LOFAR Data Injection, Distribution, and Access: Status Update

Riccardo Di Maria

CERN

March 11th, 2020 - WP2 Fortnightly Meeting, CERN

Status Update

- LOFAR data are in the DataLake (thanks Ron!).
  - 355 files (tar), 3 < size (GB) < 450.

- LOFAR workflow (WF) is being developed and tested by Yan Grange.
  - What is the status? Is it able to read data remotely, from the DataLake? Can we use already-present data to run this WF?

- The WF should be simply tested in a local environment, making sure the connection with the DataLake can be established.
  - Troubleshoot all potential issues coming from the WF.

- Eventually, generalisation by running it out-of-the-box, in a new environment.
