

2nd PCWG/Project workshop is already a success!

We have a running joke:

We have a mascot:

We even have a moto !

“We need to organize
the data taking”

Detector optimization:

What additional data do we need ?

Who takes it ?

Who analyses it ?

This seems under control

Kirk, Claire, $(\pi r)^2$

How much longer can we play with it?

Planning a “short” visit in Tucson ?

CTE, PTC, detector characterization:

What additional data do we need ?

Who takes it ?

Who analyses it ?

How do we share it ?

How much longer can we play with it?

Given the amount of data, logging becomes crucial.

Next steps:

Spectrograph characterization prerequisite:
Instruments characterization

Who does it ?

Who analyses it ?

Spectrograph characterization:

What additional data do we need ?

Who takes it ?

Who analyses it ?

Do we need additional hardware ?
