

# Clustering of the eBOSS quasar sample in Fourier space

Richard Neveux, CEA - Saclay  
PhD student

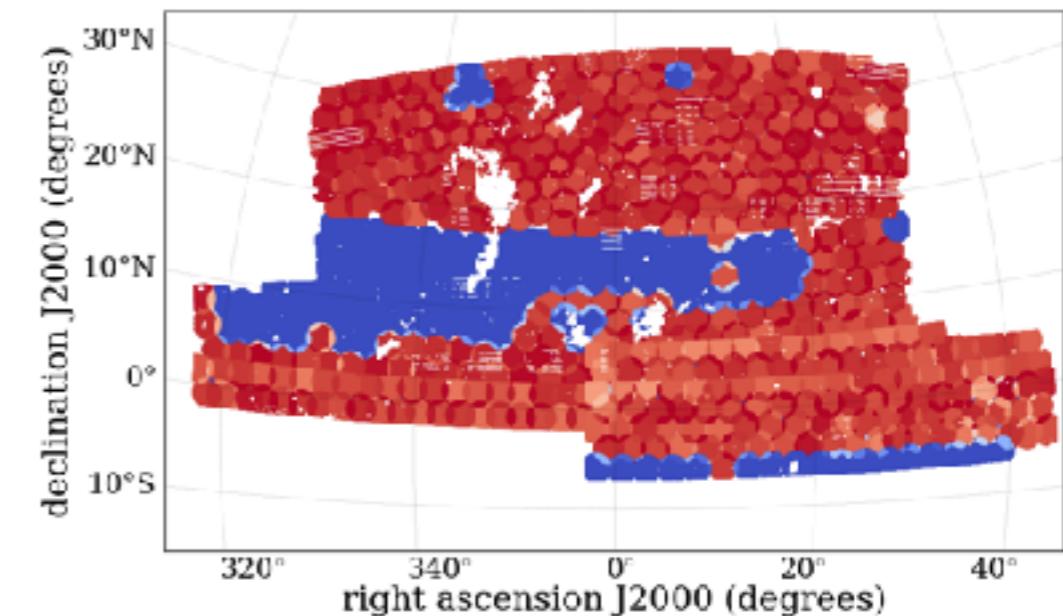

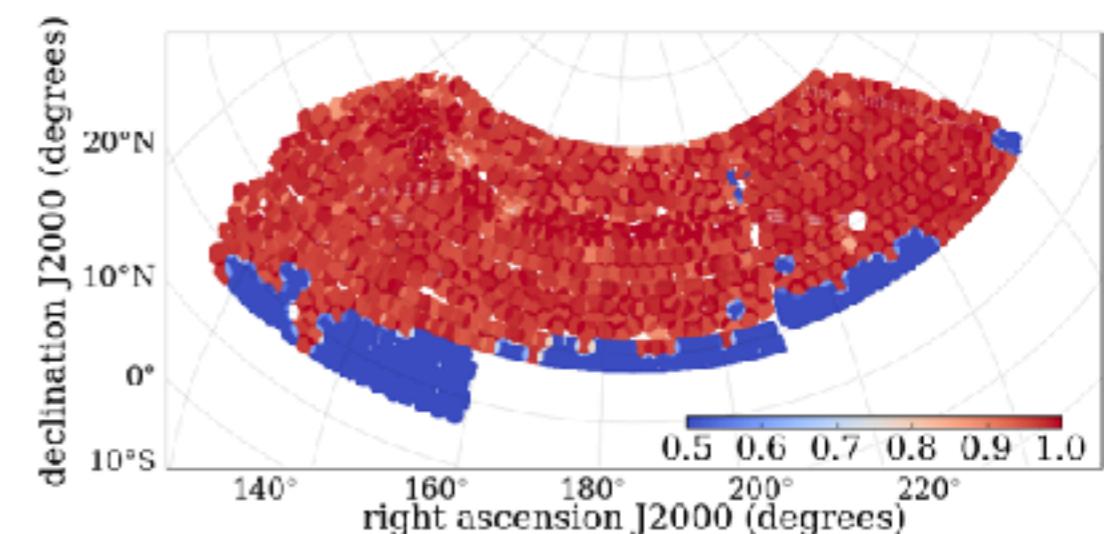

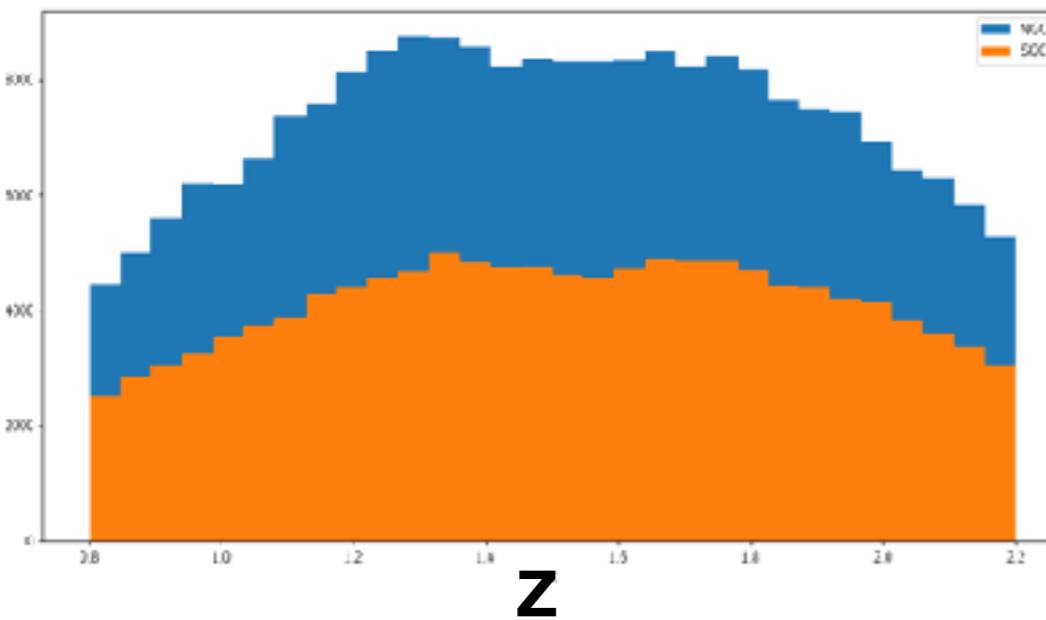

eBOSS/DESI meeting  
Saclay - April 7, 2019

# Data v5

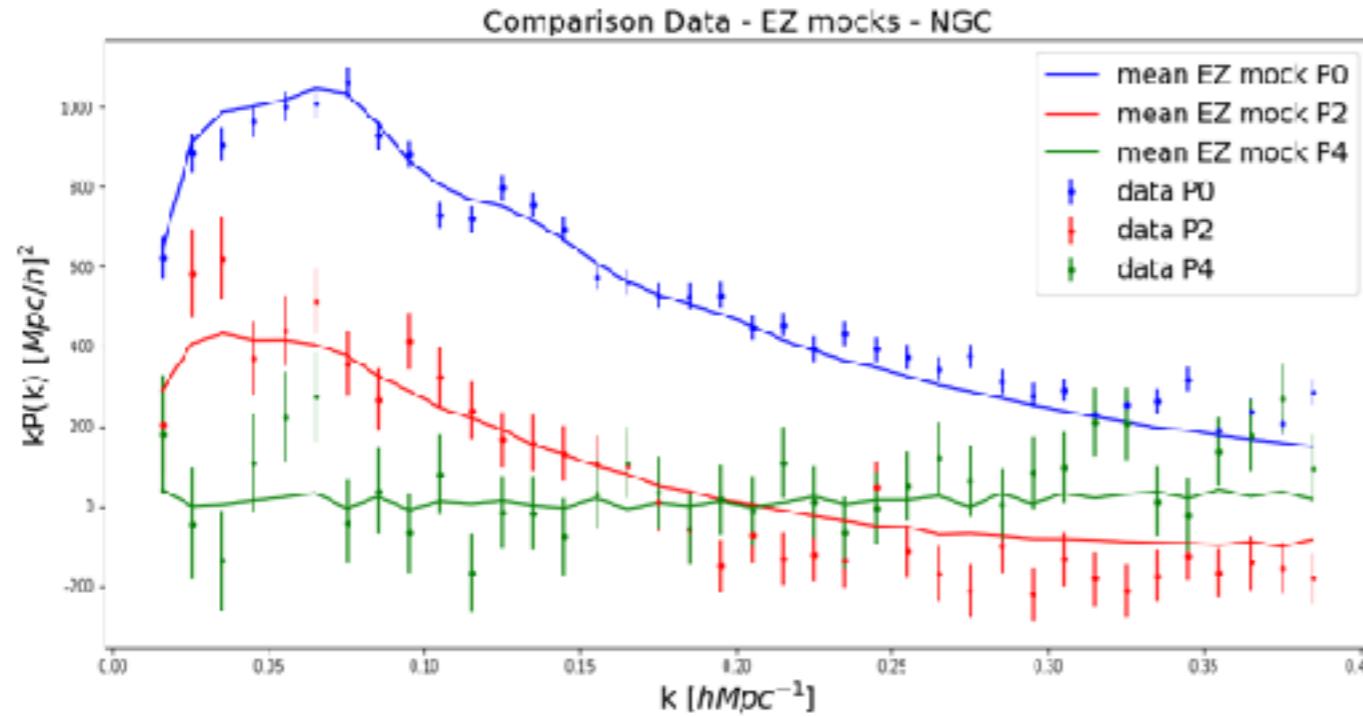

- Mean  $N(z)$  [ $\text{h}/\text{Mpc}^3$ ]  $\sim 1.74 \cdot 10^{-5}$  (NGC) &  $1.58 \cdot 10^{-5}$  (SGC)
- Mean redshift  $\sim 1.52$

**Survey area [deg $^2$ ]**

	NGC	SGC	Total
DR14	1214.6	898.3	2212.9
DR16	2843.5	1825.2	4668.7

# Data v5

- BAO analysis :  
Fit with  $k$ -range = [0.02,0.23]
- Full shape analysis :  
Fit with  $k$ -range = [0.02,0.3]
- Data are in agreement with EZ mocks  
on BAO analysis  $k$ -range, small differences  
above  $k=0.25$  h/Mpc

# BAO analysis

- Wiggle / No-wiggle technique
- Measurement of the isotropic alpha

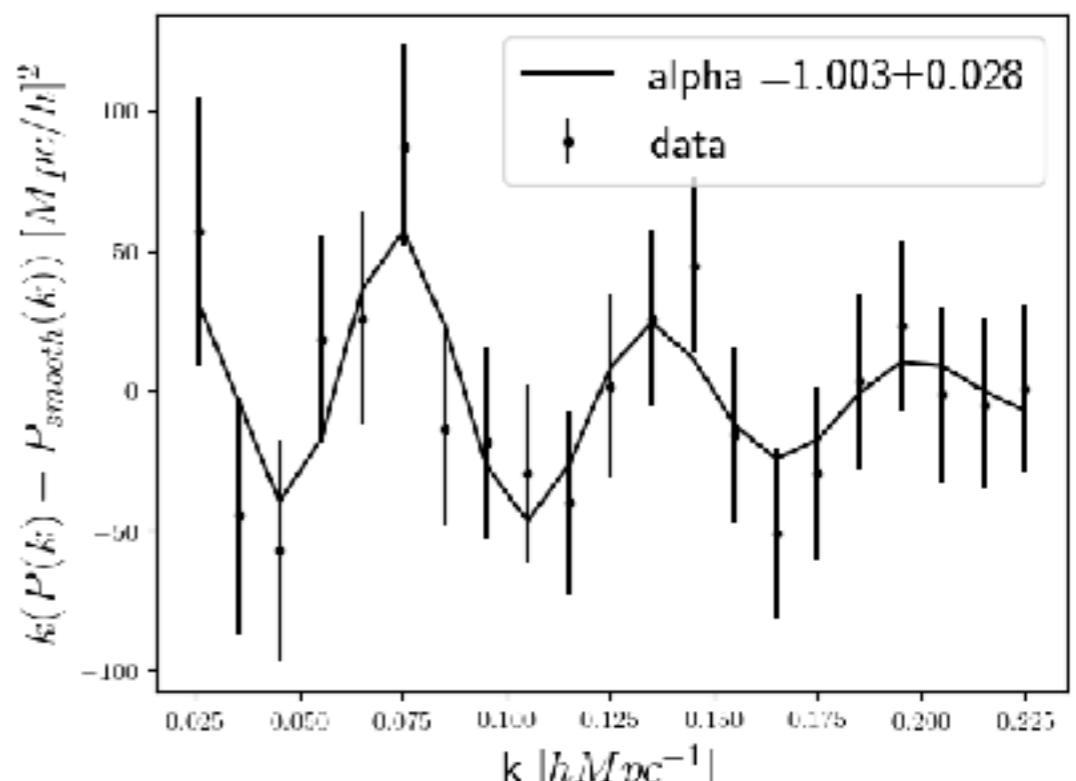

$$P(k) = P_{sm} \left\{ 1 + [\mathcal{O}_{lin}(k/\alpha) - 1] e^{-1/2 \Sigma_{nl}^2 k^2} \right\}$$

$$P_{sm}(k) = B^2 P_{nw}(k) + A_1 k + A_2 + A_3 k^{-1}$$

$$\mathcal{O}_{lin}(k/\alpha) = P_{lin}/P_{nw}$$

$$\alpha = \frac{D_V(z)r_d^{fid}}{D_V^{fid}(z)r_d}$$

Example of the fit on one EZ mock

# Full shape analysis

- TNS Model implemented by Arnaud de Mattia
- Window function treatment (Wilson et al. 2016)
- Anisotropic case

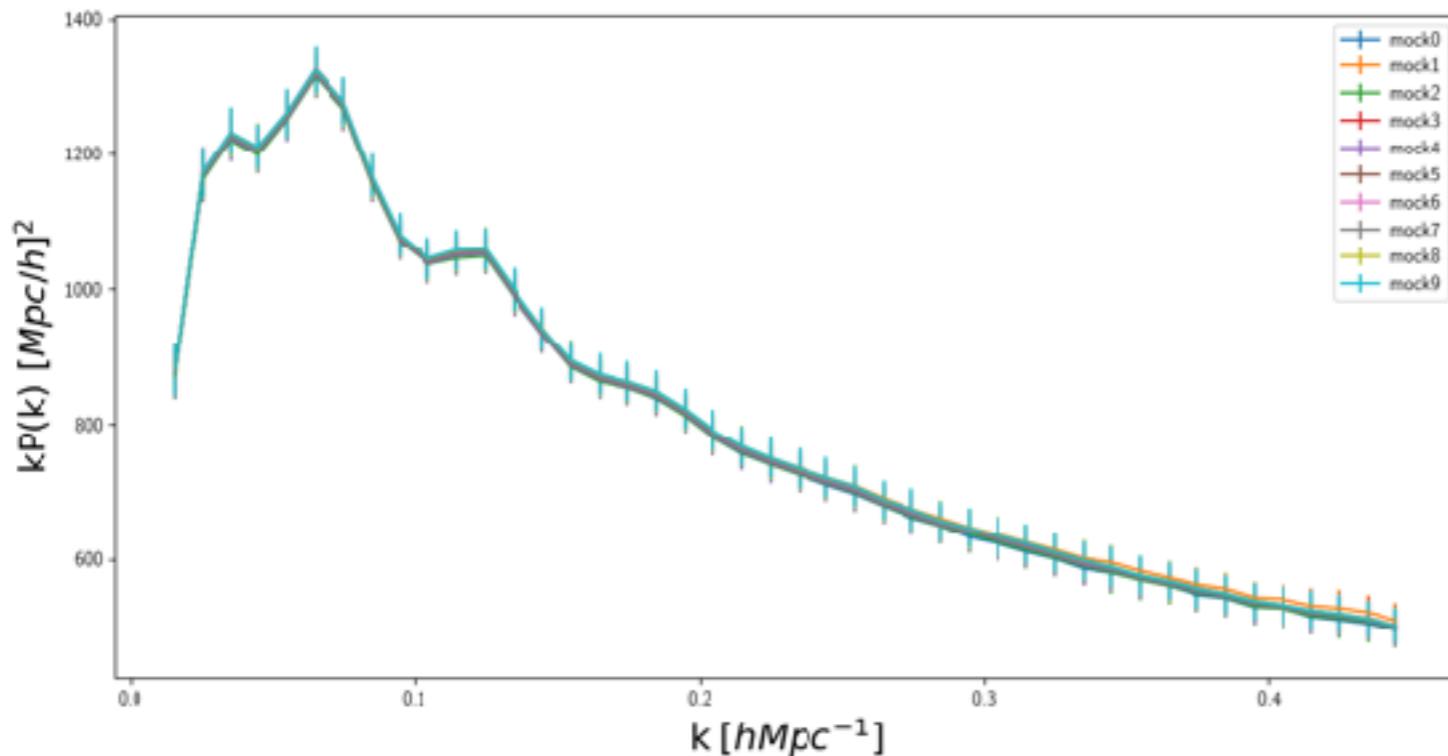

$$\alpha_{\perp} = \frac{D_A(z)r_s^{\text{fid}}}{D_A^{\text{fid}}(z)r_s} \quad \alpha_{\parallel} = \frac{H^{\text{fid}}(z)r_s^{\text{fid}}}{H(z)r_s} \quad f(z) \simeq (\Omega_m(z))^{\gamma}$$

# Analysis of the quasar OuterRim mocks - periodic power spectrum

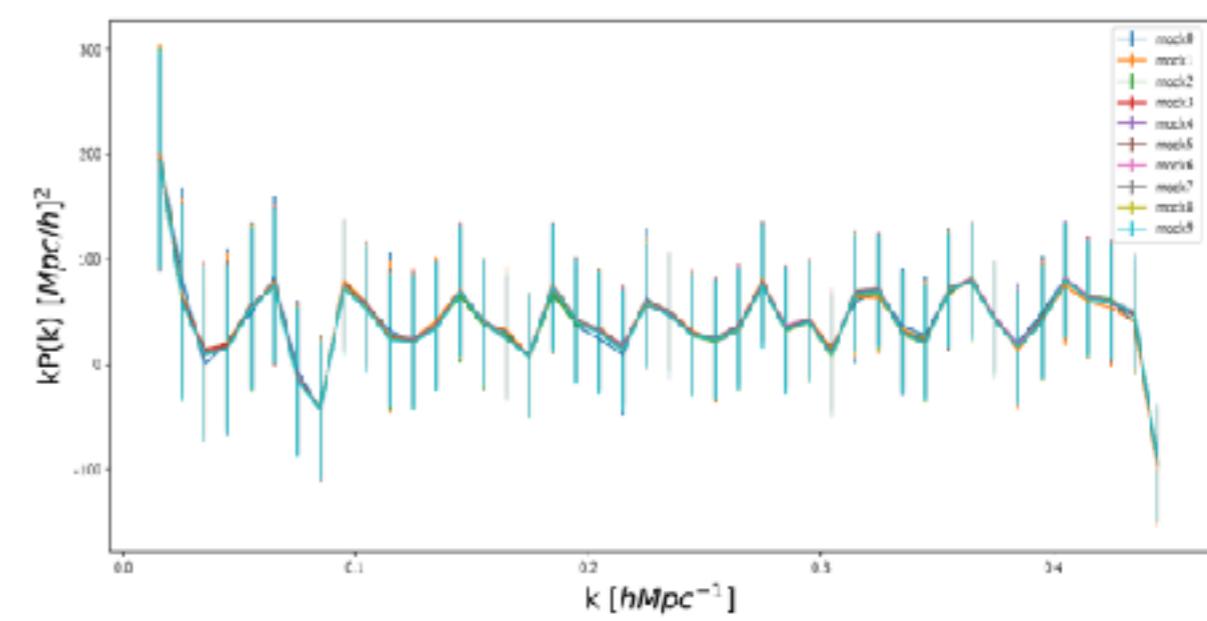

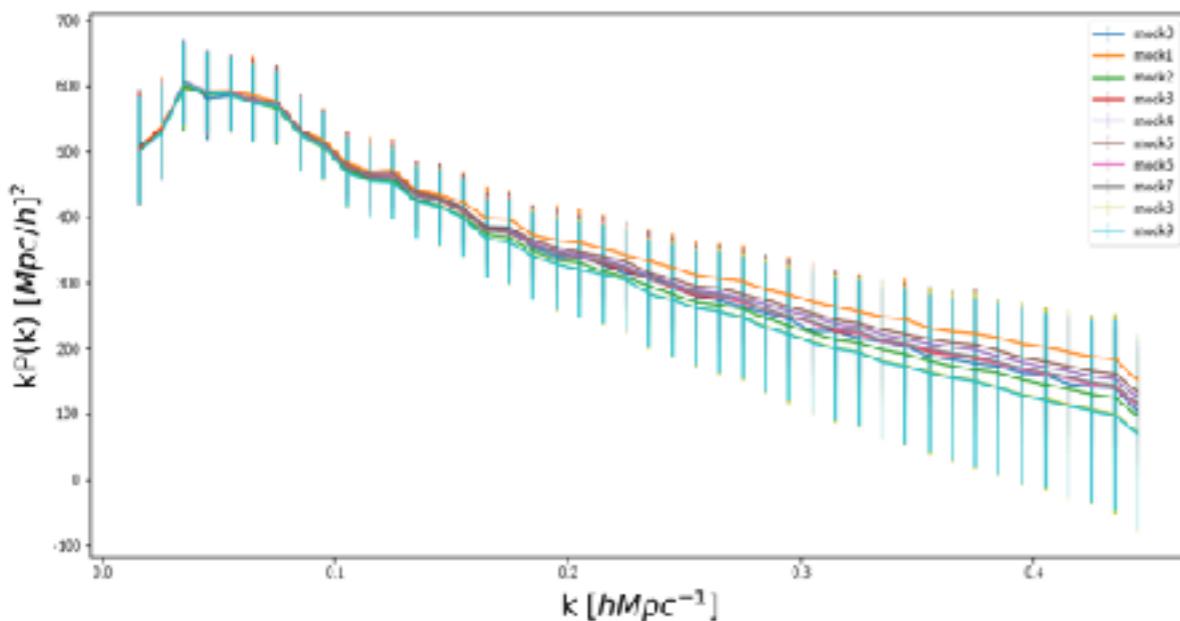

- 1 snapshot of the OuterRim box ( $L=3\text{Gpc}$ ,  $z=1.433$ ) with different HODs implemented by Alex Smith
- Periodic power spectrum
- Gaussian covariance matrix

	Mock0	Mock1	Mock2	Mock3	Mock4	Mock5	Mock6	Mock7	Mock8	Mock9
HOD	Smooth Step + PL	Gaussian	Top hat + PL	Gaussian + PL	Smooth Step + PL	Sharp Step + PL	Gaussian + PL	Top hat + PL	Gaussian	Sharp Step + PL
Satellites positions	Particles	NFW	NFW	Particles	NFW	NFW	NFW	Particles	NFW	NFW
Satellites %	19 %	7 %	60 %	21 %	8 %	17 %	56 %	24 %	100 %	42 %

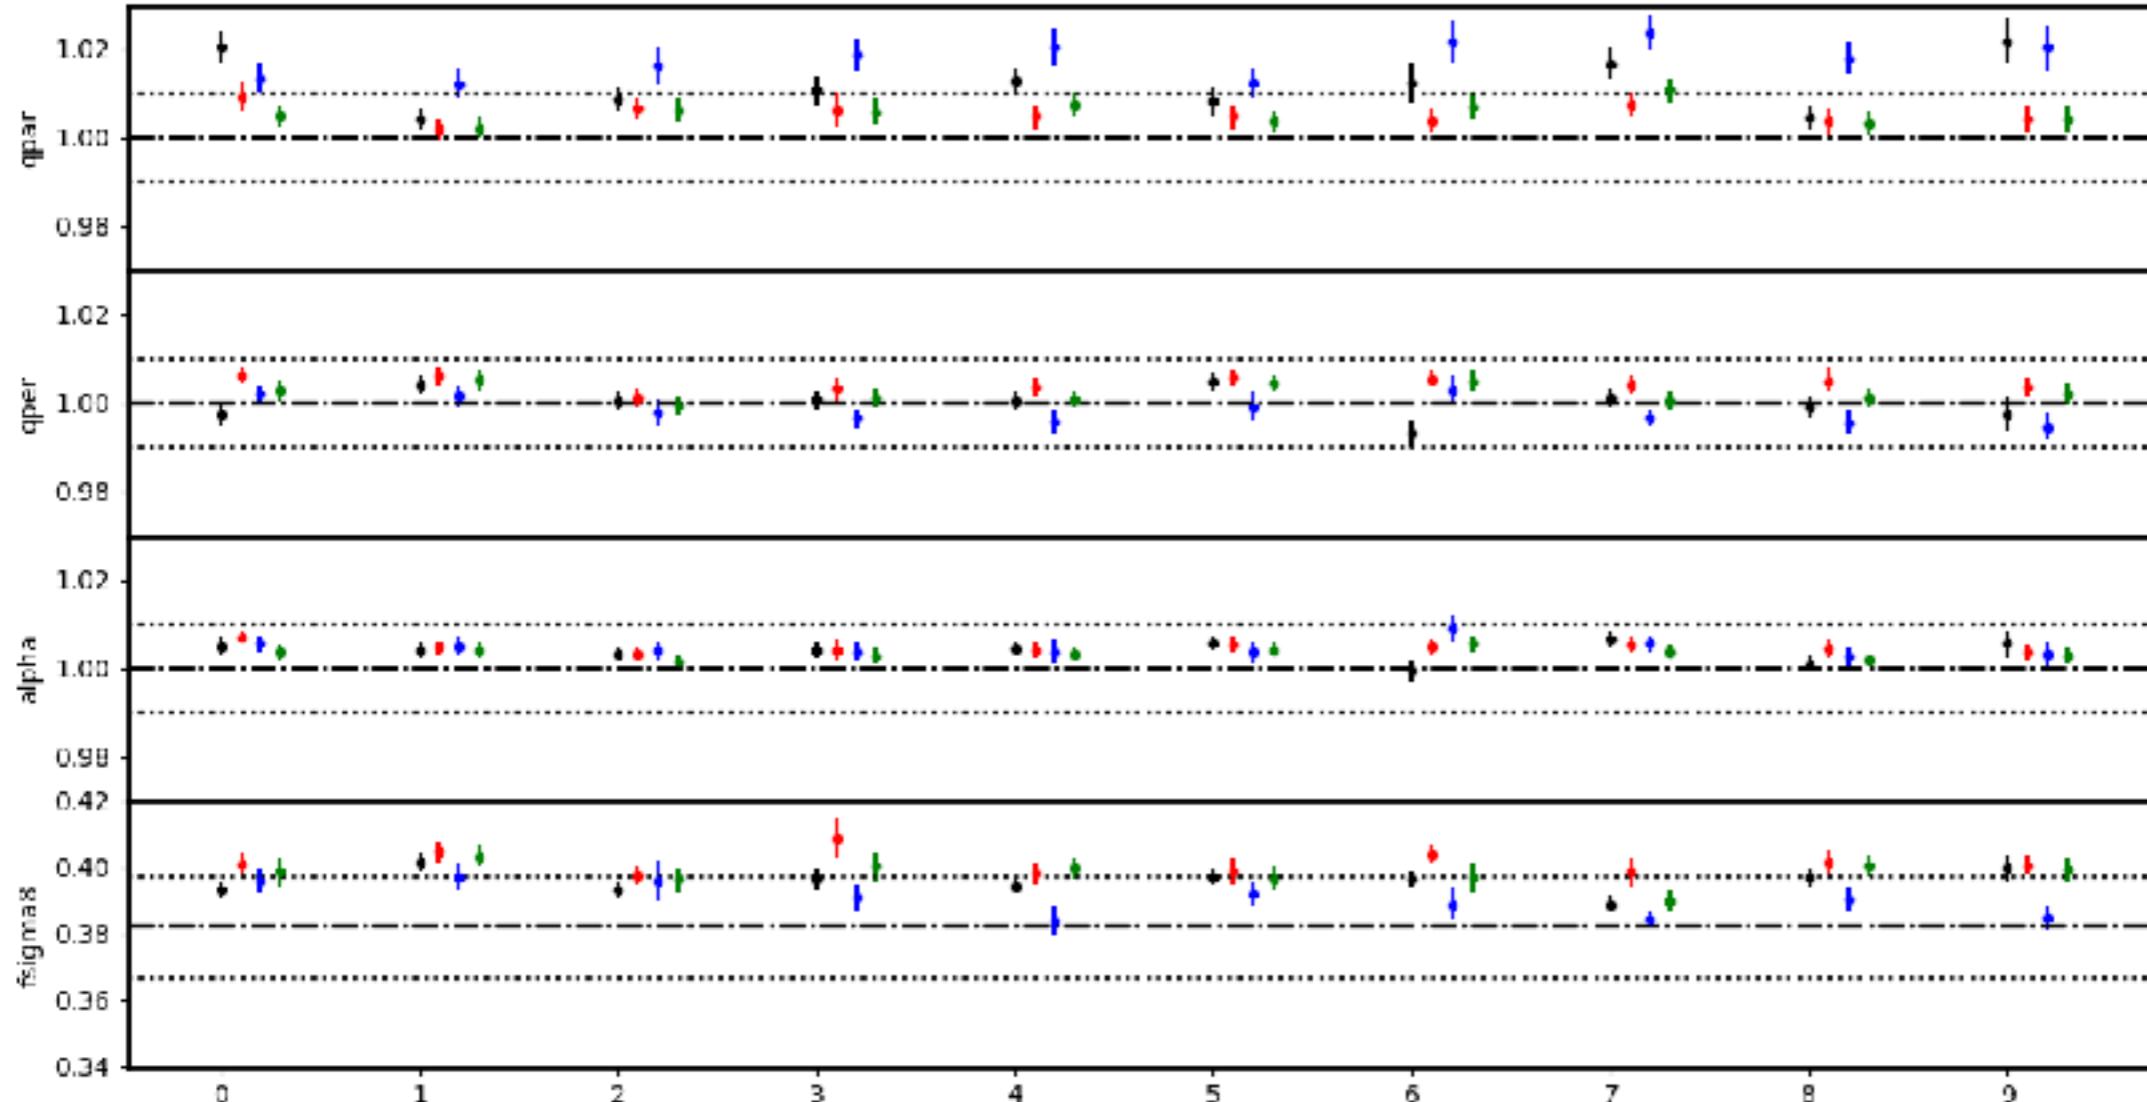

# Analysis of the quasar OuterRim mocks - periodic power spectrum

- Power spectrum in the no smearing case with different HOD
- All are consistent, small differences on small scales as expected

# Analysis of the quasar OuterRim mocks - periodic power spectrum - Full shape

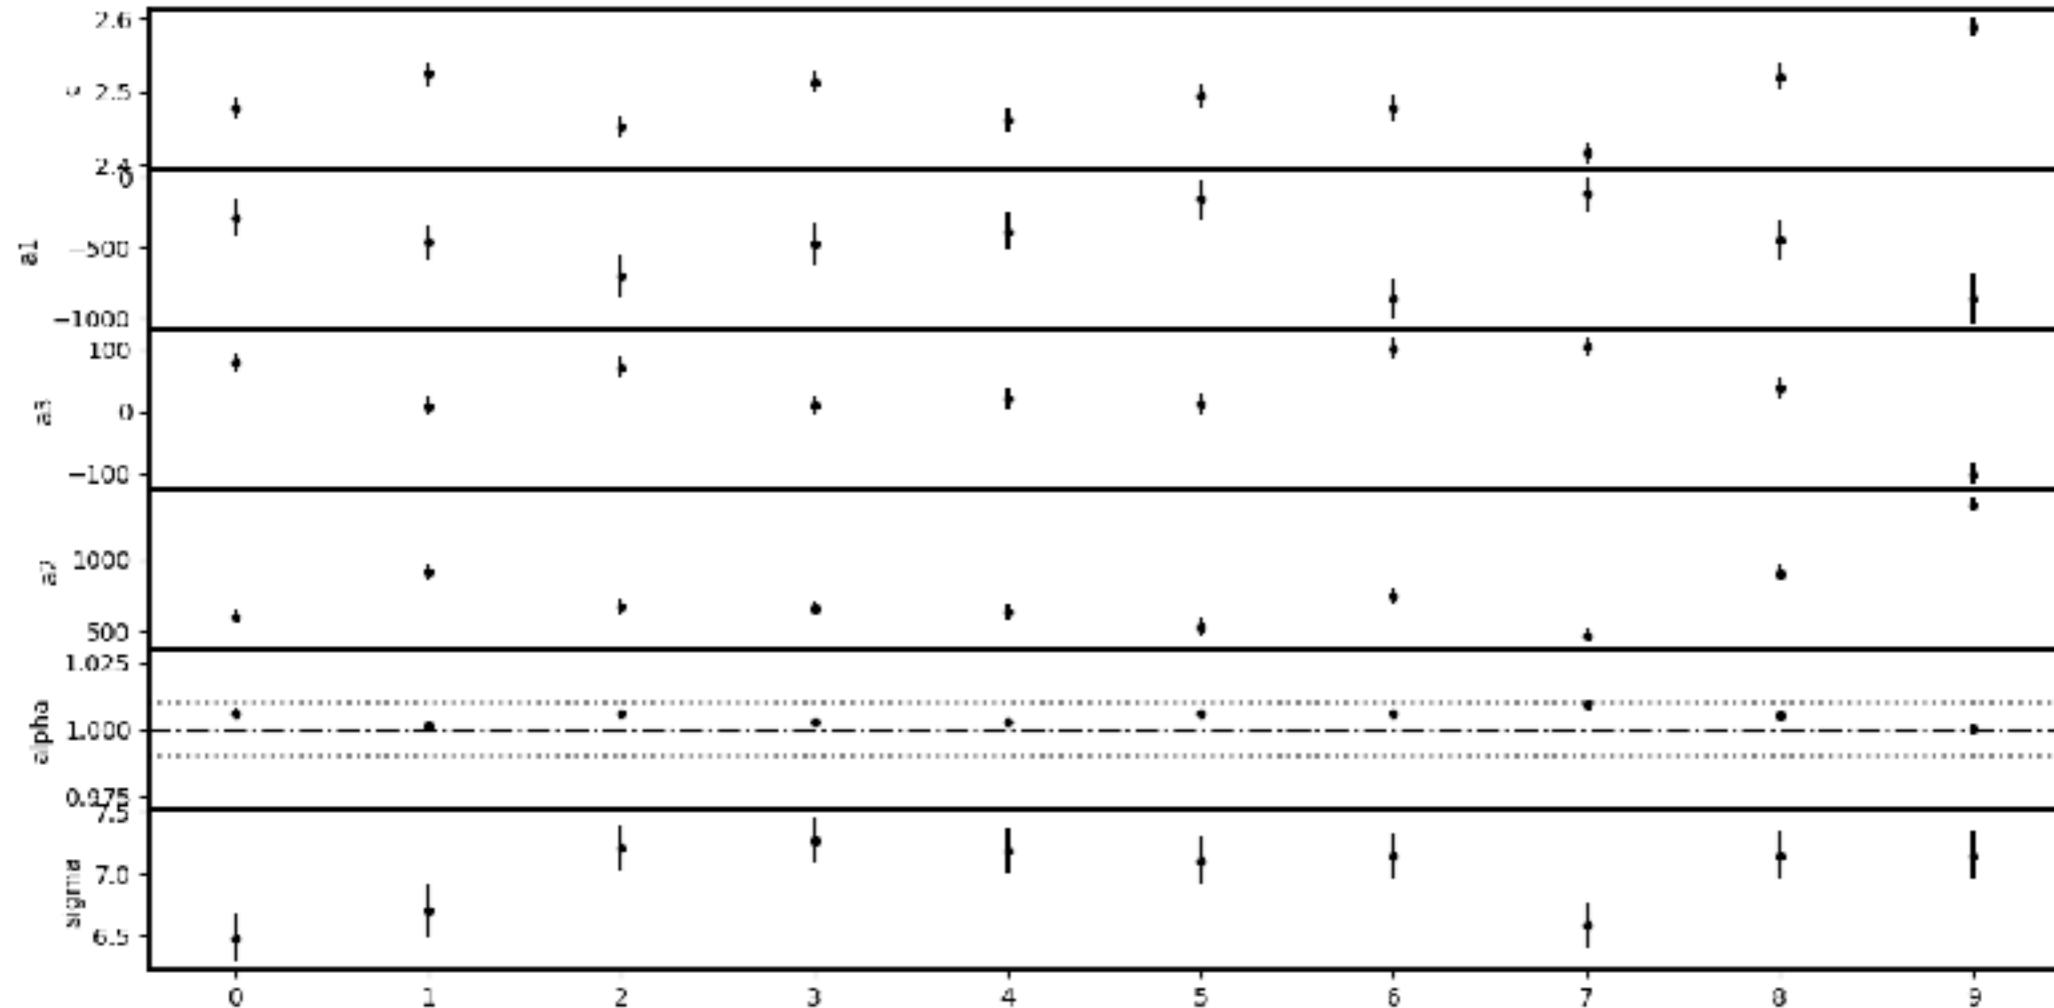

kmin=0.02 kmax=0.3 (for  $l=0,2$ ) 0.2 (for  $l=4$ ) no Ag  
 kmin=0.02 kmax=0.3 (for  $l=0,2$ ) 0.2 (for  $l=4$ )  
 kmin=0.02 kmax=0.3 (for  $l=0,2$ ) no hexadecapole  
 kmin=0.05 kmax=0.3 (for  $l=0,2$ ) 0.2 (for  $l=4$ )

$$\alpha = \alpha_{\parallel}^{2/3} * \alpha_{\perp}^{1/3}$$

Dotted lines :  $\pm 1\%$  for alphas  
 $\pm 4\%$  for  $f\sigma_8$

**DR16 errors :**  
 $\alpha_{\parallel} \sim 3-4\%$   
 $\alpha_{\perp} \sim 2.5\%$   
 $f\sigma_8 \sim 9\%$

# Analysis of the quasar OuterRim mocks - periodic power spectrum - “BAO analysis”

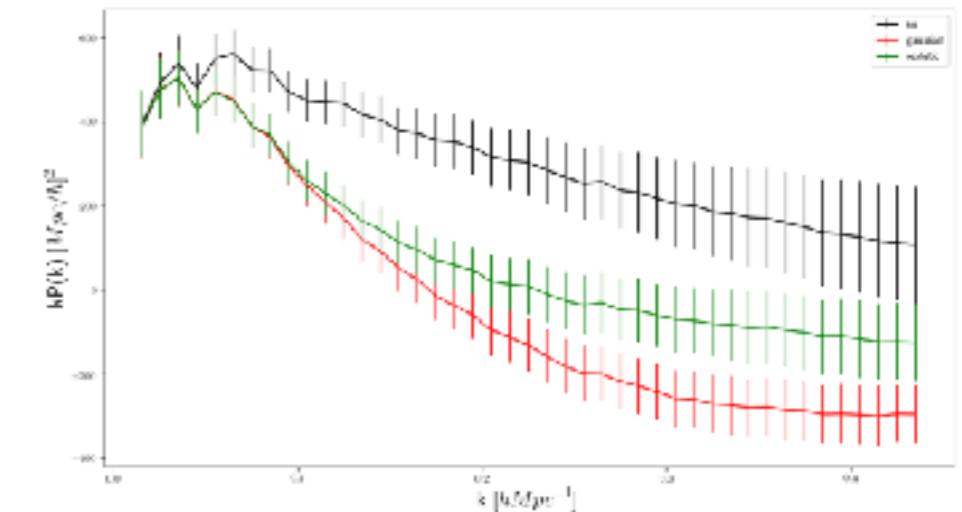

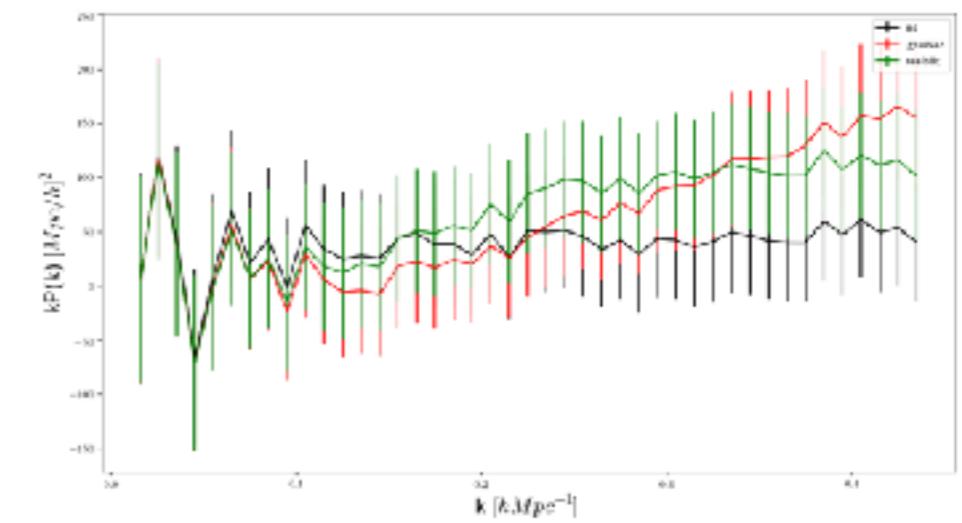

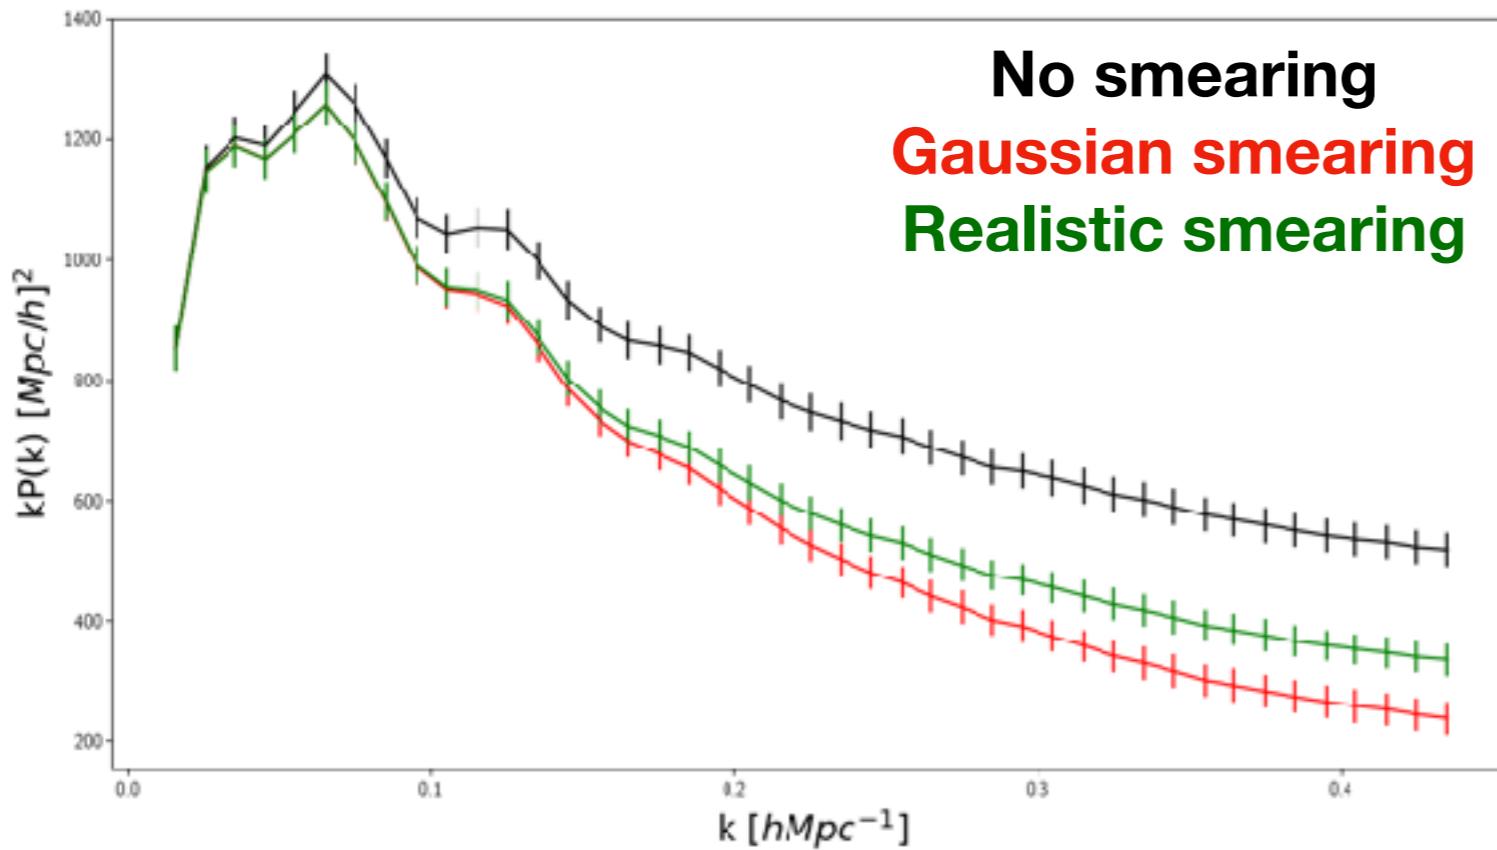

Alphas for all versions are within 0.8%

Dotted lines : +/- 1% for alphas  
Data error :  $\alpha = 2\%$

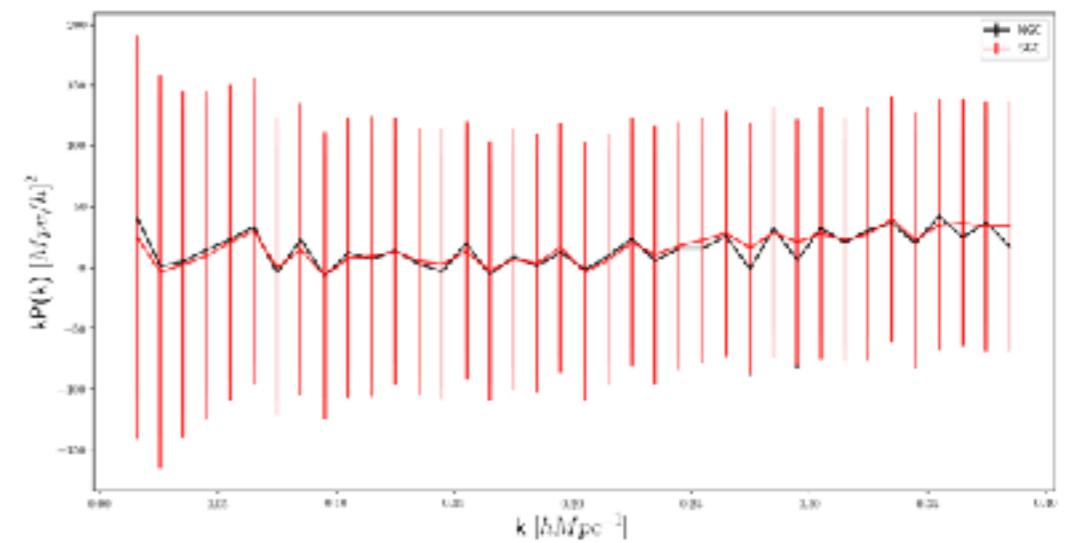

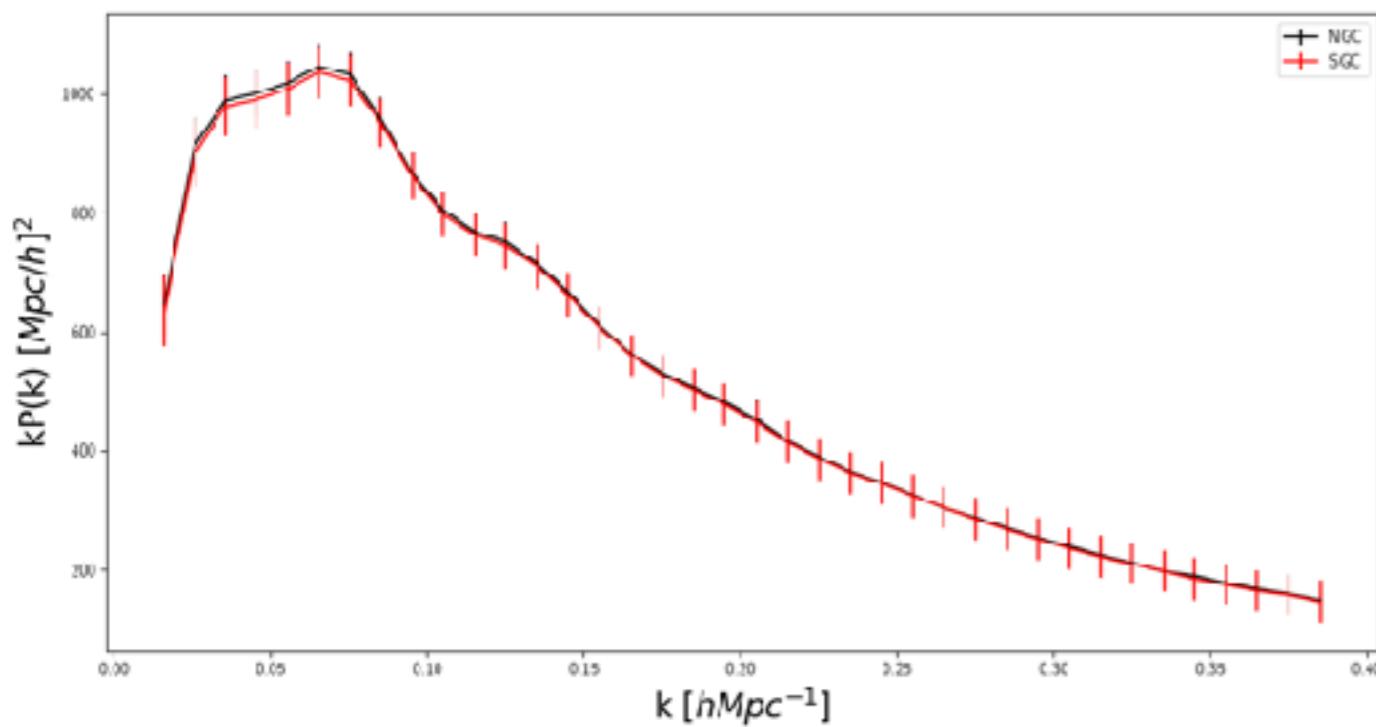

# OuterRim survey-like analysis

- RA, DEC, Z
- With window functions and wide angle corrections (Beutler et al. 2018)
- Covariance matrix from mocks
- Realistic smearing case : double gaussian

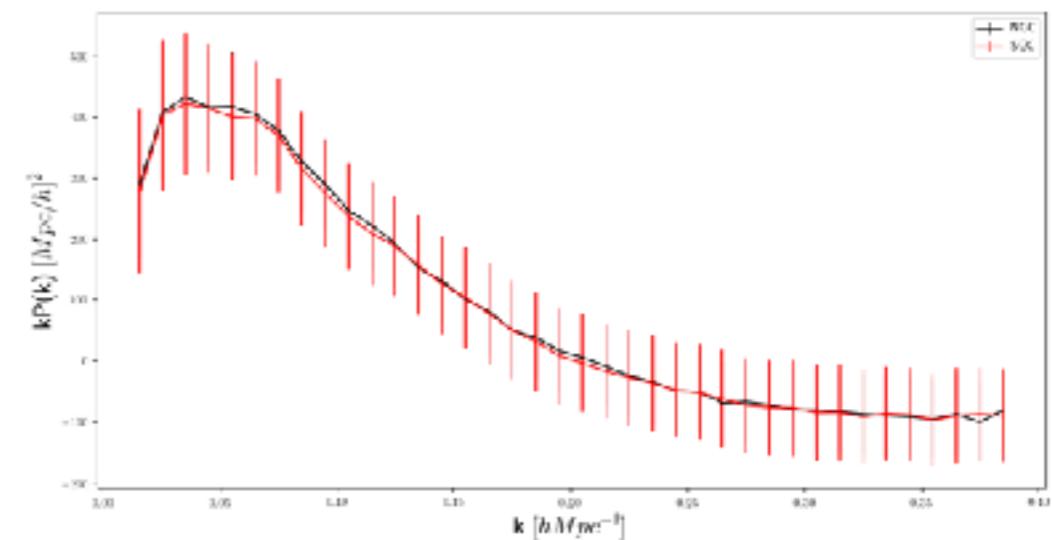

# EZ mocks

- 1000 EZ mocks with data v5 geometry

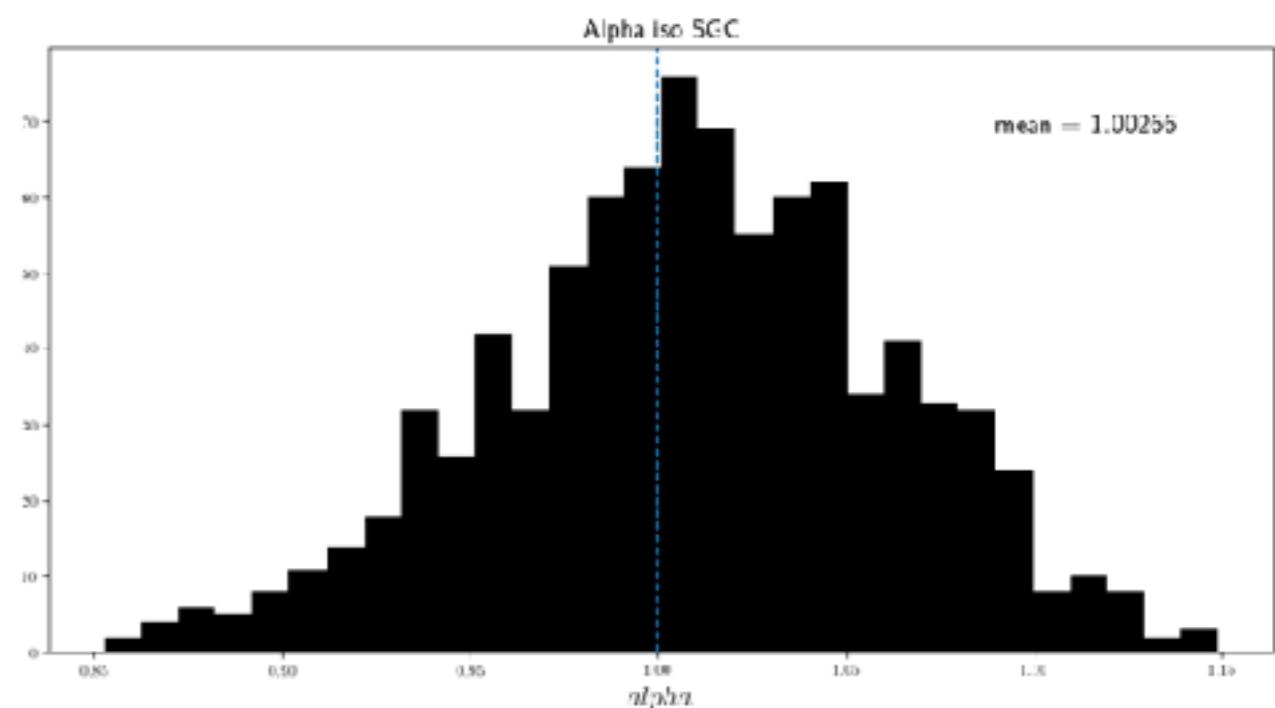

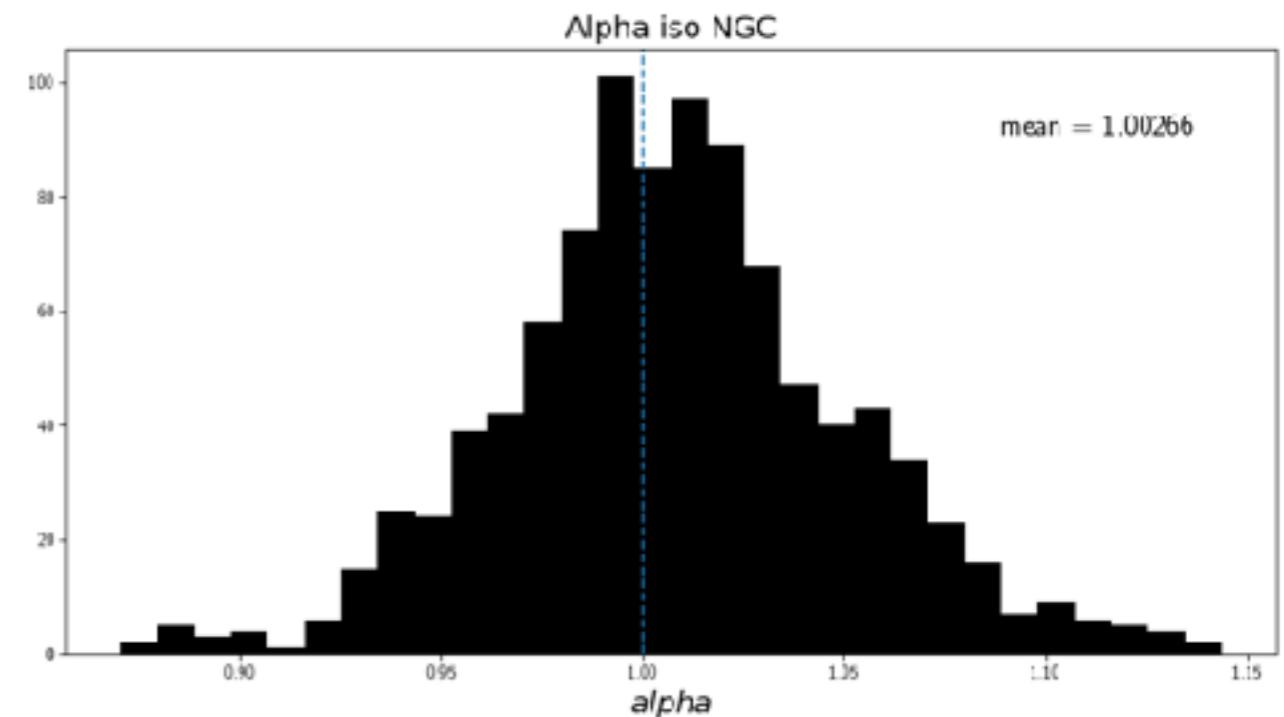

Mean of the NGC and SGC mocks are very similar

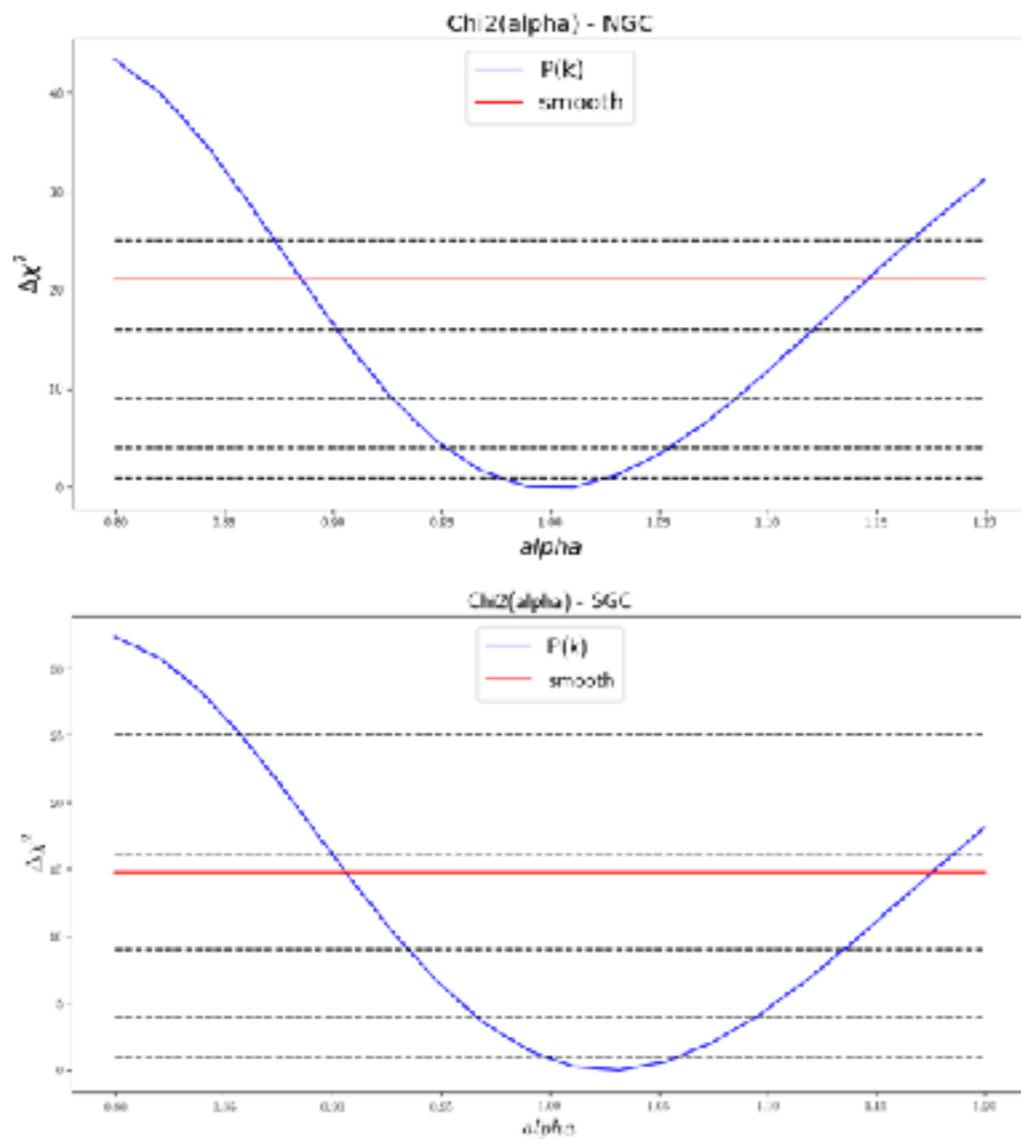

# EZ mocks - BAO

	NGC	SGC
<b>Average <math>\alpha</math></b>	1.00822	1.00939
<b>Average <math>\alpha</math> weighted by <math>1/\text{error}^2</math></b>	1.00266	1.00266

Expected value  $\alpha = 1.00101$

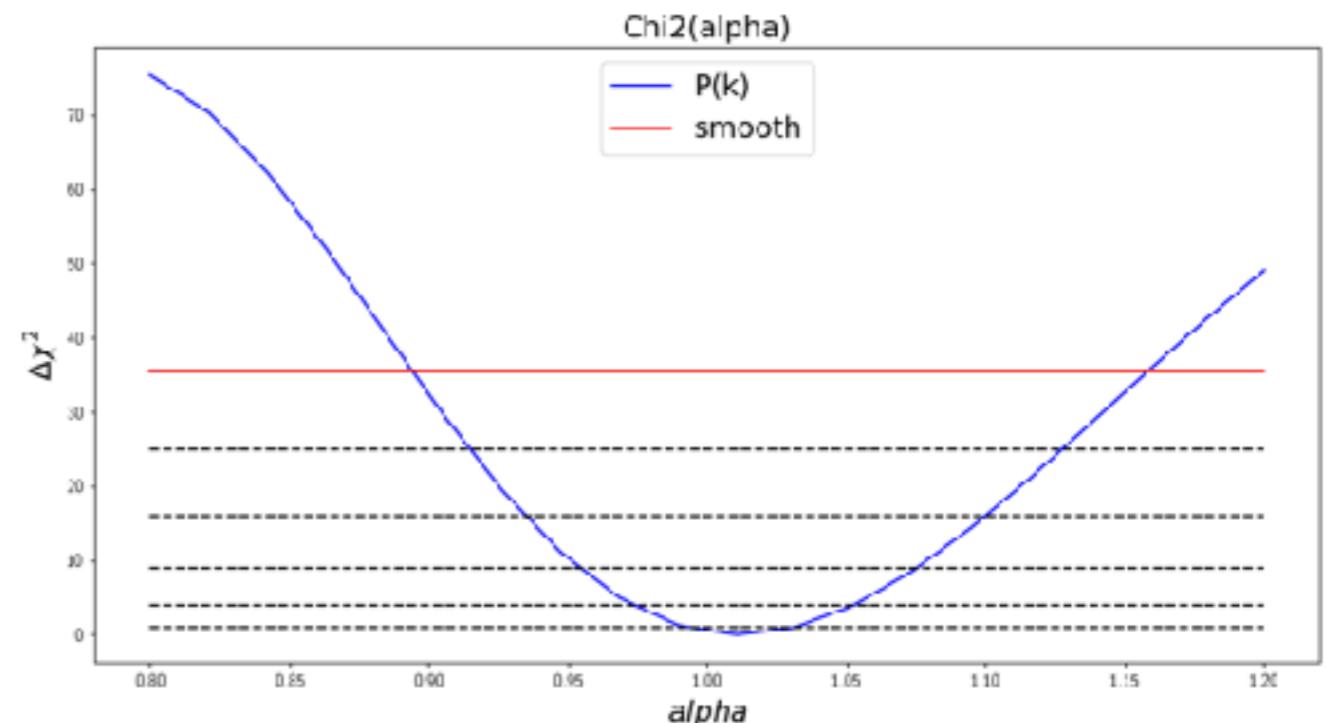

# Data v5 Errors

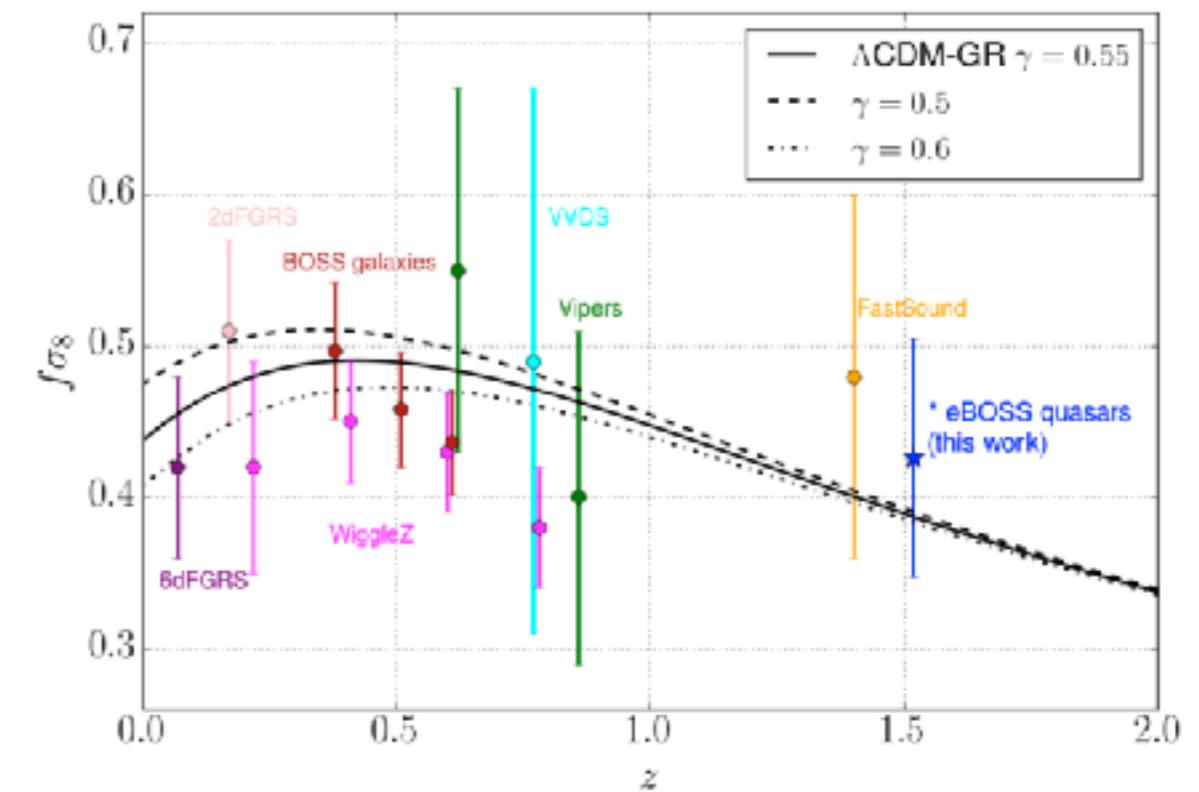

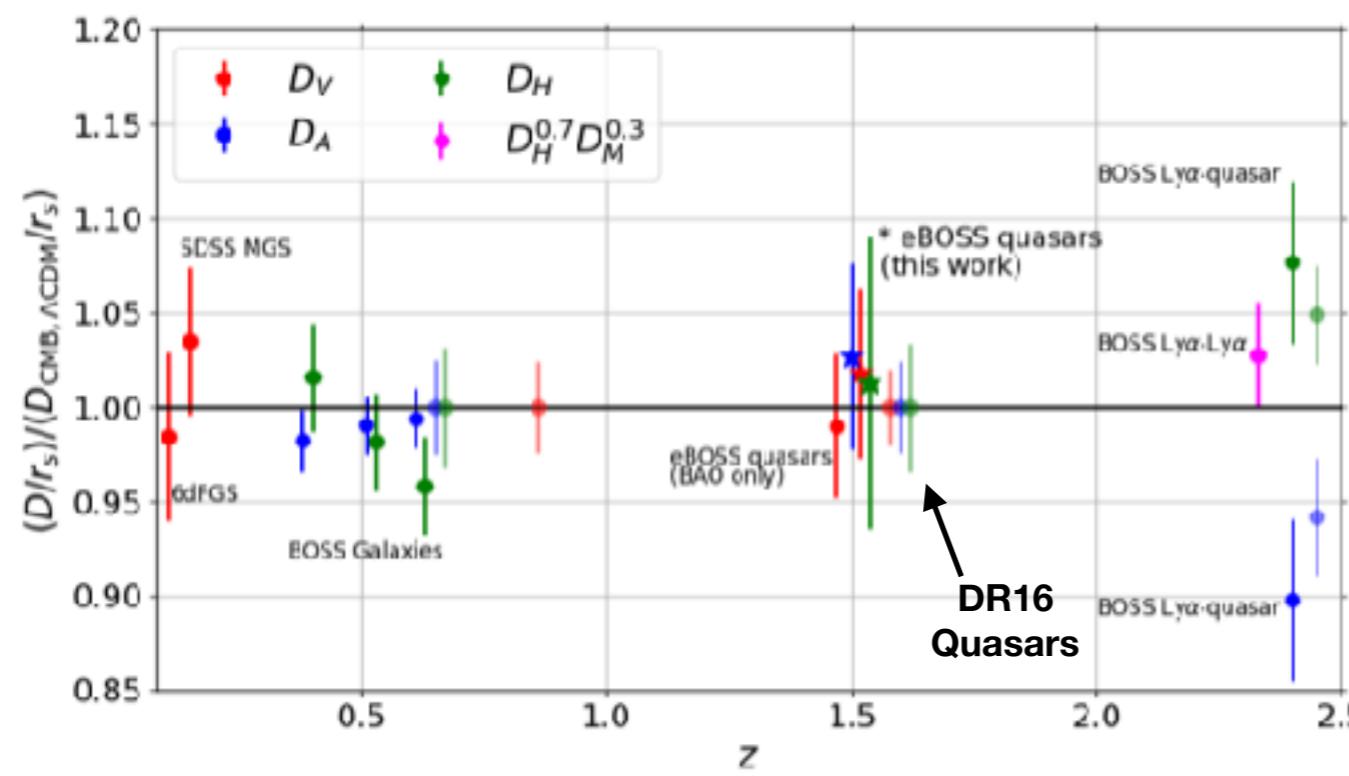

**Dotted lines : sigma level**  
**Chi2 scan**  
**Chi2 value for fit without BAO wiggles**

Data errors				
	BAO	Full shape		
DR14	$a_{\text{iso}}$	$f\sigma_8$	$a_{\text{par}}$	$a_{\text{perp}}$
DR16	~0.020	~0.034 (9%)	~0.031	~0.022

**Preliminary results**

# Impact of eBOSS DR16 quasars

# Summary

- OuterRim mocks :
  - ~0.7% error on alphas for the full shape case with periodic power spectrum
  - 3-4% error on  $f\sigma_8$  with the periodic power spectrum
  - To do :
    - Study systematic shifts on  $f\sigma_8$
    - Analyse OuterRim with different smearing cases (gaussian and realistic)
- EZ mocks :
  - $\alpha_{\text{iso}}$  shift <0.3% for BAO analysis
  - To do :
    - Work on the full shape analysis
- Data :
  - BAO errors:  $\sigma_\alpha \sim 0.02$
  - Full shape errors:  $\sigma_{f\sigma_8} \sim 0.034$   $\sigma_{\alpha_{\parallel}} \sim 0.031$   $\sigma_{\alpha_{\perp}} \sim 0.022$
