

TEDD MECHANICAL SIMULATIONS

É. Schibler, IPNLyon

CMS Tracker Upgrade France

Lyon, 5-6 Dec. 2018

SUMMARY

- From CAD model to FE model
- Calculation hypothesis & Boundary conditions
- Calculation results
- From results to new geometry

FROM CAD TO FE MODEL

3D SIMPLIFICATION

Initial complete 3D design

Remove useless parts
*Filler / module / insert / cooling
 Electronics
 Pins & screws*

Simplify geometry
*Non-regular Shape & Thickness
 Holes / Chamfer / shoulder*

FROM CAD TO FE MODEL

2D SIMPLIFICATION

3D face to 2D surface
3D spacer to 1D beam

CALCULATION HYPOTHESIS MATERIAL

Disk Sandwich [9,6mm]
6x CF UD 50µm 0/60/120°
9mm Airex Foam
6x CF UD 50µm 0/60/120

Inner Tube [2mm]
20x CF woven 100µm 0/45°

Spacer [Ø8mm]
Aluminium

BackDisk Sandwich [10mm]
10x CF UD 50µm 0/60/120°
9mm Airex Foam
10x CF UD 50µm 0/60/120

Strap [10mm]
Carbon isotropic

Beam [4mm]
20x CF woven 200µm 0/45°

CALCULATION HYPOTHESIS

CONTACT & MESHING

416 Contacts
Totally bounded

Elements orientation

Mesh
65000 nodes
Orthogonal quality > 0,996

CALCULATION HYPOTHESIS BOUNDARY CONDITIONS

- Gravity
 - -Y
- Distributed mass on disks
 - modules & cooling equipment
 - 32 to 39 kg/disk
- Fixed support
 - 4 lateral wheels
- External services
 - Non uniform repartition
 - 150 kg cables
- No Patchpanel weight

CALCULATION RESULTS

INITIAL CASE

- 12 beams / all straps / no service
- Strain = 0,15 mm
- Stress = 17 MPa

CALCULATION RESULTS

SERVICES INFLUENCE

- 12 beams / all straps / services
- Strain = 0,22 mm
- Stress = 25 Mpa

➔ +50%

CALCULATION RESULTS

STRAPS INFLUENCE /1

- 12 beams / 2 strap rings / services
- Strain = 0,22 mm
- Stress = 26 Mpa

→ 4 strap rings
↔
2 strap rings

CALCULATION RESULTS

STRAPS INFLUENCE /2

- 12 beams / no strap / services
- Strain = 0,47 mm
- Stress = 24 Mpa

➔ +200%

CALCULATION RESULTS

BEAMS INFLUENCE

- 8 beams / no strap / services
- Strain 0,47 mm
- Stress 24 Mpa

→ 12 beams \Leftrightarrow 8 beams

Lateral beams

Top & bottom beams

CONCLUSIONS

CALCULATION RESULTS

- Services influence
 - 150 kg non-uniform services : Δ_{\max} & σ_{\max} \nearrow 50%
 - + 50kg patchpanel to take into account
- Straps influence
 - 4 complete strap rings \Leftrightarrow 2 complete strap rings
 - No strap rings : \nearrow 200%
- Beams influence
 - 12 beams \Leftrightarrow 8 lateral beams \Leftrightarrow 8 top&bottom beams

CONCLUSIONS TOWARD NEW DESIGN

- New design : work is on going
 - 4 strap rings
 - 8 beams at 45°
 - Inner tube thickness 3 mm
 - No backdisk
 - Patchpanel weight +50kg
