

# Overview on Spark activities

C. Arnault, G. Barrand, J.E. Campagne, J. Peloton and S. Plaszczynski

*LAL, Univ. Paris-Sud, CNRS/IN2P3, Université Paris-Saclay, Orsay, France*

June 5, 2019

# spark-fits

- **BinTables** OK: used, good performances, some issues reported+cured, to be upgraded for scala 2.12
- **Images** available, no compression
  - stack: in contact with DM (@Washington), wait for new Butler
  - commisioning?

## Data analysis

- on CoLoRe LSST10Y ( $6 \cdot 10^9$  gals) : histograms in  $\approx 10s$ , tomographic shells in  $\approx 30s$
- ArXiv:1807.03078 + notebook  
<https://github.com/astrolabsoftware/1807.03078>
- R&D on distributed 2-point function computation (Ahmed)

## DC2

## DESC End-to-End Simulation Workflow

- Responsibility of Cosmological Simulations Working Group
- Responsibility of Survey Simulation Working Group
- Input
- Output delivered to collaboration
- Users

Extra-galactic catalog generation

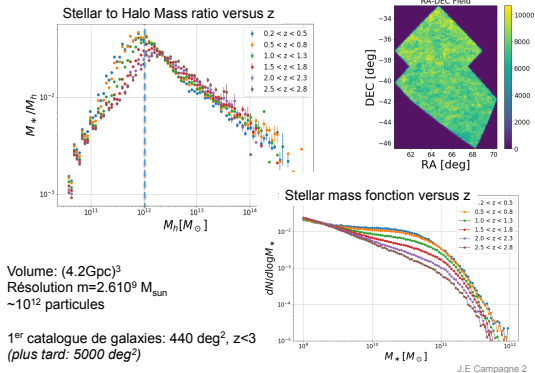

Image simulations

DM processing

## cosmoDC2

see also JP talk.

# Object catalog (DPDD)

(very simple+efficient with Spark) Run1.2p

<https://github.com/LSSTDESC/DC2production/issues/323>

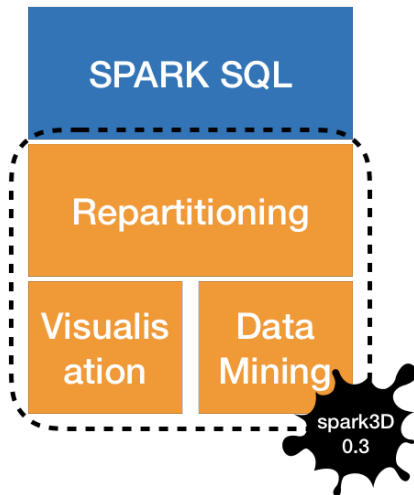

# Syst. maps for $3 \times 2$ pt TF

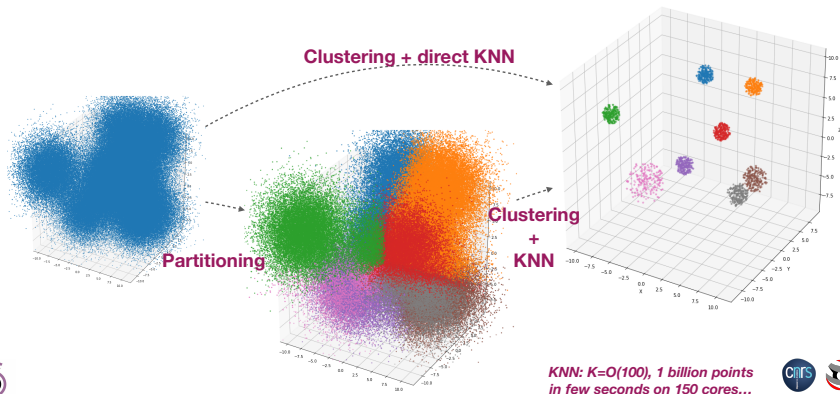

<https://github.com/LSSTDESC/txpipe/blob/master/examples/Syst3x2pt.ipynb>  
+ TXSelector sparkization

# Spark-3D

# spark3D: K Nearest Neighbours

clustering algorithm = k-Means → DBSCAN : recoded in scala

## Catalogs cross-match (join)

- 2D simple with HEALPix indexing → DPDD×Truth (redshift)
- 3D not that simple: key is Spark 3D partitioning (octree)

performances are great/amazing/awesome/...

→paper (multi-cell analysis)

## Beyond 2pt statistics

- shape statistics
- topological characteristics
- Minimum Spanning Tree

# Formation

- DC2-production/DC2-analysis notebooks
- AstroLab tutorials
- LSSTDESC/desc-spark
- Ecole IN2P3 d'informatique (programmation fonctionnelle, 16-20 sep), ecole Euclid (19-31 aout)

# Visualisation

- *inexlib* software : core(C++)+ OpenGL rendering + python (SWIG)
- Linux, Mac, Windows, iOS, Android : laptops, mobiles, tablets, wall of screens...
- client/server mode OK
- bi-directional ports access with `openssh`
- galaxy colors, sizes (ongoing ellipticities)
- standalone (but interfaced to Spark)

# Wall of screen
