

Alerts : what to follow ?

C. Lachaud

Date

O3 and O4 run

After a one month break, O3 will resume the 1st of November 15h UTC.

It should continue up to 30th April 2020
(with a possible 2 months extension).

The O4 run is supposed to start at the end of 2021, near the launch date of SVOM...

Between O3 and O4

We clearly need to continue BA activities, to continue efforts on tests, developments, etc...

In addition to the GWAC we will have the 2GFTs as soon as they are available.

My proposition is to continue to follow alerts at the end of O3 :

Fermi-GBM GRBs
Neutrinos public alert

GRBs and neutrinos

Less challenging than GW alerts (not 1000sq.deg.)
for the tile scheduling but much more alerts (2
alerts every 3 days for GBM).

Discussion !
