LSST-France User Guide

Welcome to the LSST-France User Guide. Here you will find supplemental information to the official LSST documentation specifically about the activities of the LSST community in France.

Note

This space is a permanent work in progress. Please see [How To](#) on how you can help improve it.

GETTING STARTED

- Collaboration tools
 - Project-wide tools
 - LSST-France tools

COMPUTING ENVIRONMENT

- Working Environment at CC-IN2P3
 - Overview
 - How to Get Help
 - Account Setup
 - Operations Status
- Login Farm
- Batch Farm
- Data Storage and File Systems
 - Home directory: `$HOME`
 - Shared group area: `/pbs/throng/lsst`
 - Shared group area (large datasets): `/sps/lsst`
 - Interactive working area: `/scratch`
 - Batch job working area: `$TMPDIR`
 - Archival storage

good place to start for newcomers

You are kindly invited to subscribe to this Slack channel
(please click on the link below)

#in2p3

There are other channels of potential
interest for LSST-France members.

All of them start by #in2p3-*

RESOURCE UTILISATION

- The last quarter every year, every project informs CC-IN2P3 the computing resources required for the upcoming year
in terms of CPU and GPU time, disk storage, tape storage, other services
granularity: quarter of a year
- IN2P3 top management allocates computing resources to each project
- We have established a multi-year plan of resource requirements for the whole duration of the LSST project
that plan is revisited and updated on a yearly basis
the annual expression of requirements sent to CC-IN2P3 is based on that master plan

RESOURCE UTILISATION (CONT.)

LSST @ CC-IN2P3 | CPU capacity allocation vs utilization (HS06 hours)

BATCH ACTIVITY OVERVIEW (users: descprod, groups: lsst)

Allocated CPU capacity largely enough for current needs. The activity is understandably spiky over the year

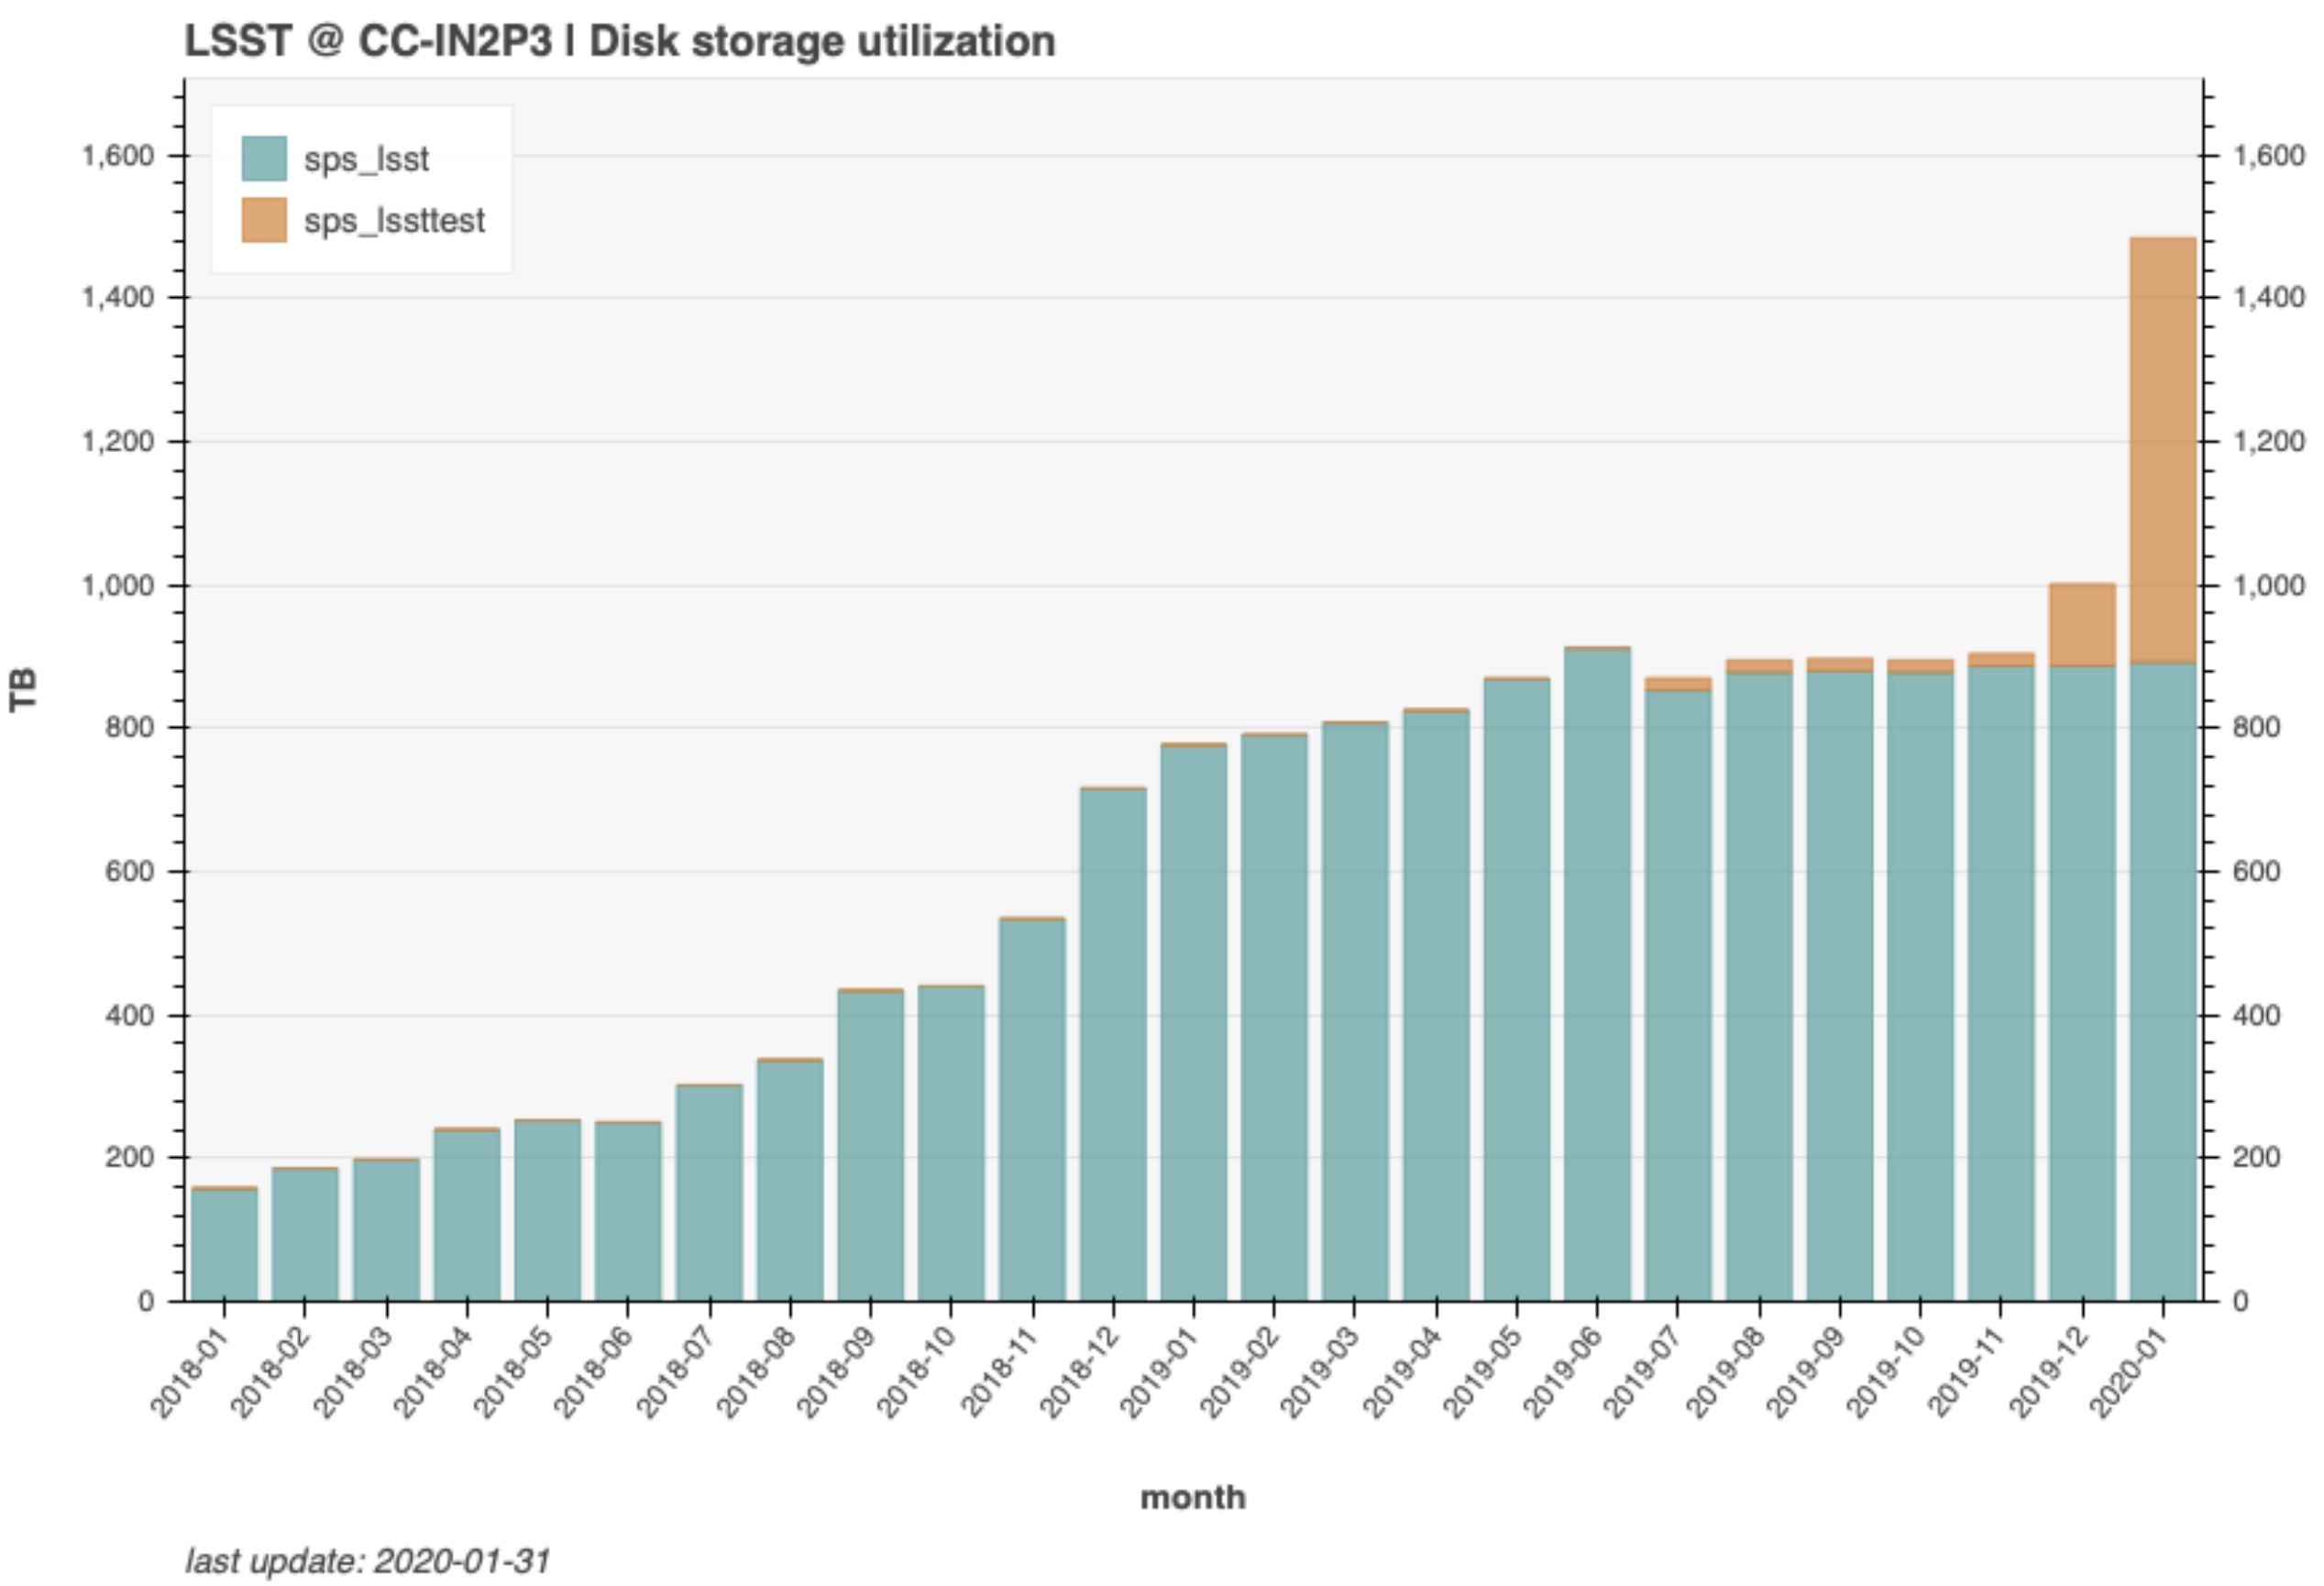

RESOURCE UTILISATION (CONT.)

Delivery of disk storage behind schedule.

Experimenting with storage technologies to find the most suitable for our needs, both technically and economically.

RESOURCE UTILISATION (CONT.)

DATA RELEASE PROCESSING (DRP)

- Data release production (DRP)

*once per year, produce a **data release**: a self-consistent, immutable dataset, composed of data products (both images and catalog) derived from data collected **since the beginning of the survey***

- Realistic exercises of image processing of the LSST science pipelines

using recent versions of the LSST science pipelines to process LSST DESC simulated images

- A lot of experience gained

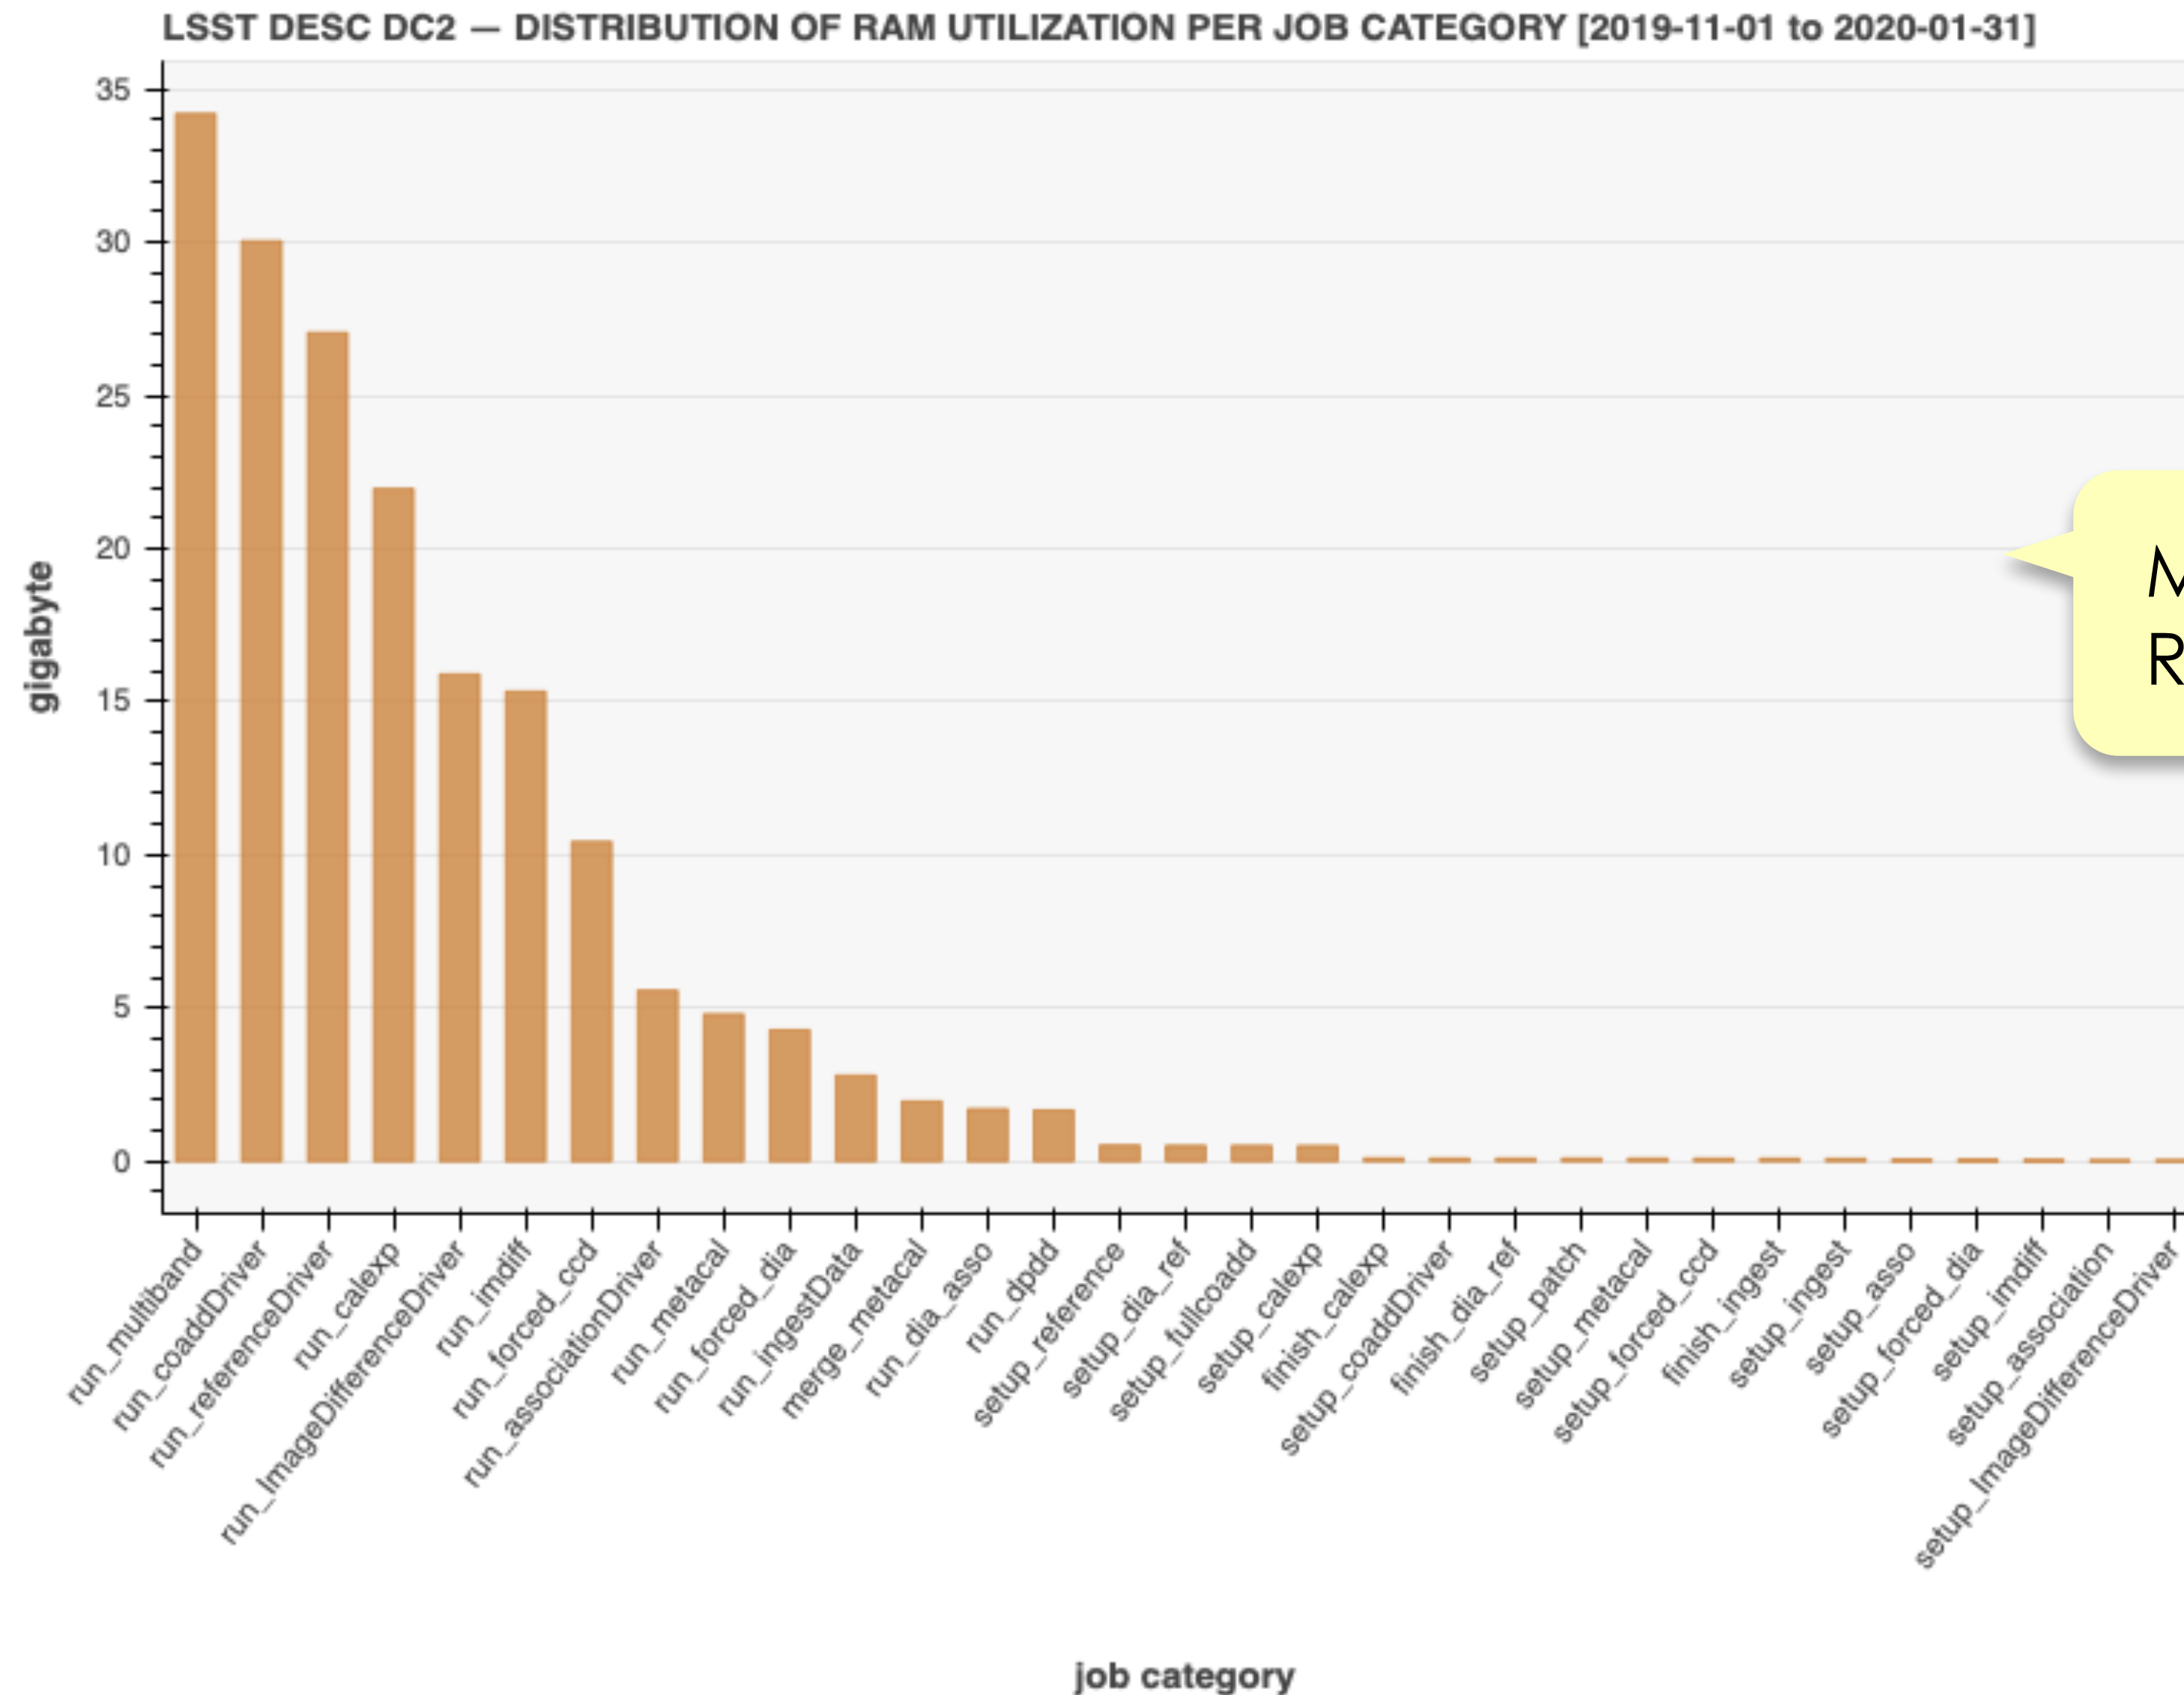

on the software itself, on what we need to run it at scale, hardware and infrastructure requirements, etc.

DATA RELEASE PROCESSING (CONT.)

CPU time consumed by LSST DESC DC2 Run2.2i image processing jobs.

DATA RELEASE PROCESSING (CONT.)

Maximum RSS used by LSST DESC DC2 Run2.2i jobs, per job category.

DATA RELEASE PROCESSING (CONT.)

CPU vs RAM used by LSST DESC DC2 Run2.2i jobs, per job category.

LSST DESC IMAGE SIMULATION

- Experimented an event-driven approach for data handling

dCache-based grid storage element at CC-IN2P3 used to collect outputs of simulation jobs

developed tool to automatically trigger file copy from dCache to /sps/lssttest as soon as new files are uploaded

leverages dCache storage events infrastructure

see [this meeting](#) for additional information

UPGRADE OF HARDWARE FOR CATALOG DB

- Imminent upgrade of hardware for catalog database (Qserv)
foundation of the catalog database for first years of data taking

role	count	RAM [GB]	disk [TB]
workers	20	256	64
masters	2	256	15
kubernetes	3	64	1

INTERNATIONAL CONNECTIVITY

PLANNED EVOLUTION

- **Usable network bandwidth** for LSST needs

CC-IN2P3 ↔ StarLight (Chicago)

now	20 Gbps
2020 Q1	40 Gbps
2021 Q1	100 Gbps

Evolution plan agreed with RENATER

Slide presented at
**LSST global
networking workshop**
Sep. 2019

INTERNATIONAL CONNECTIVITY (CONT.)

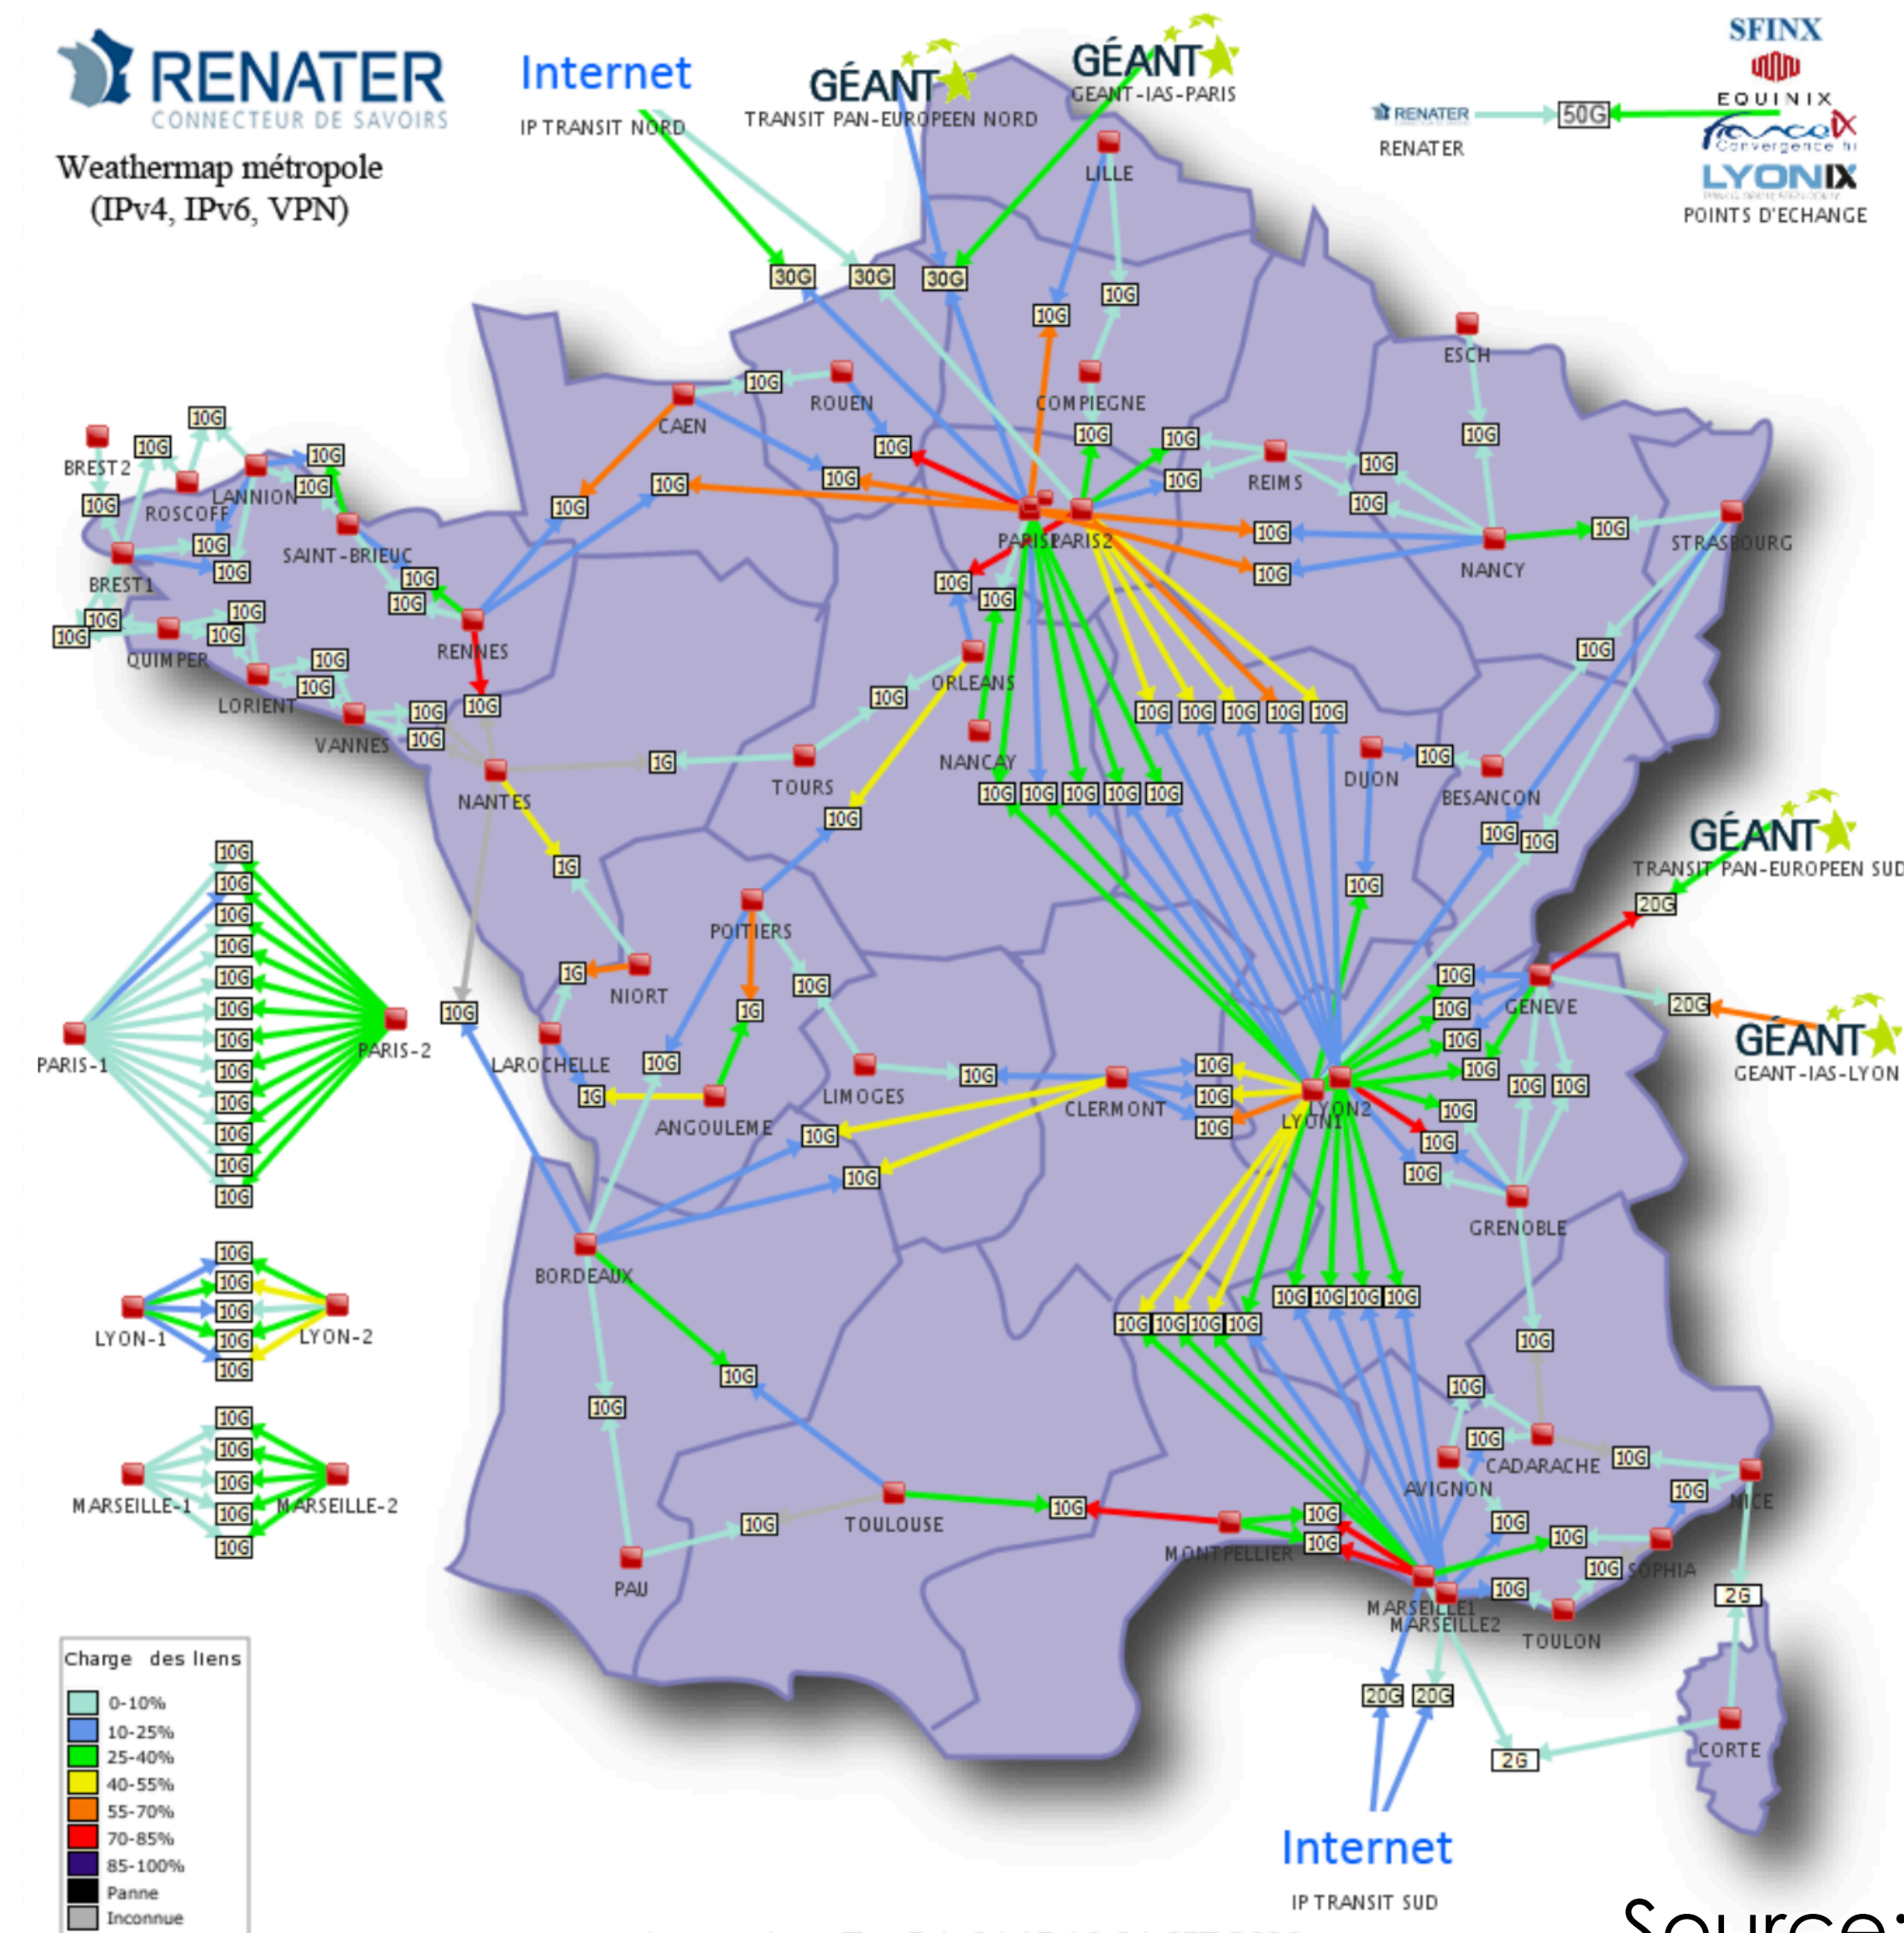

- Chronic issue with the stability and capacity of the 20 Gbps link between CC-IN2P3 and NCSA
issue in the segment connecting CC-IN2P3 to GEANT routers, within France
the persistence of this issue is a source of great concern

Measured throughput in Gbps from 2019-12-01 to 2020-01-28 between ccperfsonar1.in2p3.fr and psb-bw-100g.ncsa.illinois.edu

Source: [CC-IN2P3's perfSONAR](#)

INTERNATIONAL CONNECTIVITY (CONT.)

Source: [RENATER](#)

IMAGE STORAGE INFRASTRUCTURE TESTS

- Since 2019Q3 we have been testing an alternative infrastructure for image storage

big filer, accessible via NFS

image processing for DESC DC2 Run2.2i uses this storage area since Nov. 2019

no major technical issues found

SHARING (SMALL) DATASETS

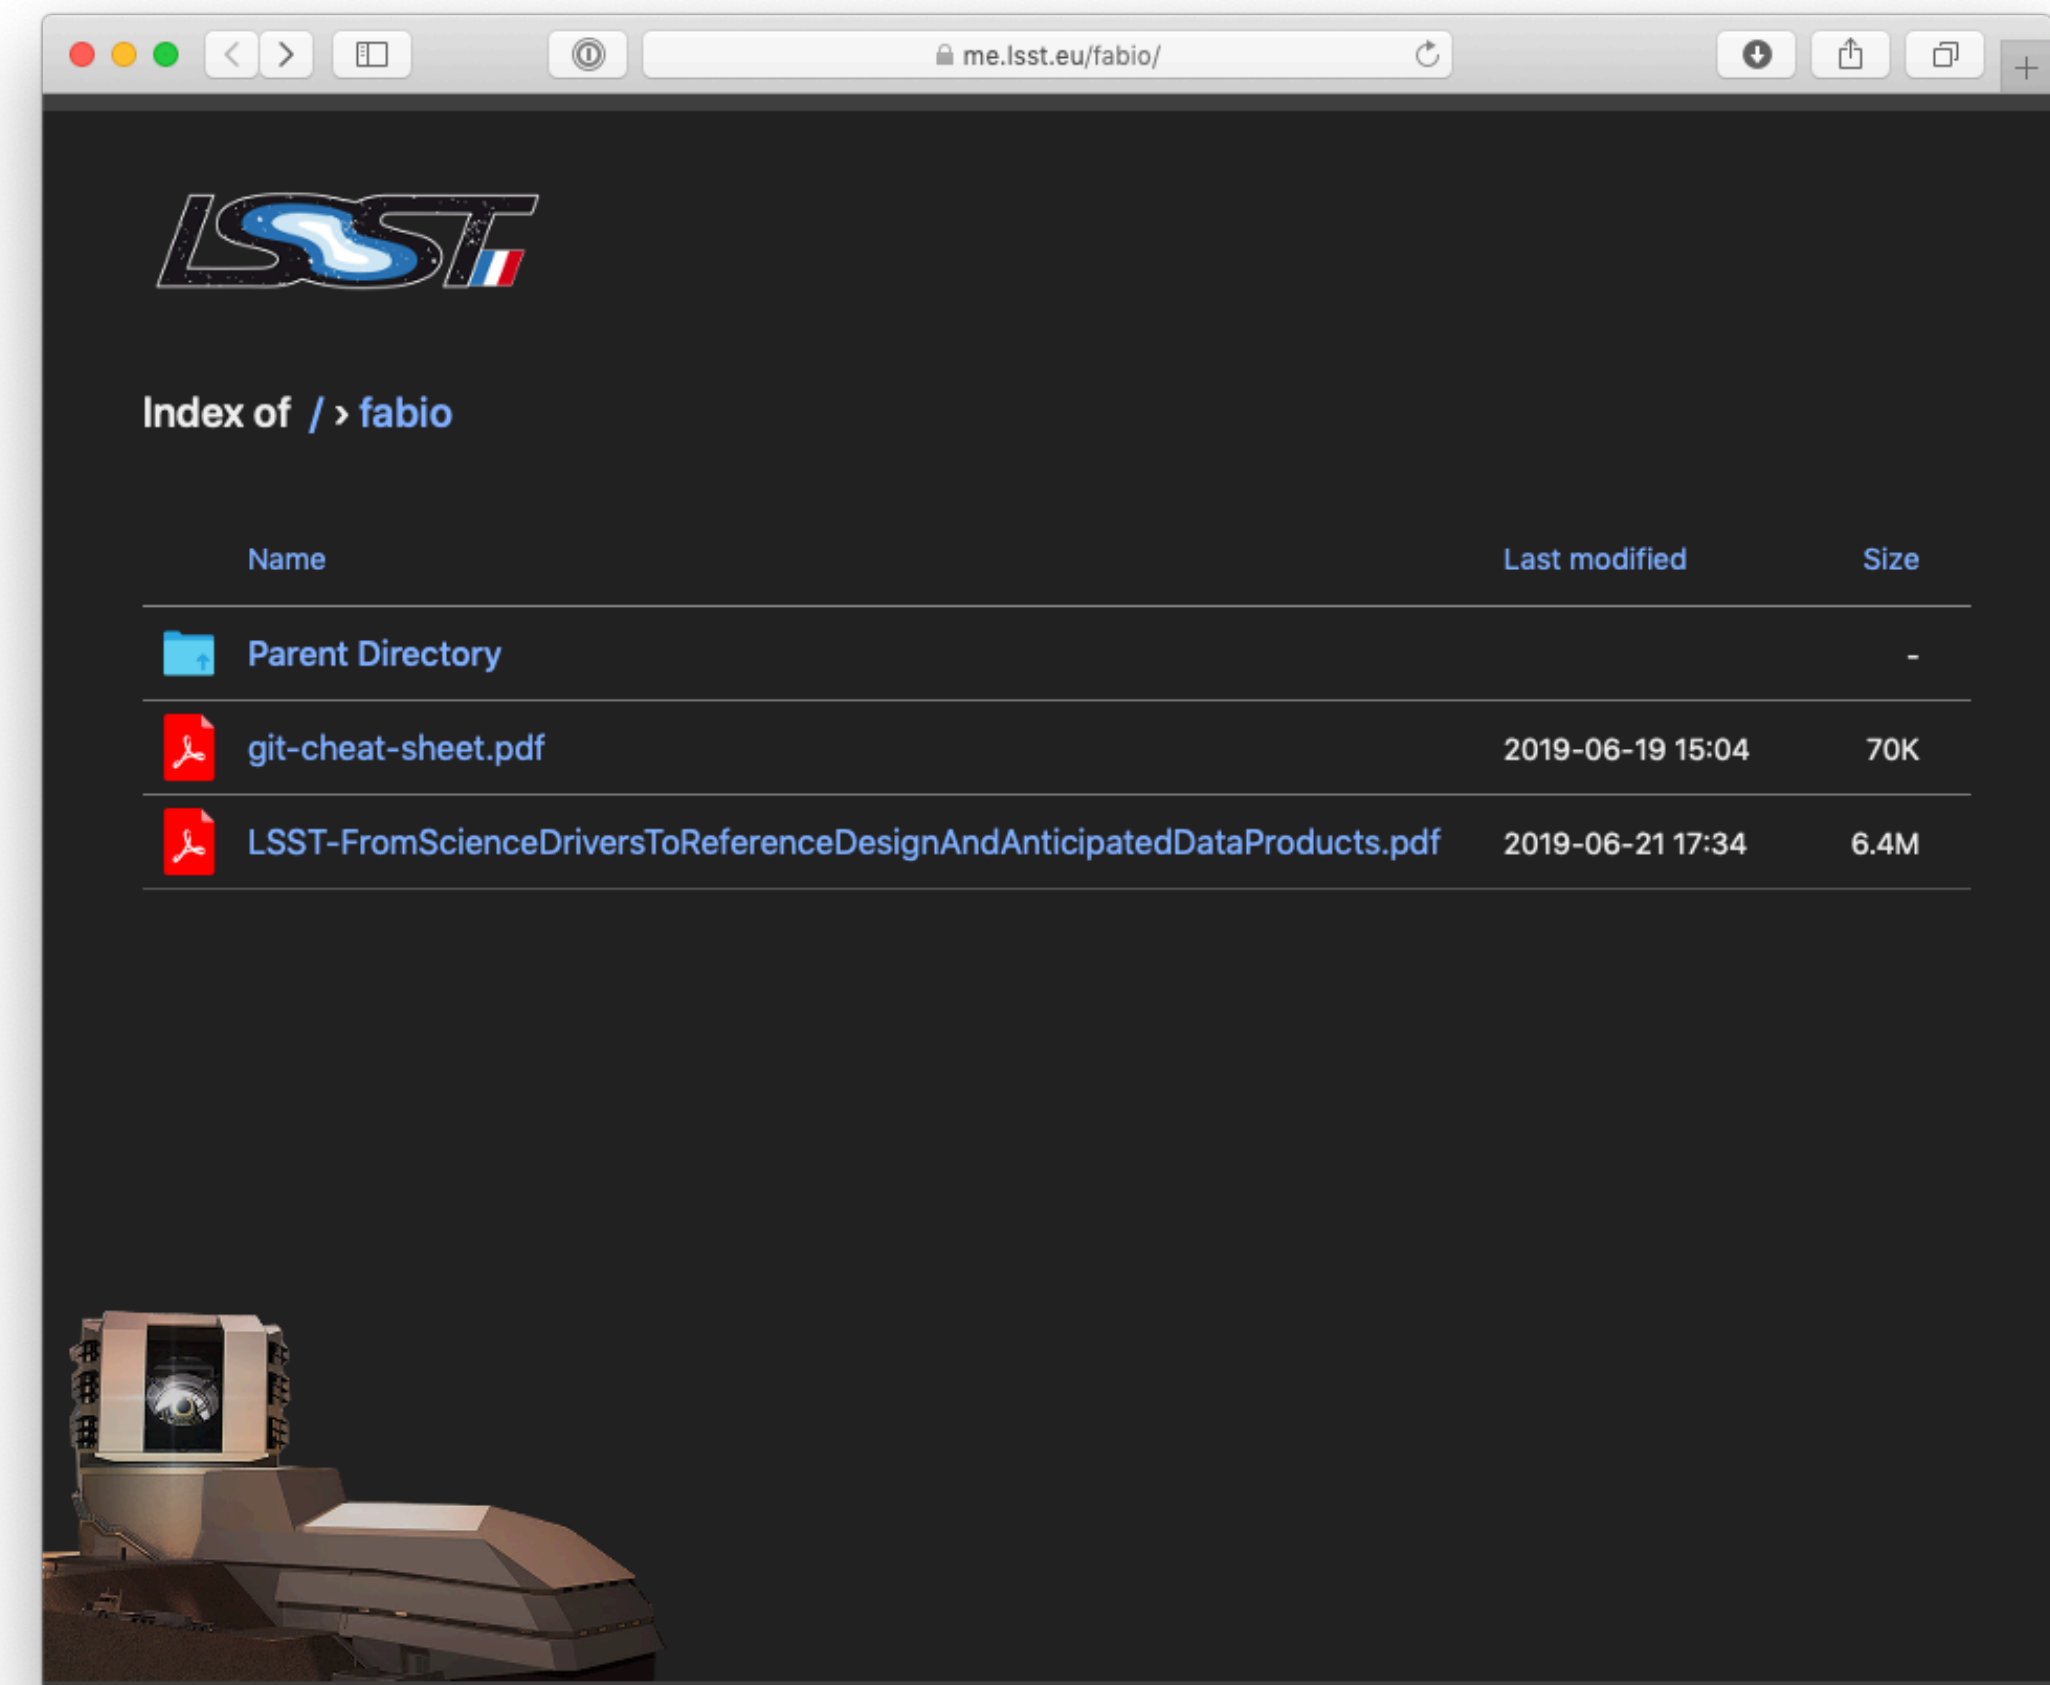

- You can easily share small datasets

*store the files you want to share
under /sps/lstt/users/**yourlogin**/web*

your files will be publicly accessible
via <https://me.lstt.eu/yourlogin>

ideal for logs, plots, notebooks, etc.

*there are constraints: make sure your
read the [documentation](#)*

JOB PROFILING

- Instrumentation of jobs for collecting and analysing coarse-grained job profiling data
see Bastien's presentation later this morning

ONGOING WORK

- Last stage of preparation of a Jupyter Hub platform
 - will make easier launching Jupyter notebooks at CC-IN2P3*
 - customisable for individual needs (e.g. what release of the stack to use, what Python interpreter to use, etc.)*
 - allows for keeping a work session alive, even if you disconnect your laptop from the network*
 - login with your individual credentials*
 - elastic backend will allow to easily grow as need arises*
 - stackyter won't be needed any longer, but will continue to work*

WHAT IS NEXT

- Improve our situation regarding international connectivity
actions already taken, but no concrete results so far
- Annual revisit of our sizing work
check assumptions compared to the just released [DMNT-135](#) “DM Sizing Model and Purchase Plan”
- Evaluate other storage platforms
*both POSIX and S3-based, **compatible with what Butler Gen3 expects***
- Improve usability of inter-site data transfer tools

QUESTIONS & COMMENTS
