SM is **NOT** the end of story...

- Hierarchy: From neutrinos to the top mass, masses differs by 13 orders of magnitude
- Naturalness: Fine tuning of the Higgs mass
- Masses of Higgs and top quark: meta-stable of the vacuum

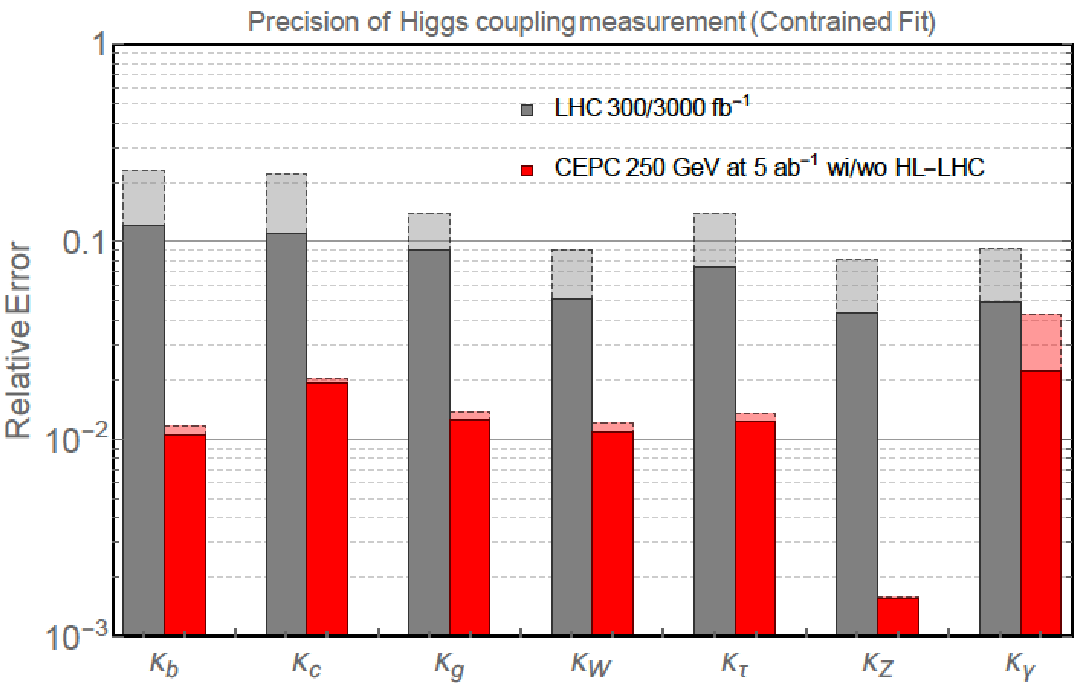
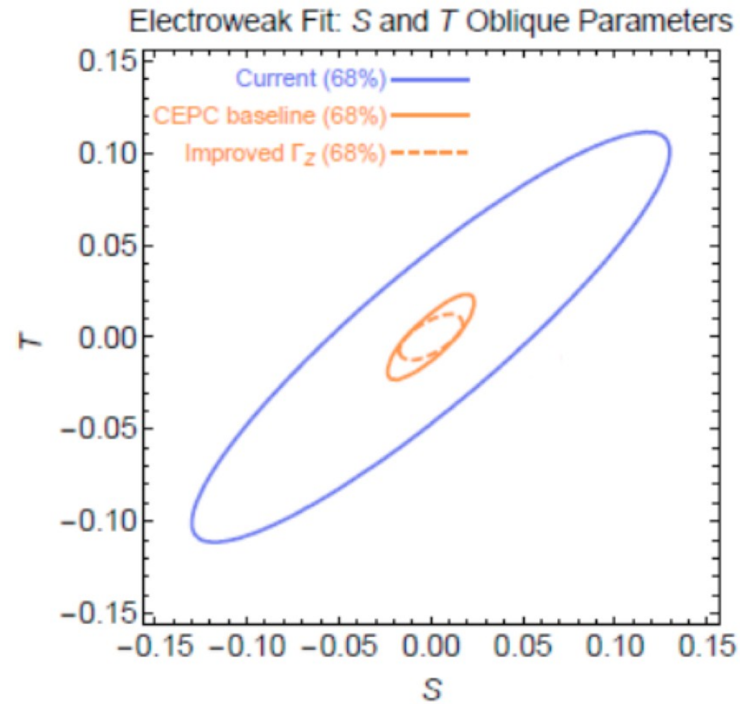
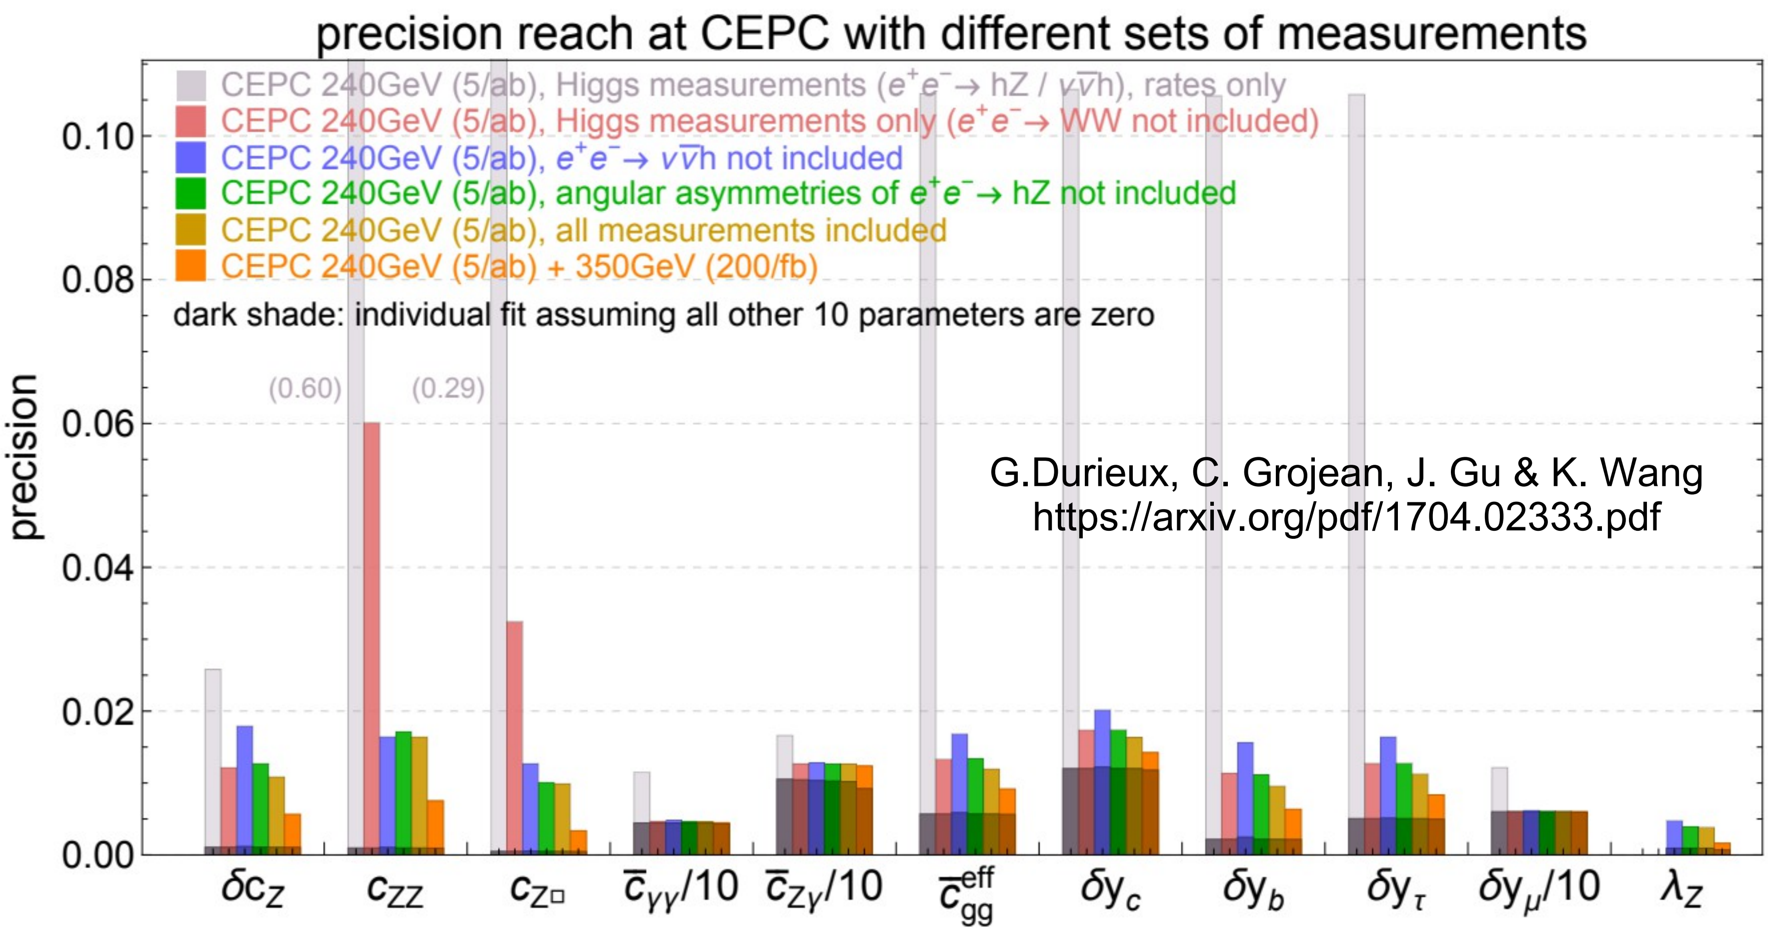
Physics Potential





- The nature of Higgs boson & EWSB, + flavor physics...
  - Higgs signal strengths (In kappa framework): expected accuracy roughly 1 order of magnitude better than HL-LHC
  - Absolute measurement to the Higgs boson: 2-3% level accuracy of Higgs boson width, 10^{-3} - 10^{-5} up limit to Higgs invisible/exotic decay modes (improved by at least 2 orders of magnitude comparing to HL-LHC)
  - Improve EW measurement precision by at least 1 order of magnitude

Pheno-studies: EFT & Physics reach



The Physics reach could be largely enhanced if the EW measurements is combined With the Higgs measurements (in the EFT)

Br(H->ZZ): relative error of 6.9% achieved with ZH->ZZZ*->vv(Z)llqq(H) final states. Extrapolation of TLEP result leads to 4.3% relative error

Install CEPC Software

Estimated reading time: 3 minutes

This page will guide you on fully installing CEPC software on the local machine.

Install CEPCEnv

`CEPCEnv` is a tool used for managing the installation and environment of CEPC software. In order to install CEPC software, the CEPCEnv toolkit should be installed first. Install `CEPCEnv` with the following command:

```
curl -sSL http://cepcsoft.ihep.ac.cn/package/cepcenv/sc
```

Change `[CEPCENV_DIR]` to where you want to install. If `CEPCENV_DIR` is omitted, `CEPCEnv` will be installed in the current directory.

The setup scripts `setup.sh` and `setup.csh` could be found in the directory after the installation. They are used for the initialization of `cepcenv` command.

Leptons	99.5 – 99.9%	99.5 – 99.9% at Higgs Runs(c.m.s = 240 GeV), Energy dependent	$P(\pi^{\pm} \rightarrow leptons) < 1\%$
Photons*	99.3 – 99.9%	99.5 – 99.9% at Higgs Runs Energy Dependent	P(Neutron $\rightarrow \gamma$) = 1- 5%
Charged Kaons**	86 – 99%	90 – 99% at Z pole Runs (c.m.s = 91.2GeV, Track Momentum 2- 20 GeV)	$P(\pi^{\pm} \rightarrow K^{\pm})$ = 0.3 – 1.1%
b-jets	80%	90% at Z pole runs ($Z \rightarrow qq$)	P(uds → b) = 1% P(c → b) = 10%
c-jets	60%	60% at Z pole runs	P(uds → c) = 5% P(b → c) = 15%
