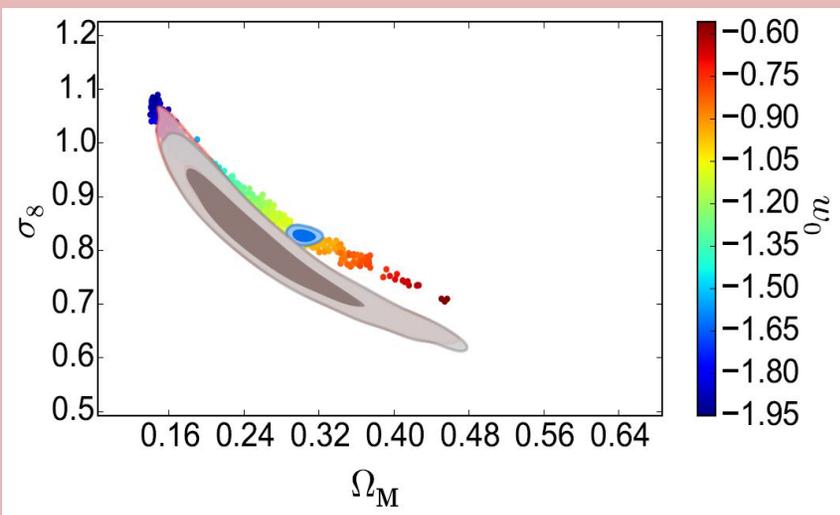

Dark Energy parameter $w \neq -1$?

*Confront CMB Cls...

BAO

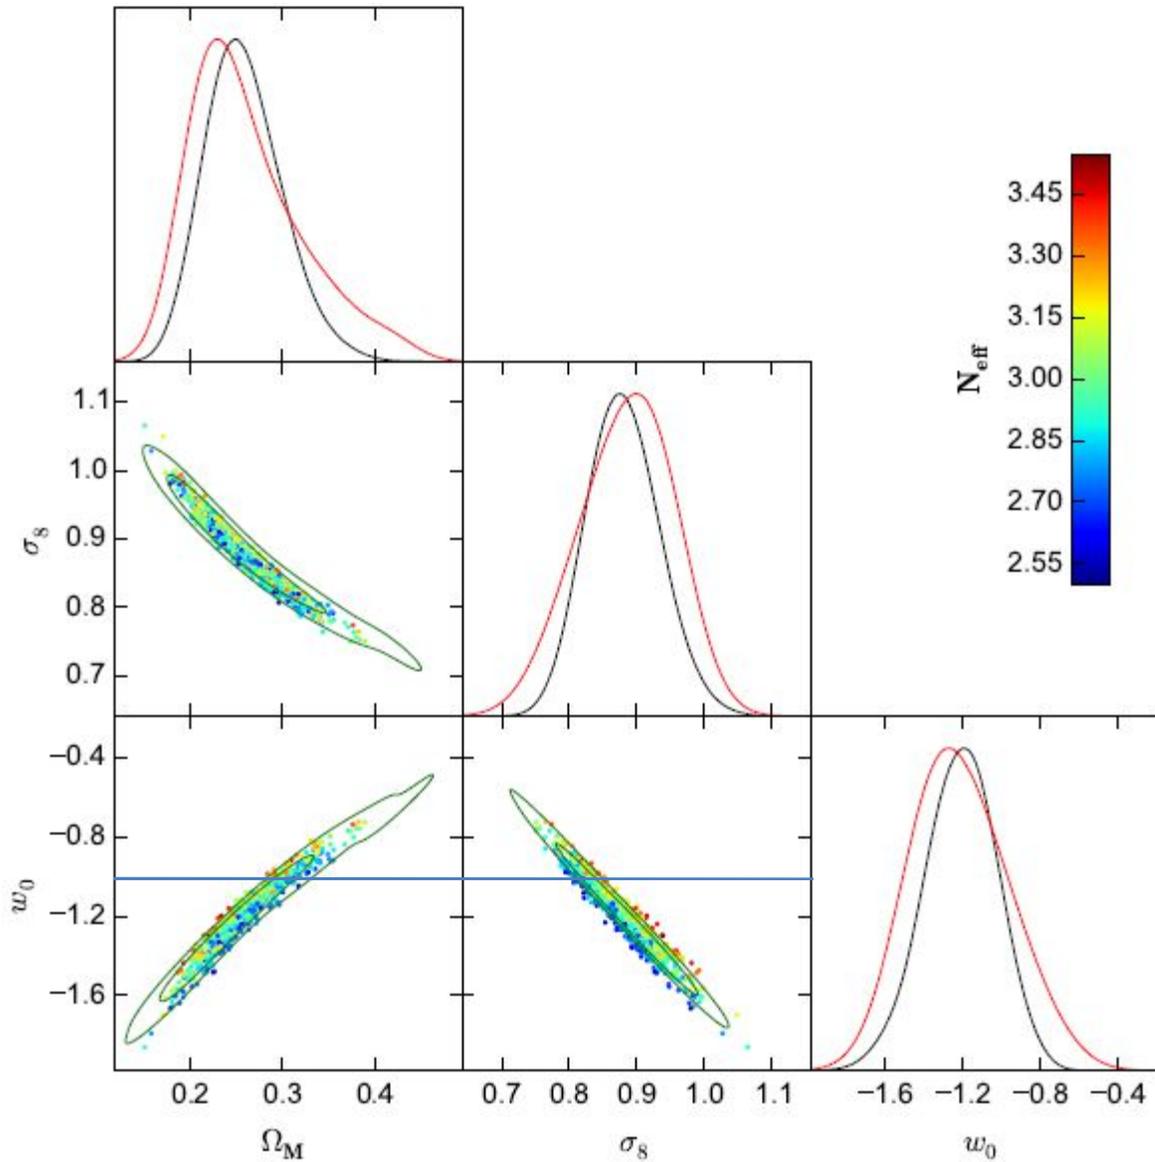

$$w = w_0 + w_a(1-a)$$

Dark Energy parameter $w \neq -1$?

Confront CMB Cls...
with
X-ray sample....

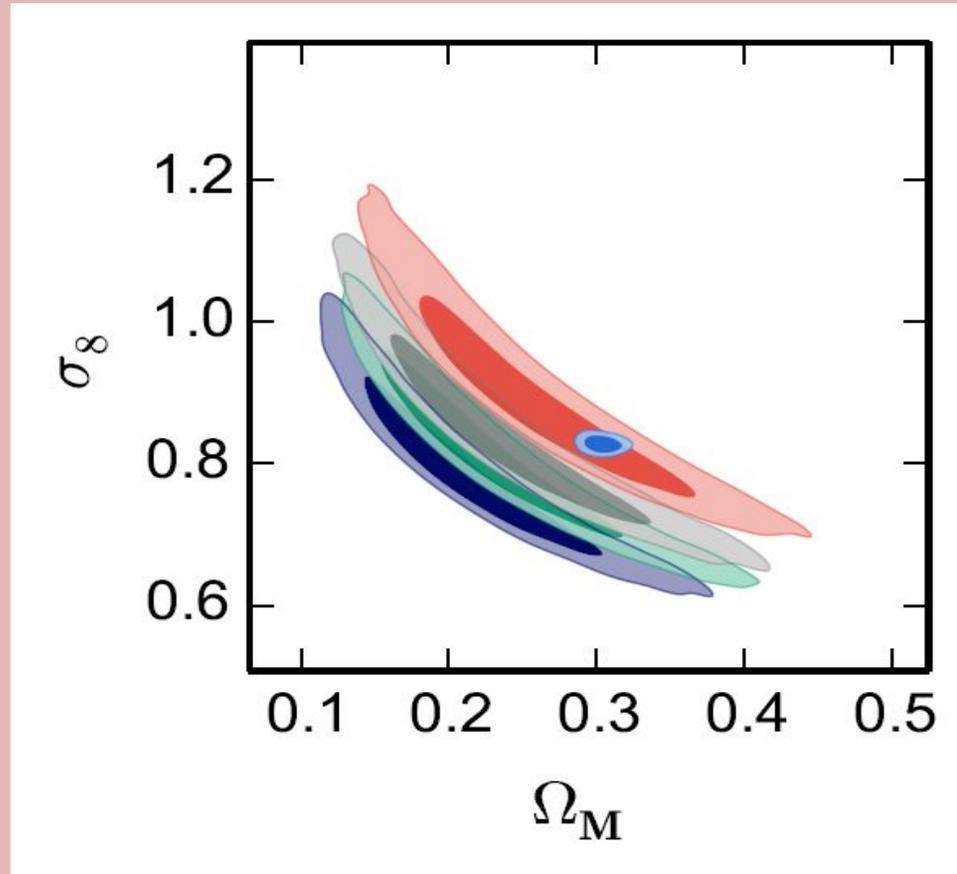

**Exotic Neutrino Species
VS
Dark Energy**

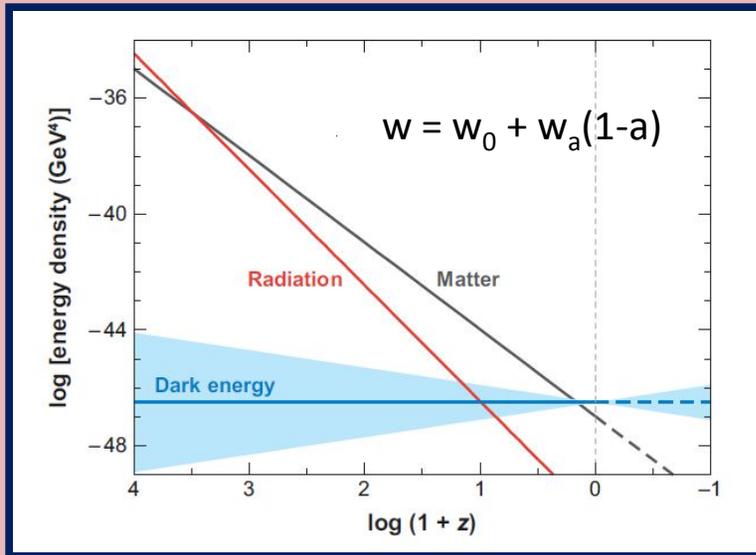

- Allowing effective number of neutrinos to vary along with a free w has no effect on the σ_8 – Ω_m degeneracy

The main thing....

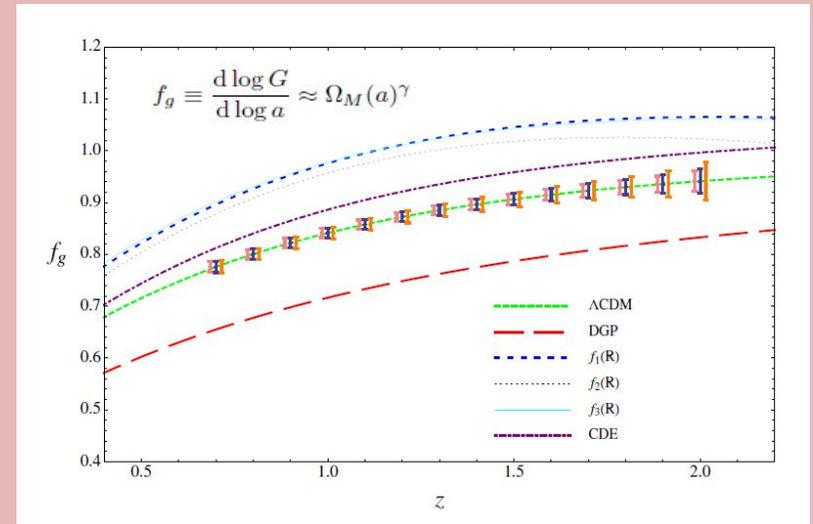

A mis-calibration could be the origin behind the discrepancy

Frieman et al. 2008

Euclid TWG review 2013

2

1

$$\rho_i(z) = \rho_{i,0} \exp \left(3 \int_0^z \frac{dz}{z+1} [1 + w(z)] \right)$$

2

$$f' + f^2 + \left(1 + \nu + \frac{H'}{H} \right) f - \frac{3}{2} \mu \Omega_m = 0$$

$$f(z) = \Omega_m^\gamma(z)$$

Mixing Dark Energy & Modified Gravity

Case 1 :

γ

+ w

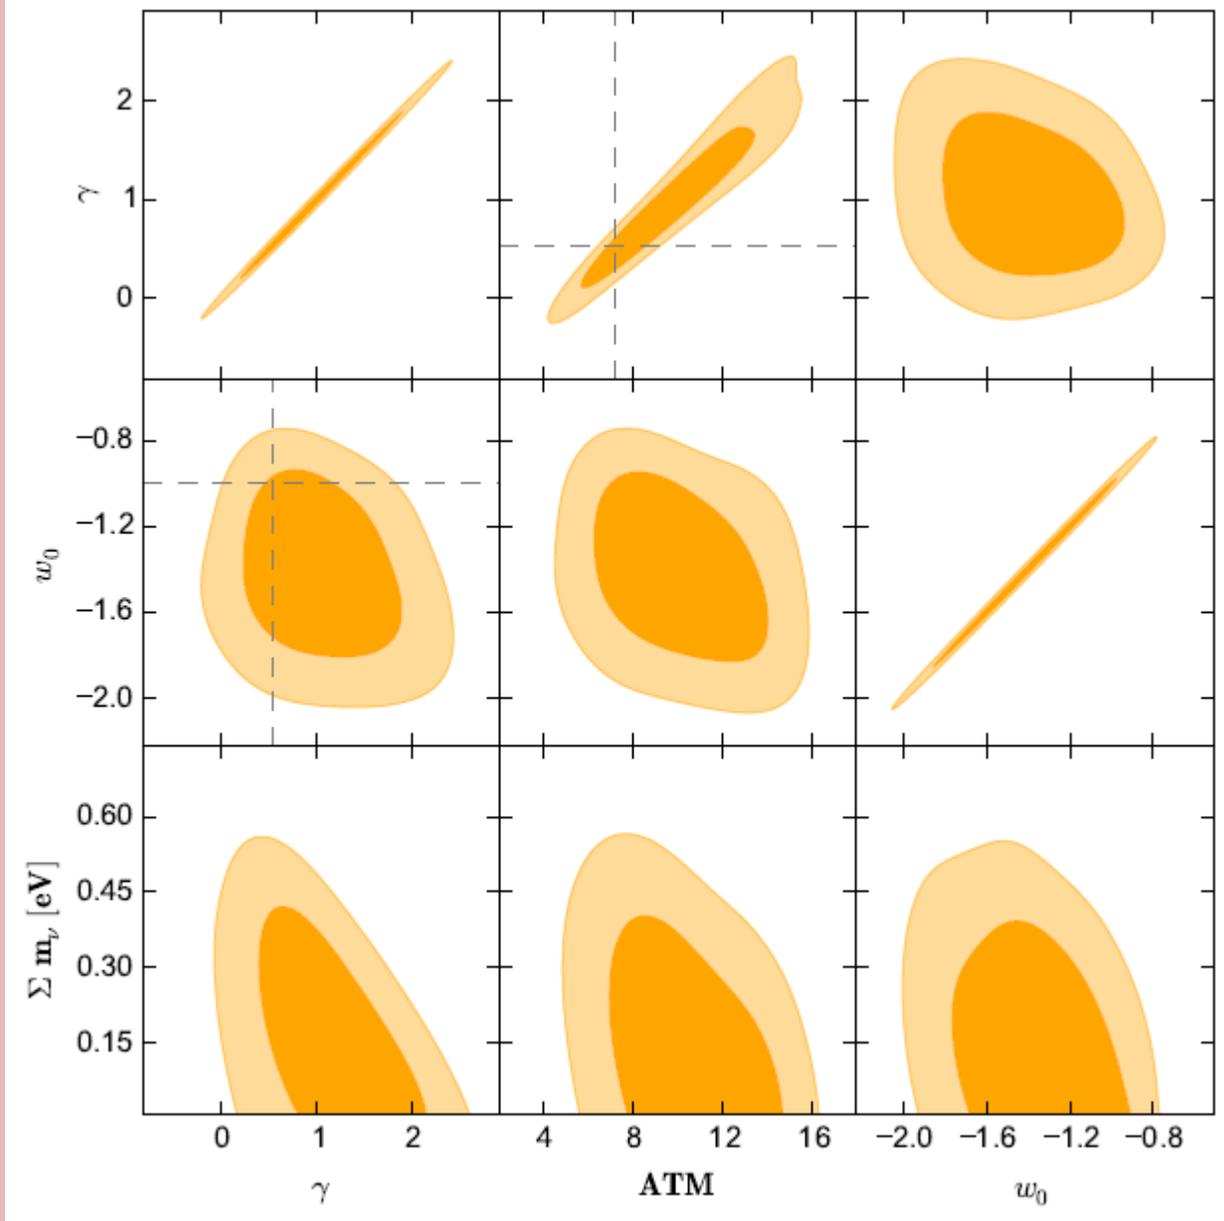

Case 2 :

$$\gamma = \frac{3(1-w)}{5-6w}.$$

+ $\Delta \gamma$

Wang 1998

$$\sigma_{\gamma,wCDM}(z) = \frac{D_{\Lambda CDM}(z_*)}{D_{\gamma,CDM}(z_*)} \frac{D_{\gamma,CDM}(z)}{D_{\Lambda CDM}(z)} \sigma_{wCDM}(z)$$

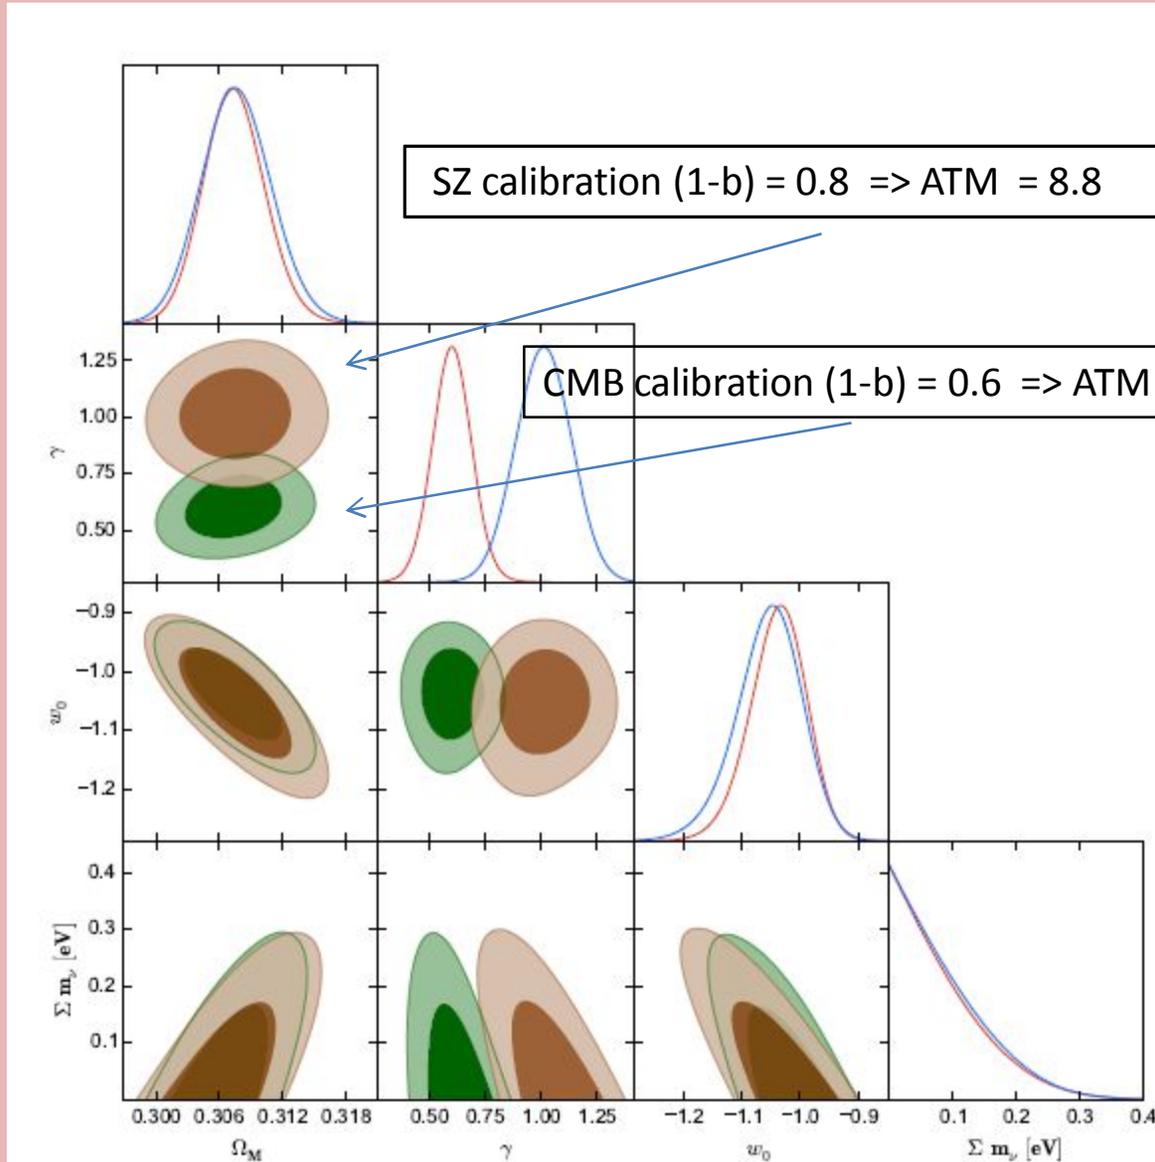

Combine CMB Cls...
 &
 X-ray sample...

Case 1 :

γ

+

$w \neq -1$

Case 1 :

γ

+

$w \neq -1$

...combining all...

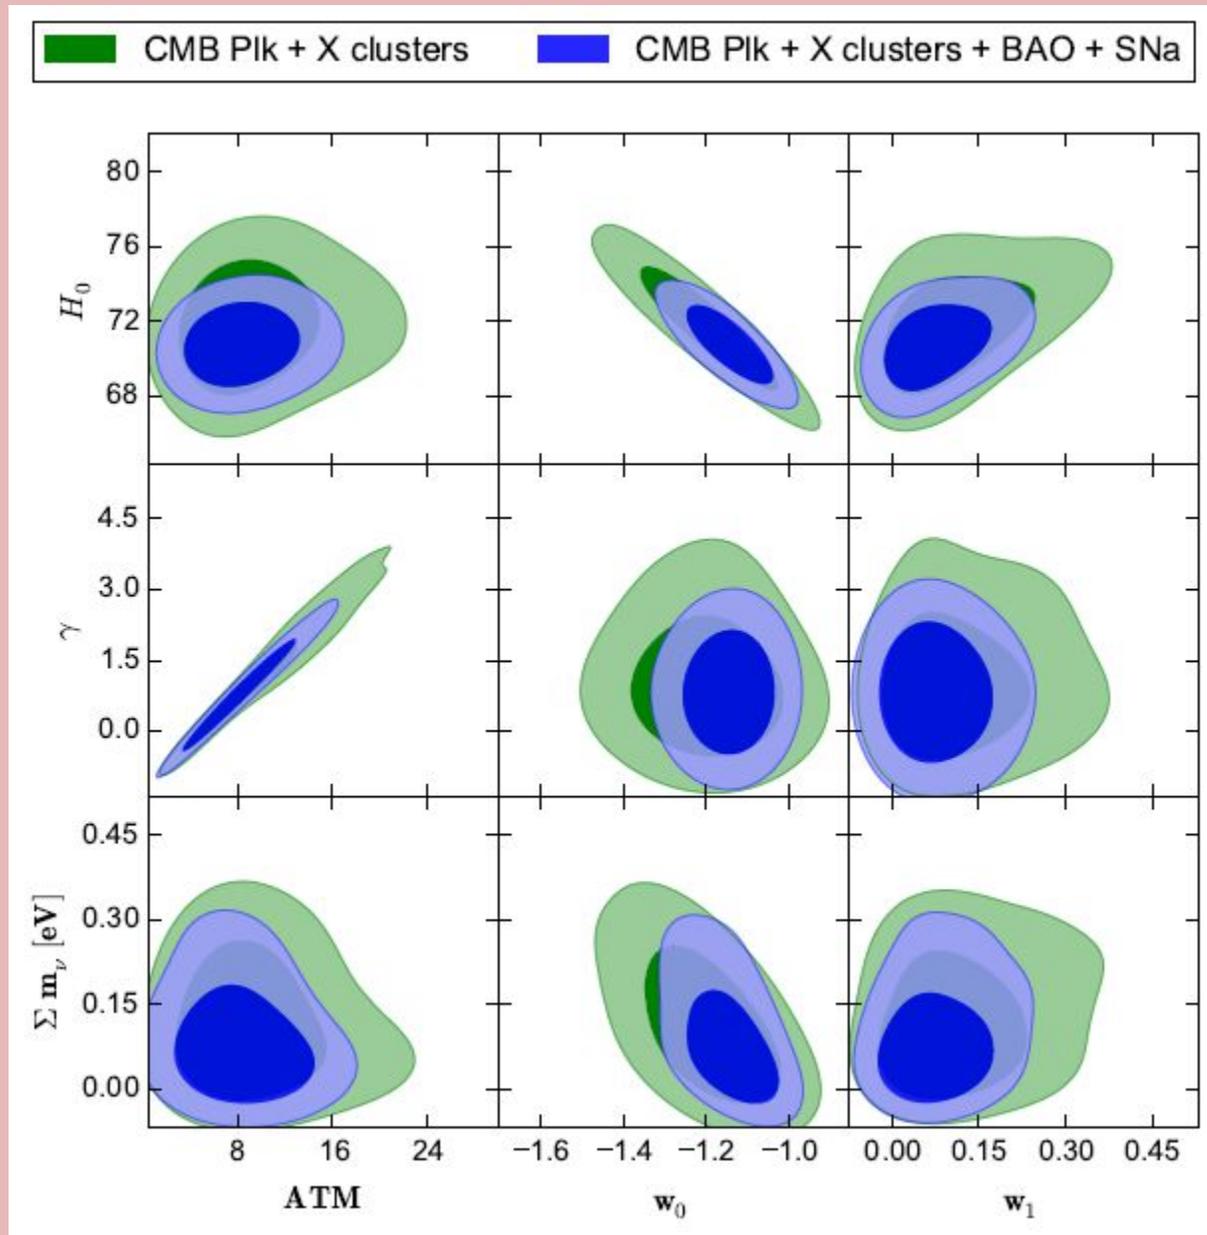

X-ray
+
CMB
+
SNa
+
BAO

- No effect from a dynamical ω on the γ - ATM correlation when X ray and CMB are combined
- Adding additional probes constrain more ω from altering the former correlation

Case 1 :

$$\gamma + \omega$$

$$w = w_0 + w_a(1-a)$$

**Combine CMB Cls...
&
SZ sample....**

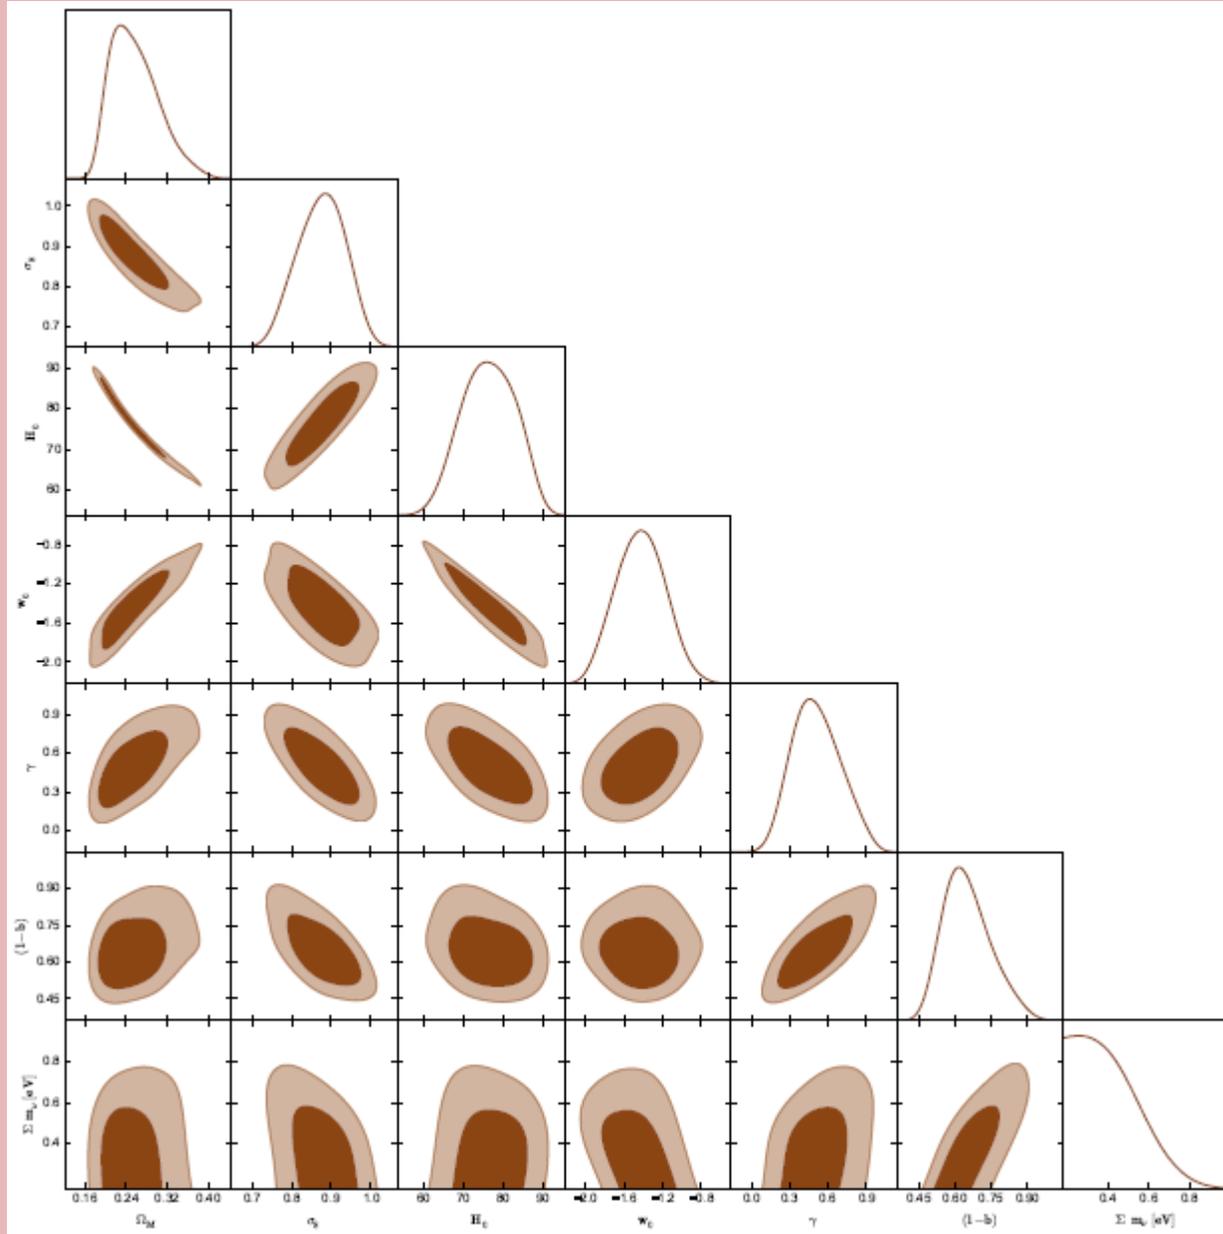

+ SNa

Case 1 :

γ

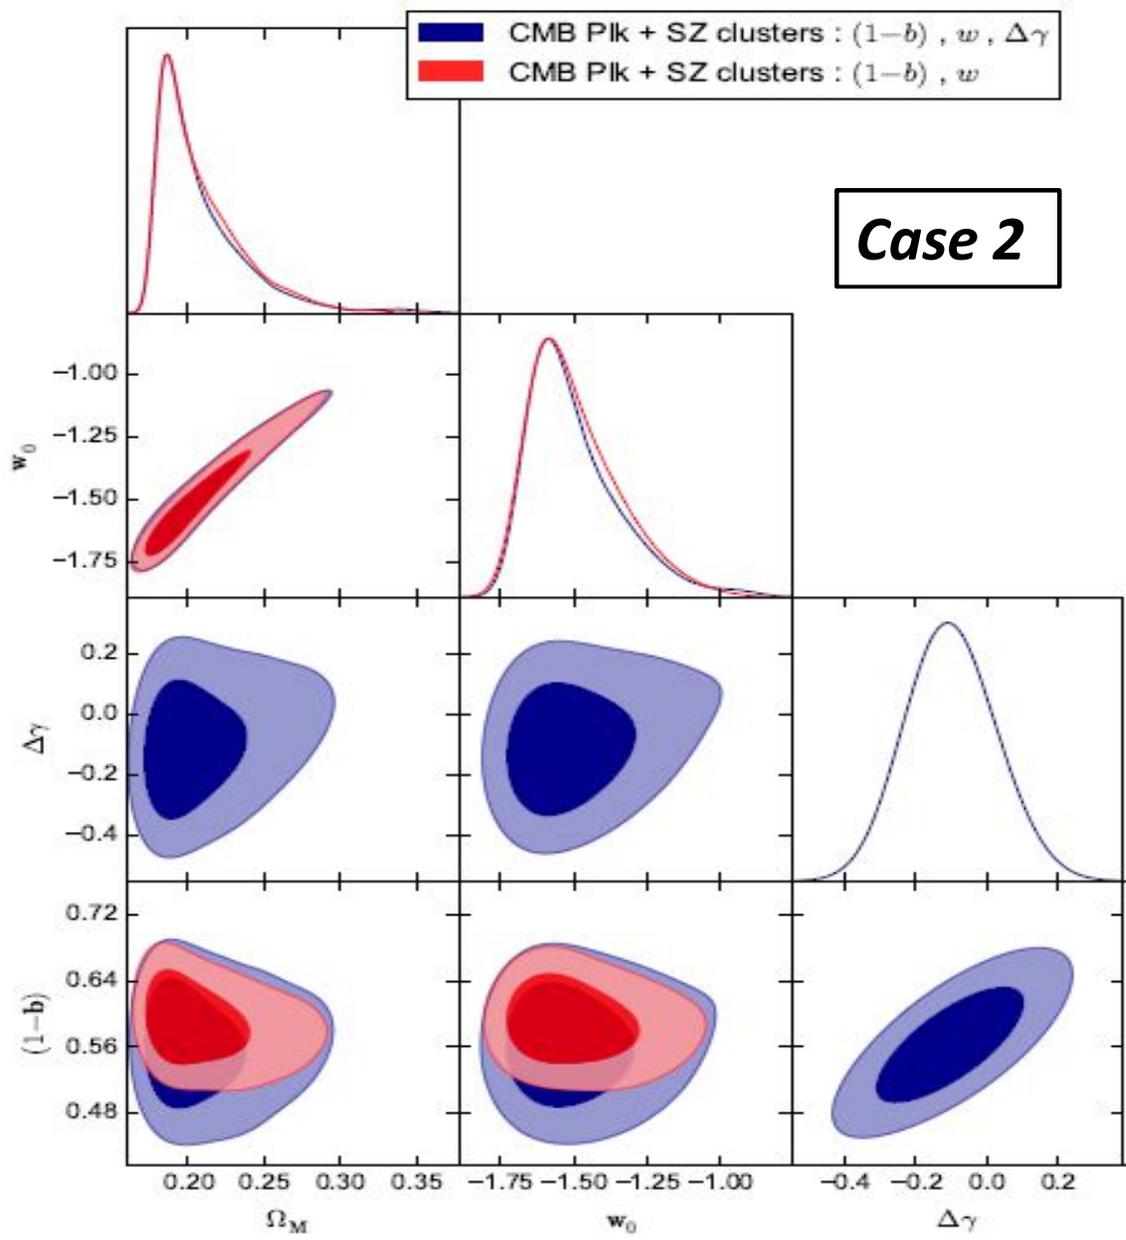

w cte

**Combine CMB Cls...
&
SZ sample....**

Case 2

- No correlation between ω and $(1-b)$ while a pure growth index still correlates with $(1-b)$

Thank you
