

Peculiar velocities with SNeIa

ROMAIN GRAZIANI

LSST France - June 4st - LPC Clermont

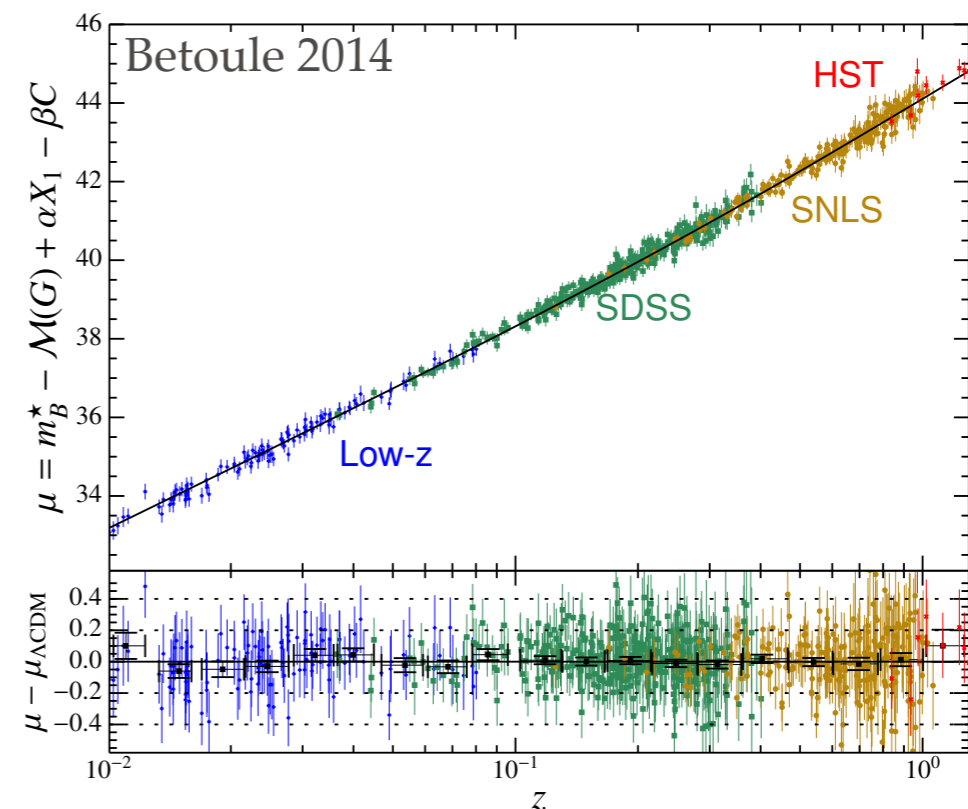

Cosmology at 1st order

The Universe is homogeneous

The Universe is expanding

$$H_0 \chi(\bar{z}) = c \int_0^{\bar{z}} \frac{dz}{(\Omega_m(1+z^3) + \Omega_\Lambda)^{\frac{1}{2}}}$$

Cosmology at 2nd order

The Universe is inhomogeneous

Planck Collab.

Structures perturb the Hubble flow

$$\vec{\nabla} \cdot \vec{v} = -H_0 f \delta$$

$$(1 + z) = \left(1 + \frac{v^r}{c}\right) (1 + \bar{z}(d))$$

CLUES

Large scale structures statistics

Large scale structures statistics

The over density field of matter is a Gaussian random field

$$\langle \delta \rangle = 0$$

$$\langle \delta^2 \rangle = \sigma_8^2 P_0(k)$$

Amplitude of fluctuations

Large scale structures statistics

The over density field of matter is a Gaussian random field

$$\langle \delta \rangle = 0$$

$$\langle \delta^2 \rangle = \sigma_8^2 P_0(k)$$

$$\langle v_\alpha \rangle = 0$$

$$\langle v_\alpha^2 \rangle = (f \sigma_8)^2 \frac{k_\alpha^2}{k^4} P_0(k)$$

Growth rate

Growth rate

Measuring the growth rate

Galaxy redshifts
(DESI?)

$$(1 + z) = \left(1 + \frac{v^r}{c}\right) (1 + \bar{z}(d))$$

**Type Ia SNe
From LSST**

$$\mathcal{L} = -\frac{1}{2} v^{r,T} \mathbf{C}^{-1} v^r - \frac{1}{2} \log |\mathbf{C}|$$

Measuring the growth rate

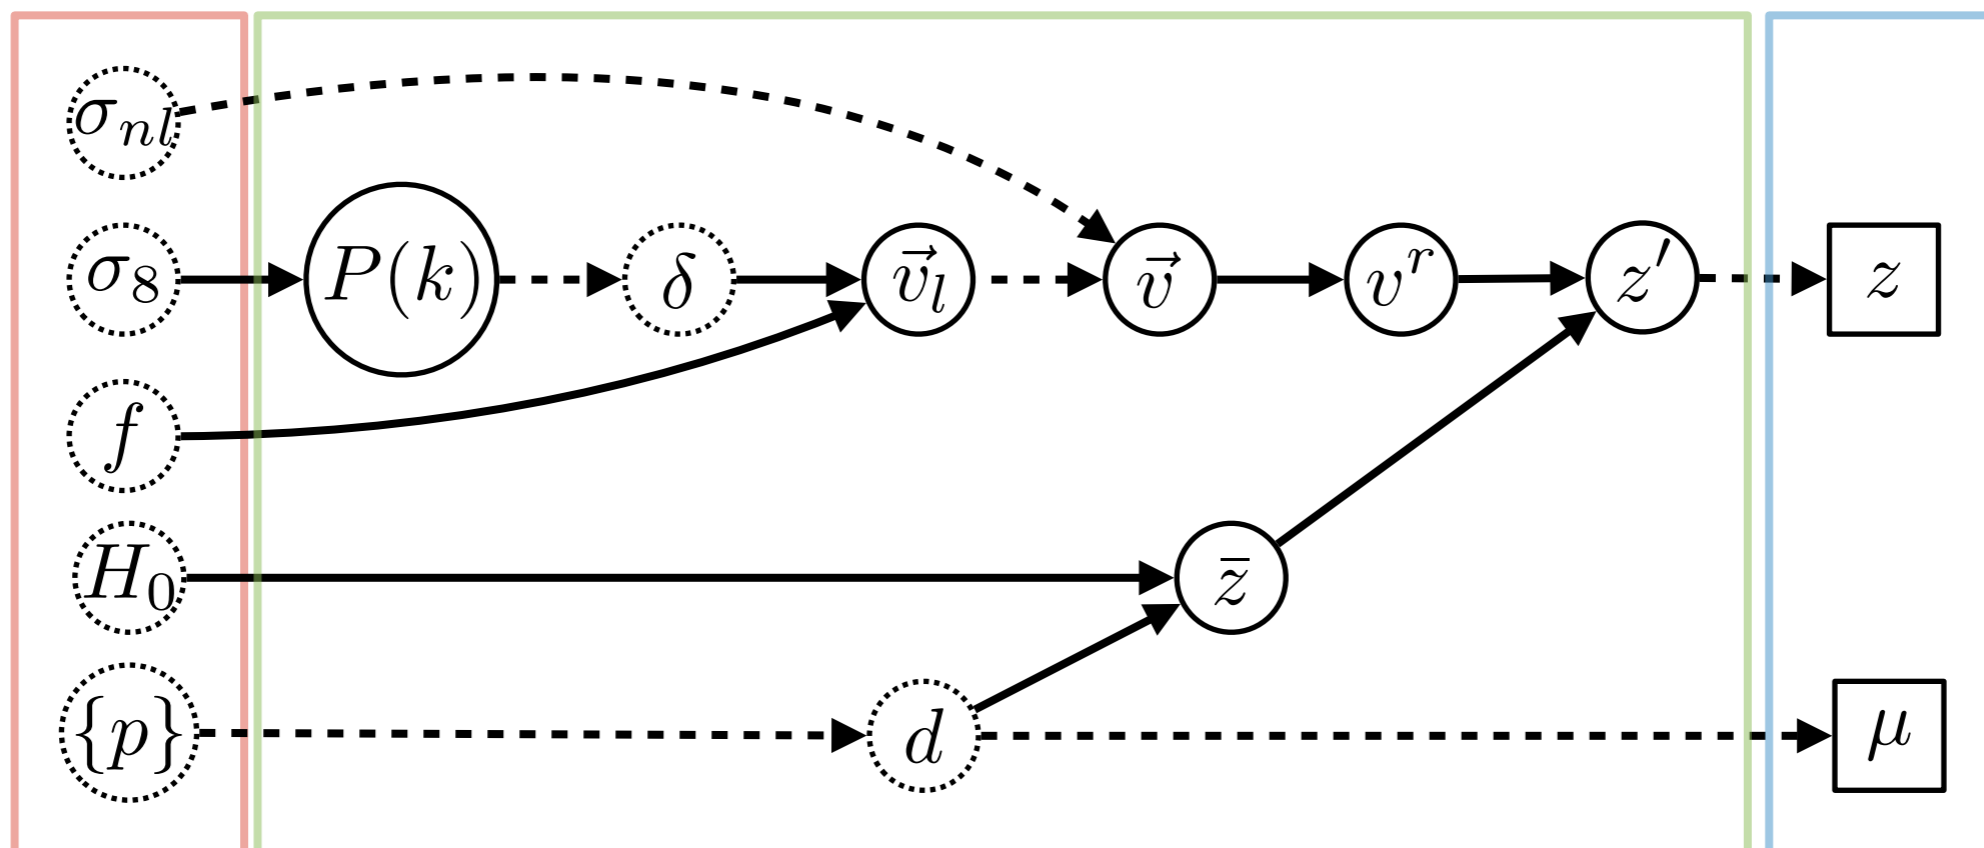

Galaxy redshifts
(DESI?)

$$(1 + z) = \left(1 + \frac{v^r}{c}\right) (1 + \bar{z}(d))$$

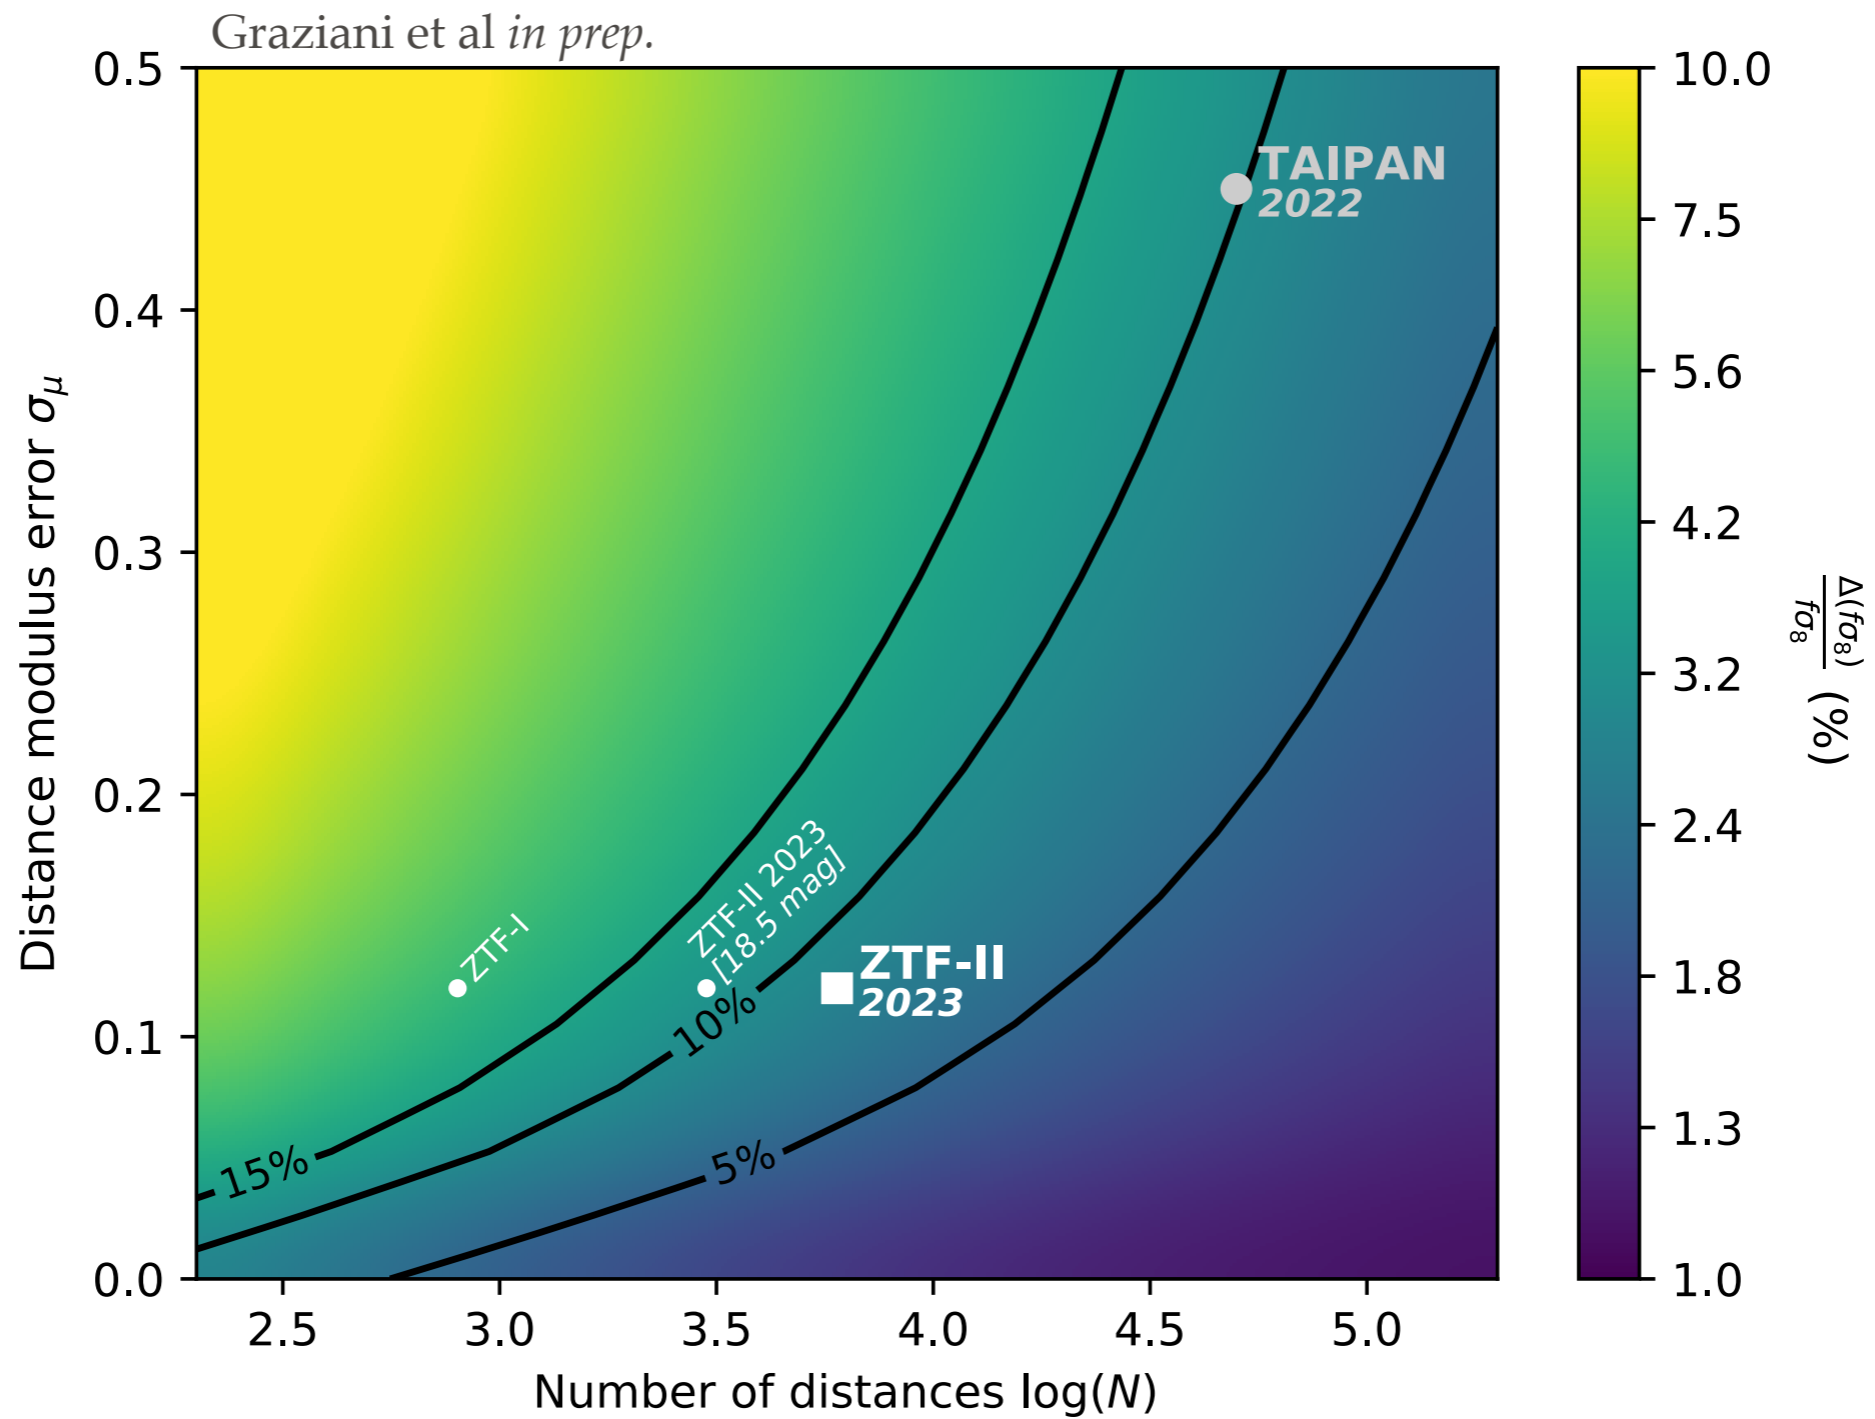

**Type Ia SNe
From LSST**

$$\mathcal{L} = -\frac{1}{2} v^{r,T} \mathbf{C}^{-1} v^r - \frac{1}{2} \log |\mathbf{C}|$$

Forecasts

Example of systematic

Example of systematic

Photometric
inhomogeneity

Bias on
 $f\sigma_8$

Relative calibration

Preliminary: 2000 SNeIa to $z = 0.08$

Possible systematics

Systematics	Status	Importance
Inhomogeneity	✓	Medium?
Saturation	✗	?
Non-linear model	⦿	Medium?
Contamination	⦿	Small
Inhomogeneous Malmquist bias	✓ ⦿	High
Selection effects	✗	?
