Status of CKM Angle Measurements, a report from BaBar and BELLE.

lundi 8 mars 2010 17:20 (15 minutes)

I will review the latest developments in determining the CP-violating phases of the CKM matrix elements from measurements by the BaBar and BELLE experiments at the high-luminosity B factories (PEP-II and KEKB). The emphasis will be on the angle gamma/phi3 of the Unitarity Triangle, which is the relative phase $\arg((-V_{ud} V_{ub})/(V_{cd} V_{cb}))$, or the CP-violating phase of the b->u transition in the commonly used Wolfenstein convention.
