

# **European Summer School : Radiation Measurements and Radiochemistry in Environment and Decommissioning**

lundi 1 juillet 2024 - vendredi 5 juillet 2024

Faculty of Physics and Engineering

## **Recueil des résumés**

# Contents

Lecture 1 : Radioactivity, friend or foe of life on earth? . . . . .	1
Lecture 2 : From polonium to nihonium –radiochemical research at the Paul Scherrer Institute . . . . .	1
Lecture 2 : From polonium to nihonium –radiochemical research at the Paul Scherrer Institute . . . . .	1
Lecture 3 : Radiation damage studies: fuels and actinides compounds . . . . .	1
Lecture 4 : Chemical decontamination of metallic waste and measurement of radionuclides . . . . .	1
Lecture 5 : Characterization methodologies and management of radioactive waste at CERN . . . . .	1
Lecture 6 : Research towards radioactive waste disposal at KIT-INE . . . . .	1
Lecture 7 : Accelerator Mass spectrometry (AMS) for radionuclide analysis . . . . .	2
Lecture 8 : Decommissioning of nuclear facilities . . . . .	2
Welcome and presentation of IPHC Laboratory . . . . .	2
Lecture 9 : Radioactive aerosol metrology, pollutant transfer and measurement . . . . .	2
Lecture 10 : Gamma-ray spectrometry for environmental radioactivity analysis . . . . .	2
lecture 11 : Radiological emergency: how the radiological situation is determined, with a focus on aeroradiometric measurements in Switzerland. . . . .	2
Lecture 12 : Dismantling of Strasbourg research nuclear reactor . . . . .	2
Lecture 14 : Report of the United Nations Scientific Committee on the Effects of Atomic Radiation . . . . .	2
Lecture 13 : Radionuclide speciation and transfers in the environment: recent research in radiochemistry and new perspectives from multidisciplinary approaches. . . . .	3
Visit: Synchrotron based X-ray spectroscopic characterization of radionuclides . . . . .	3

## **Lecture 1 : Radioactivity, friend or foe of life on earth?**

Radioactivity, friend or foe of life on earth?

Lunch / 2

## **Lecture 2 : From polonium to nihonium –radiochemical research at the Paul Scherrer Institute**

3

## **Lecture 2 : From polonium to nihonium –radiochemical research at the Paul Scherrer Institute**

Auteur correspondant [patrick.steinegger@psi.ch](mailto:patrick.steinegger@psi.ch)

4

## **Lecture 3 : Radiation damage studies: fuels and actinides compounds**

5

## **Lecture 4 : Chemical decontamination of metallic waste and measurement of radionuclides**

6

## **Lecture 5 : Characterization methodologies and management of radioactive waste at CERN**

7

## **Lecture 6 : Research towards radioactive waste disposal at KIT-INE**

8

**Lecture 7 : Accelerator Mass spectrometry (AMS) for radionuclide analysis**

9

**Lecture 8 : Decommissioning of nuclear facilities**

10

**Welcome and presentation of IPHC Laboratory**

11

**Lecture 9 : Radioactive aerosol metrology, pollutant transfer and measurement**

12

**Lecture 10 : Gamma-ray spectrometry for environmental radioactivity analysis**

13

**lecture 11 : Radiological emergency: how the radiological situation is determined, with a focus on aeroradiometric measurements in Switzerland.**

14

**Lecture 12 : Dismantling of Strasbourg research nuclear reactor**

15

## **Lecture 14 : Report of the United Nations Scientific Committee on the Effects of Atomic Radiation**

16

**Lecture 13 : Radionuclide speciation and transfers in the environment: recent research in radiochemistry and new perspectives from multidisciplinary approaches.**

17

**Visit: Synchrotron based X-ray spectroscopic characterization of radionuclides**

**Auteur:** J ROTHE<sup>1</sup>
