Streaming readout for EIC

jeudi 25 juillet 2019 09:54 (15 minutes)

With the advent of cheap, highly integrated and fast converter electronics, the old and limiting paradigm of a hardware-triggered read out solution can be replaced with a fully streaming readout system, in which data selection is moved into the software domain. In the talk, the advantages of such a system and its implications in the context of EIC will be discussed.
