Standard Model probability

Search for New Physics

Quantic way

Skewed probability

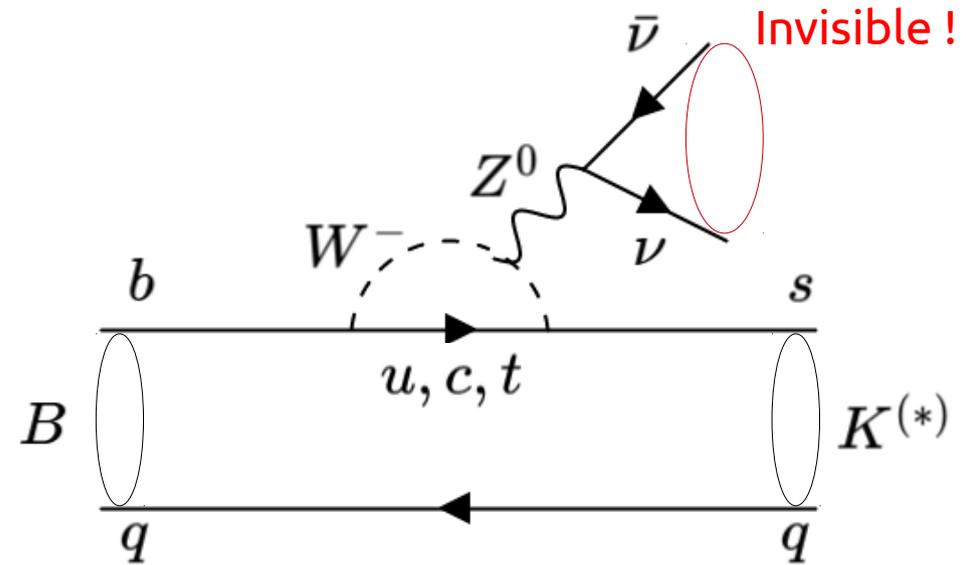

Needs **high precision** : **Belle II experiment**

New Physics in $B \rightarrow K^{(*)} \nu \bar{\nu}$

$B \rightarrow K^{(*)} \nu \bar{\nu}$ decay :

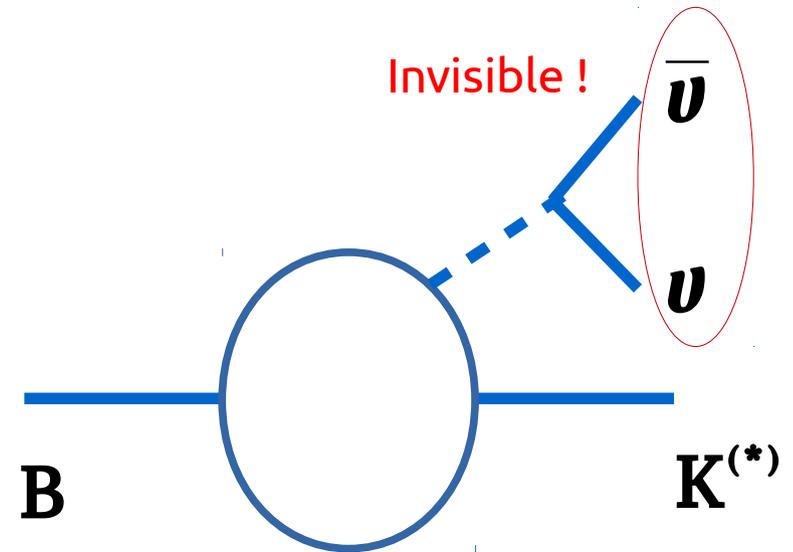

- ▶ Never discovered
- ▶ Partially invisible final state
- ▶ Probability : $\mathcal{B}(B \rightarrow K^{(*)} \nu \bar{\nu}) \sim 10^{-6}$

New Physics in $B \rightarrow K^{(*)} \nu \bar{\nu}$

$B \rightarrow K^{(*)} \nu \bar{\nu}$ decay :

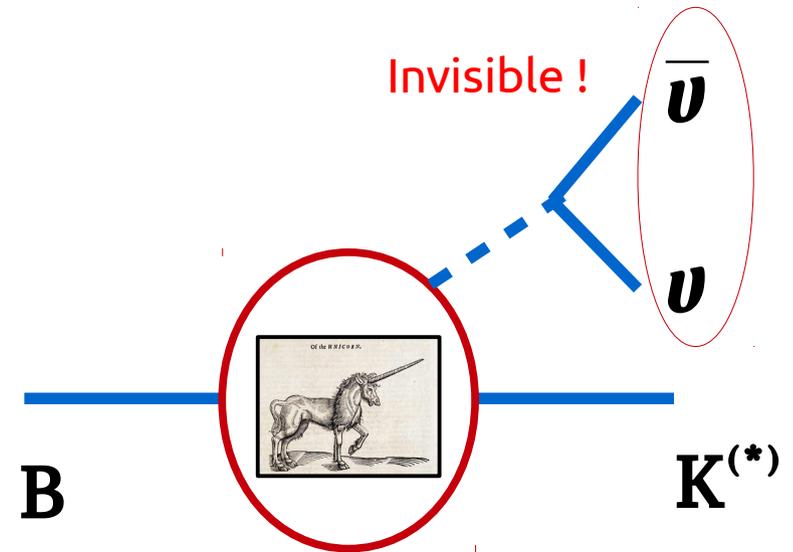

- ▶ Never discovered
- ▶ Partially invisible final state
- ▶ Probability : $\mathcal{B}(B \rightarrow K^{(*)} \nu \bar{\nu}) \sim 10^{-6}$

New Physics in $B \rightarrow K^{(*)} \nu \bar{\nu}$

$B \rightarrow K^{(*)} \nu \bar{\nu}$ decay :

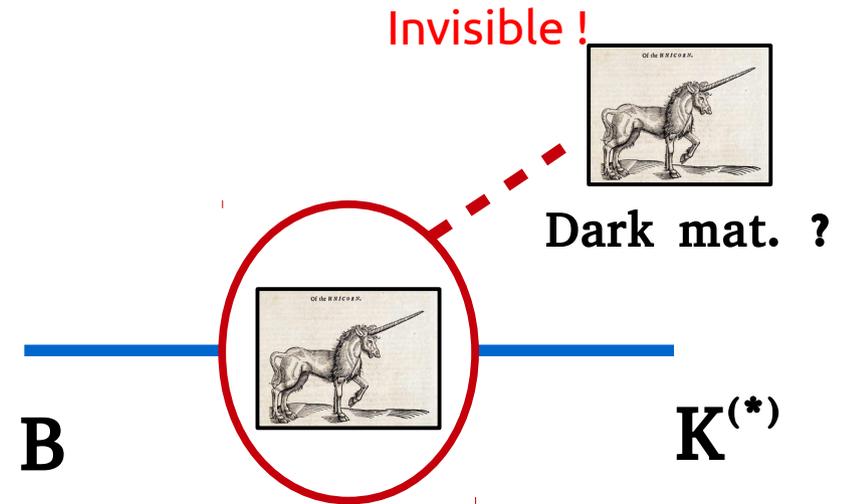

- ▶ Never discovered
- ▶ Partially invisible final state
- ▶ Probability : $\mathcal{B}(B \rightarrow K^{(*)} \nu \bar{\nu}) \sim 10^{-6}$

New Physics in $B \rightarrow K^{(*)} \nu \bar{\nu}$

$B \rightarrow K^{(*)} \nu \bar{\nu}$ decay :

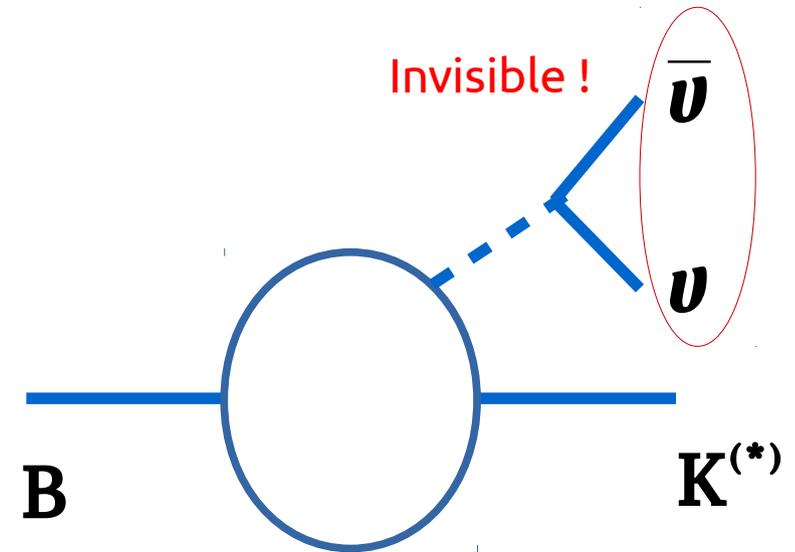

- ▶ Never discovered
- ▶ Partially invisible final state
- ▶ Probability : $\mathcal{B}(B \rightarrow K^{(*)} \nu \bar{\nu}) \sim 10^{-6}$

New Physics in $B \rightarrow K^{(*)} \nu \bar{\nu}$

$B \rightarrow K^{(*)} \nu \bar{\nu}$ decay :

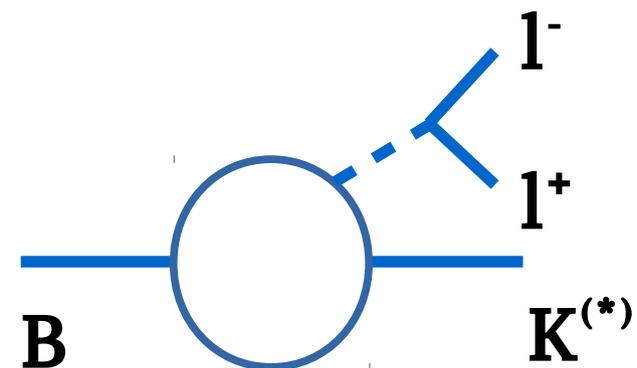

- ▶ Never discovered
- ▶ Partially invisible final state
- ▶ Probability : $\mathcal{B}(B \rightarrow K^{(*)} \nu \bar{\nu}) \sim 10^{-6}$

Similar to $B \rightarrow K^{(*)} l^+ l^-$:

- ▶ Discrepancies already observed
[F.Archilli et al. Nature, 2017]

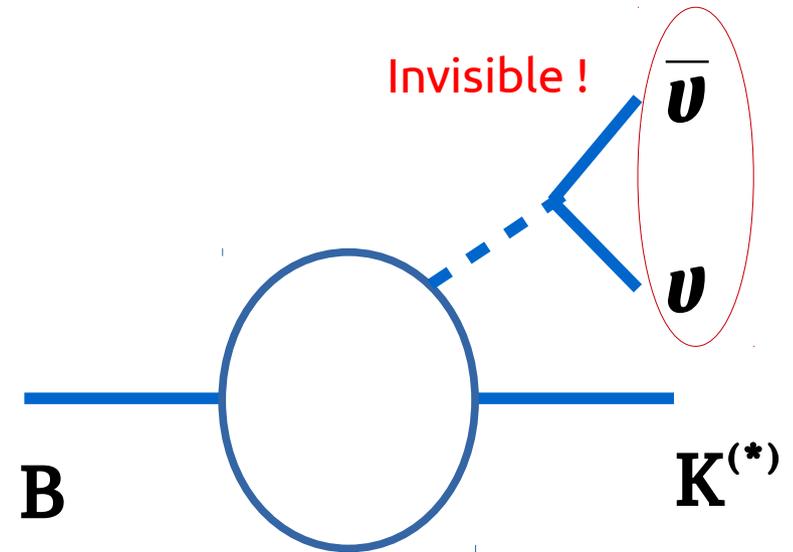

→ inconclusive

New Physics in $B \rightarrow K^{(*)} \nu \bar{\nu}$

$B \rightarrow K^{(*)} \nu \bar{\nu}$ decay :

- ▶ Never discovered
- ▶ Partially invisible final state
- ▶ Probability : $\mathcal{B}(B \rightarrow K^{(*)} \nu \bar{\nu}) \sim 10^{-6}$

Only in **Belle II** !

Search for $B \rightarrow K^{(*)} \nu \bar{\nu}$ decays In the Belle II experiment

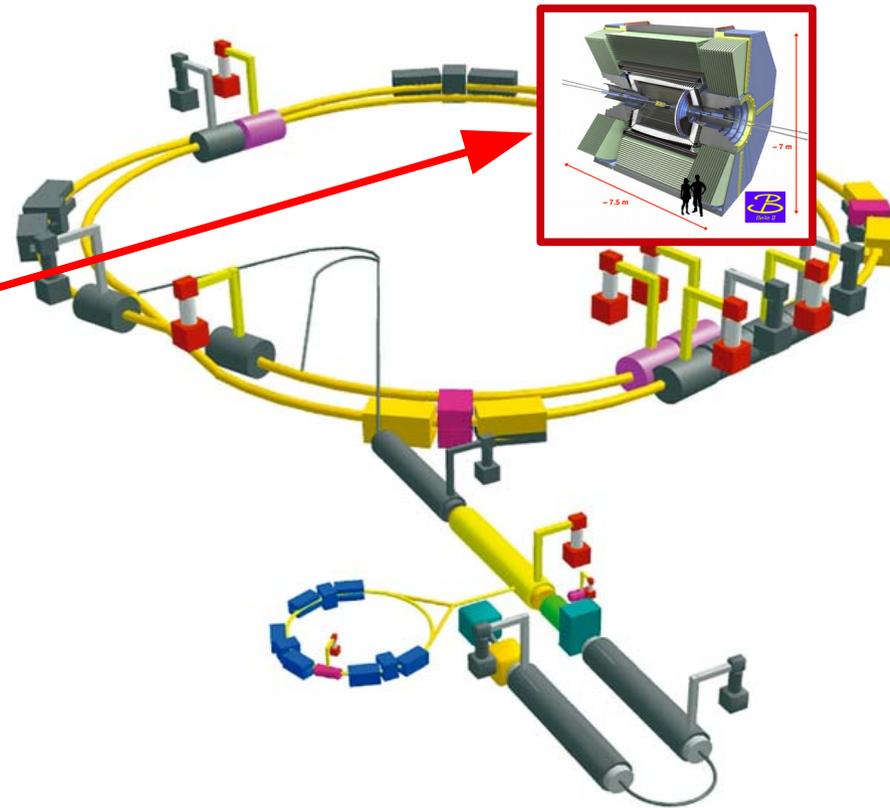

1. State of the art
- 2. The Belle II experiment**
3. Analysis
4. Results

The Belle II experiment

- ◆ International collaboration – 2019
- ◆ e^+e^- collider 7 GeV vs 4 GeV
- ◆ Instantaneous **Luminosity** highest in the world
($8 \times 10^{35} \text{ cm}^{-2}\text{s}^{-1}$)
→ **Statistics = Precision**

The Belle II detector :

- ◆ Improvements since Belle detector (1998 -2010)

The Belle II experiment

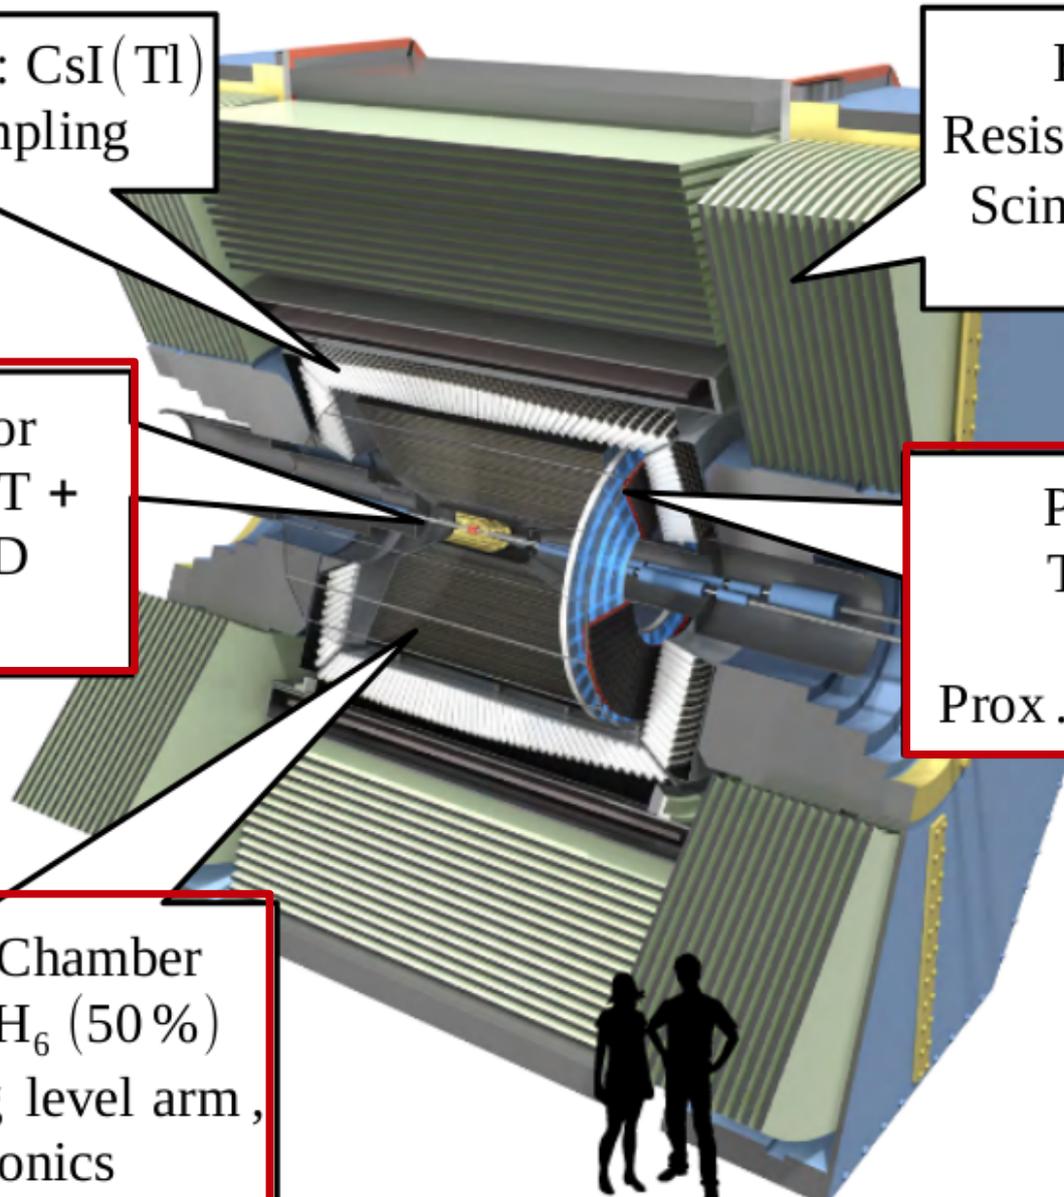

EM Calorimeter : CsI(Tl)
waveform sampling

K_L and muon detector
Resistive Plate Counter (barrel)
Scintillator + WLSF + MPPC
(endcaps)

Vertex Detector
2 layers DEPFET +
4 layers DSSD
(phase 3)

Particle Identification
Time-Of-Propagation
counter (barrel)
Prox. focusing Aerogel RICH

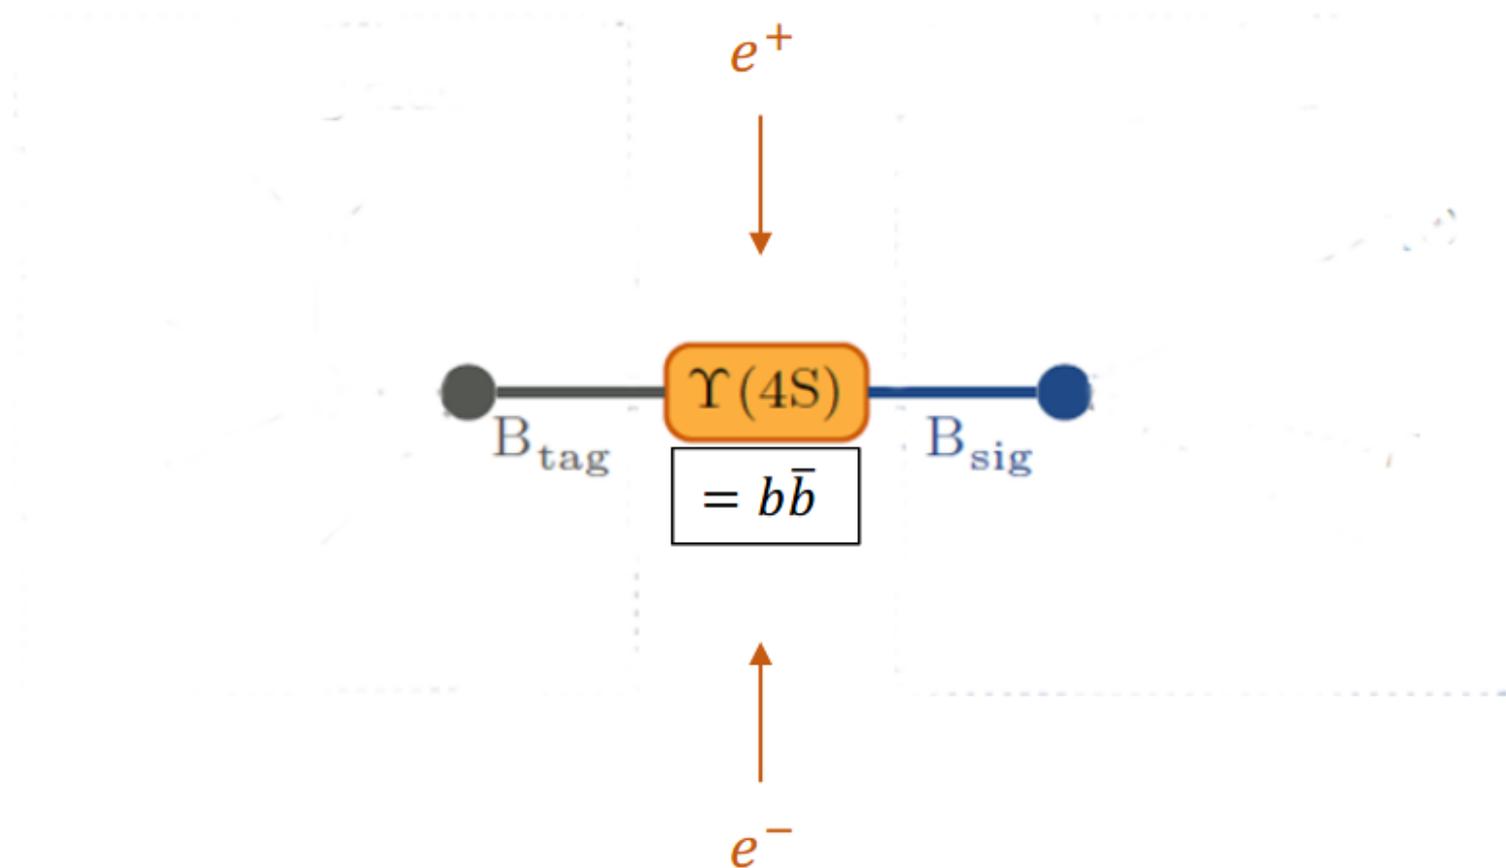

Central Drift Chamber
He (50%):C₂H₆ (50%)
small cells, long level arm,
fast electronics

Collisions in Belle II

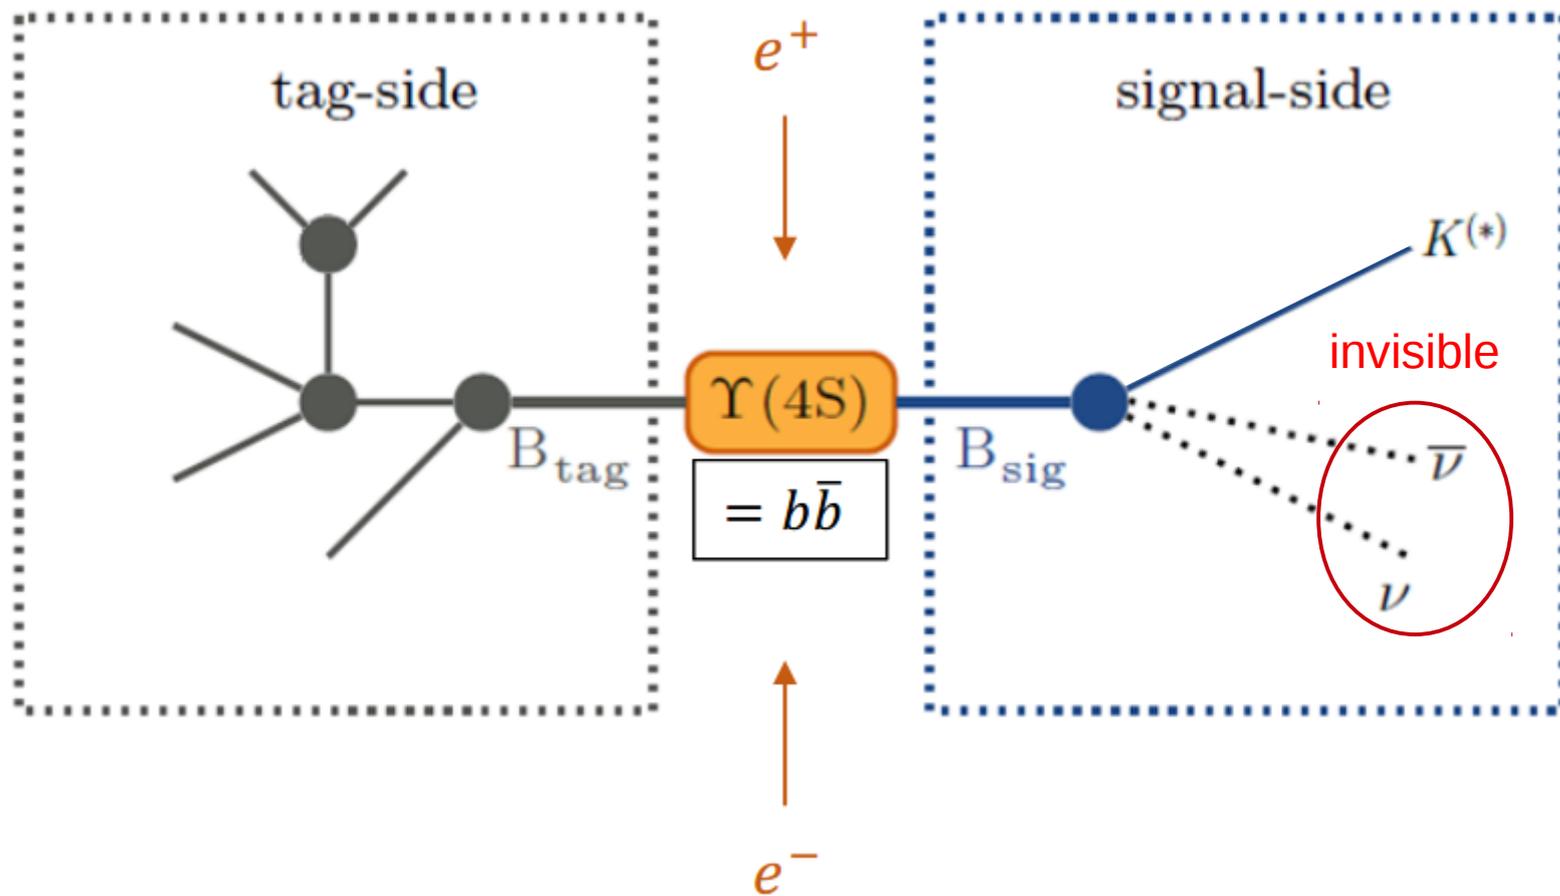

$e^+ e^-$ collisions

→ Production of a B meson **pair**

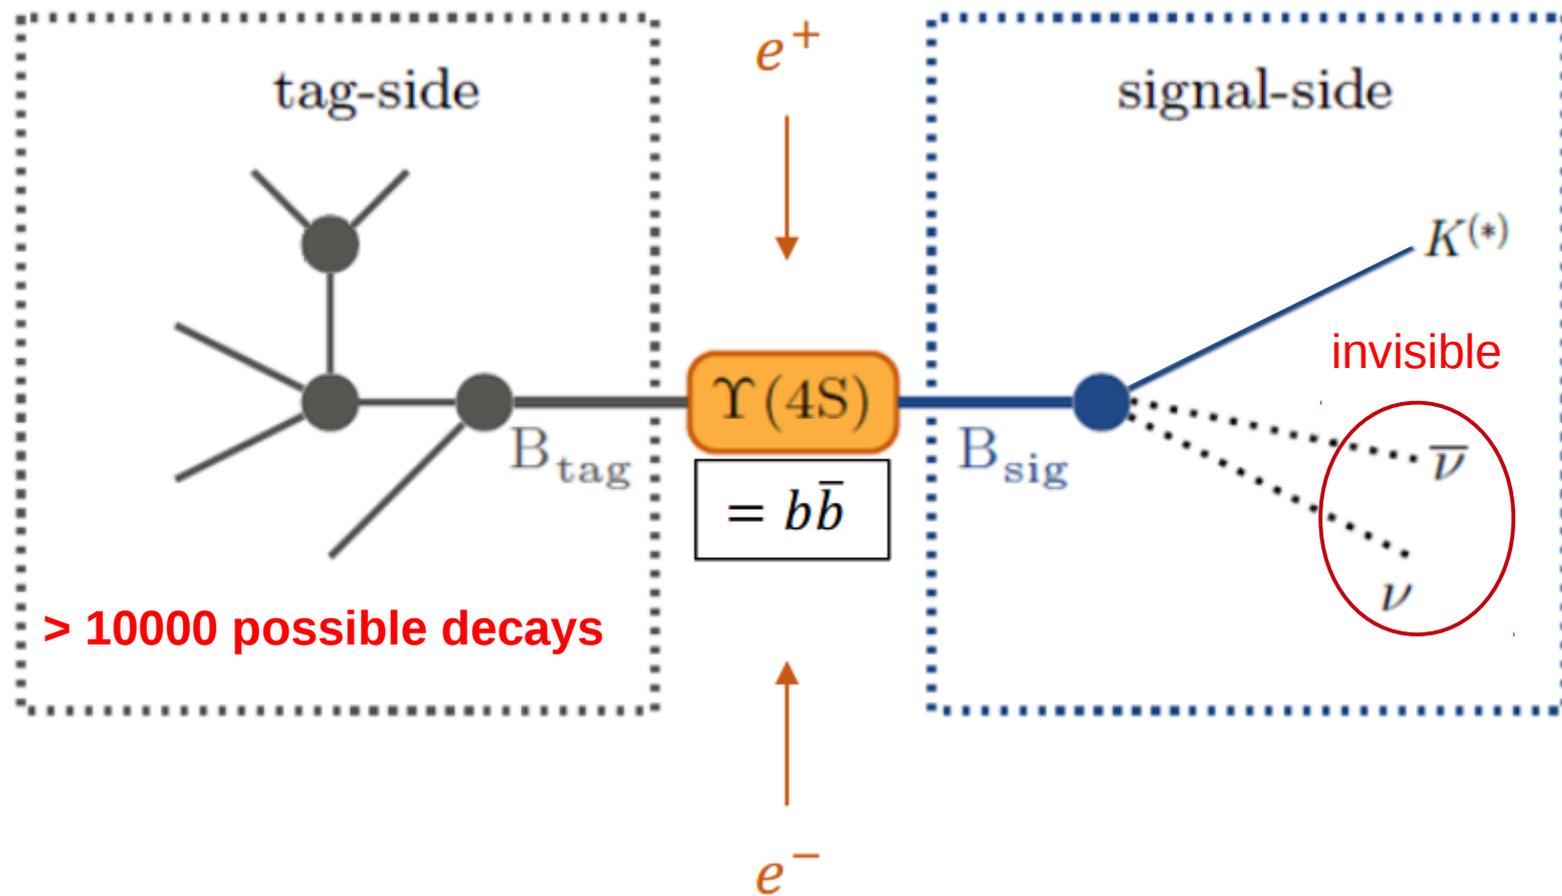

Collisions in Belle II

- $e^+ e^-$ collisions
- Production of a B meson **pair**
- Mesons decay (only one in our channel)

Collisions in Belle II

- $e^+ e^-$ collisions
- Production of a B meson **pair**
- Mesons decay (only one in our channel)

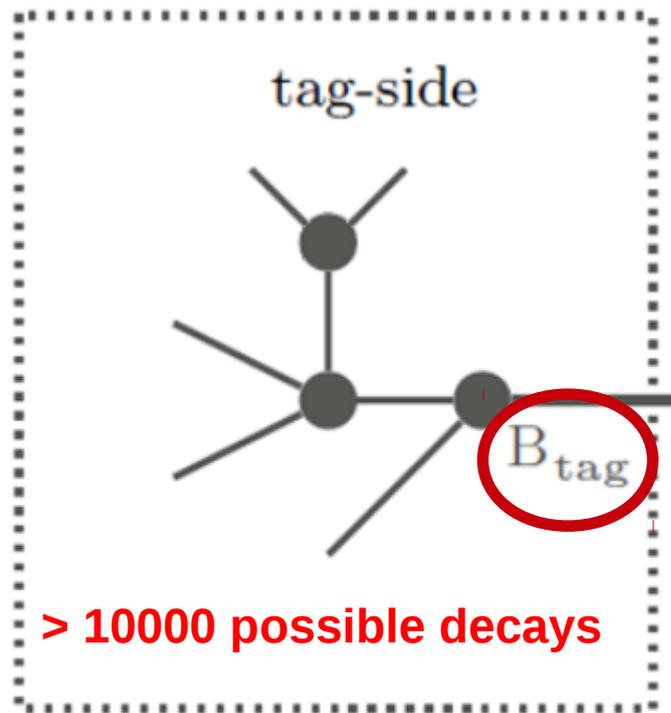

Collisions in Belle II

$e^+ e^-$ collisions

→ Production of a B meson **pair**

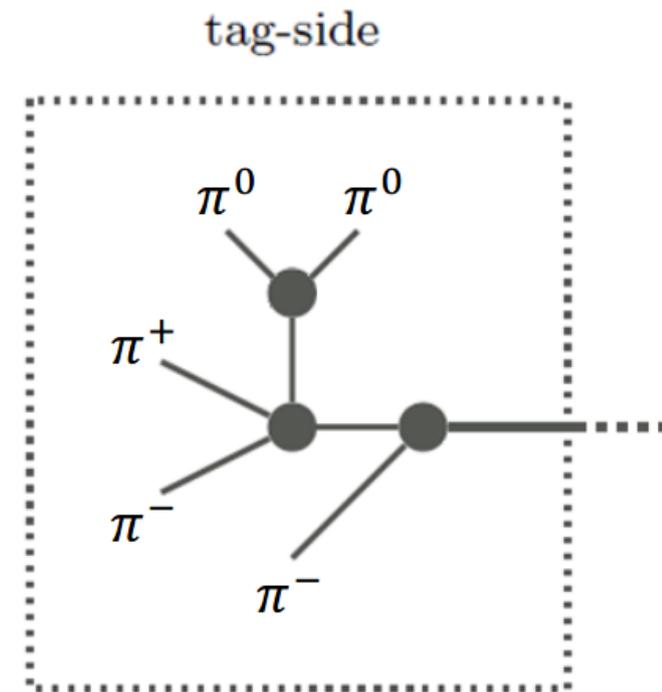

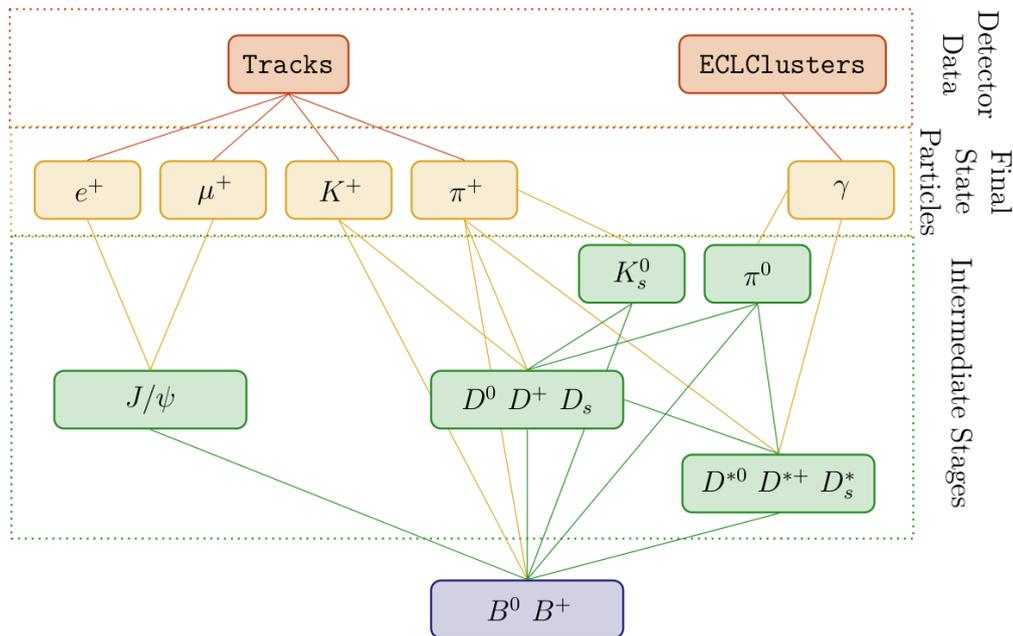

→ Mesons decay (only one in our channel)

Importance of the
B_{tag} reconstruction

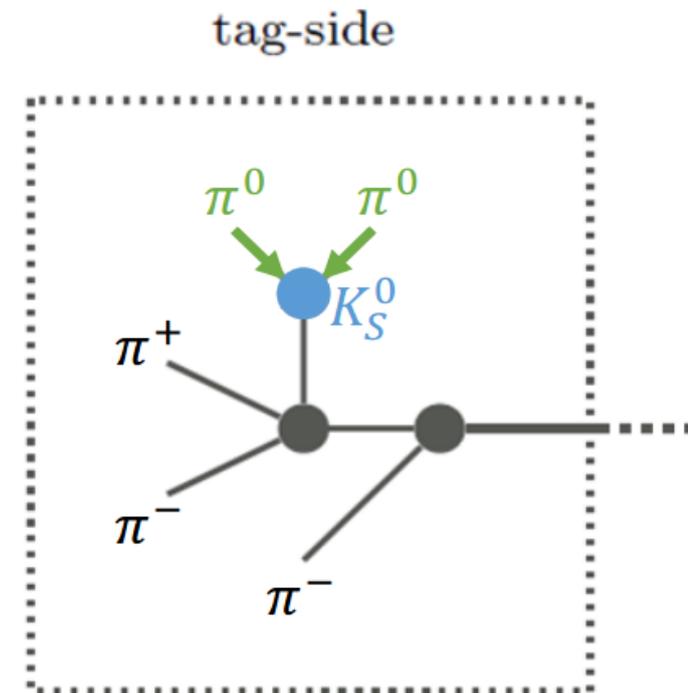

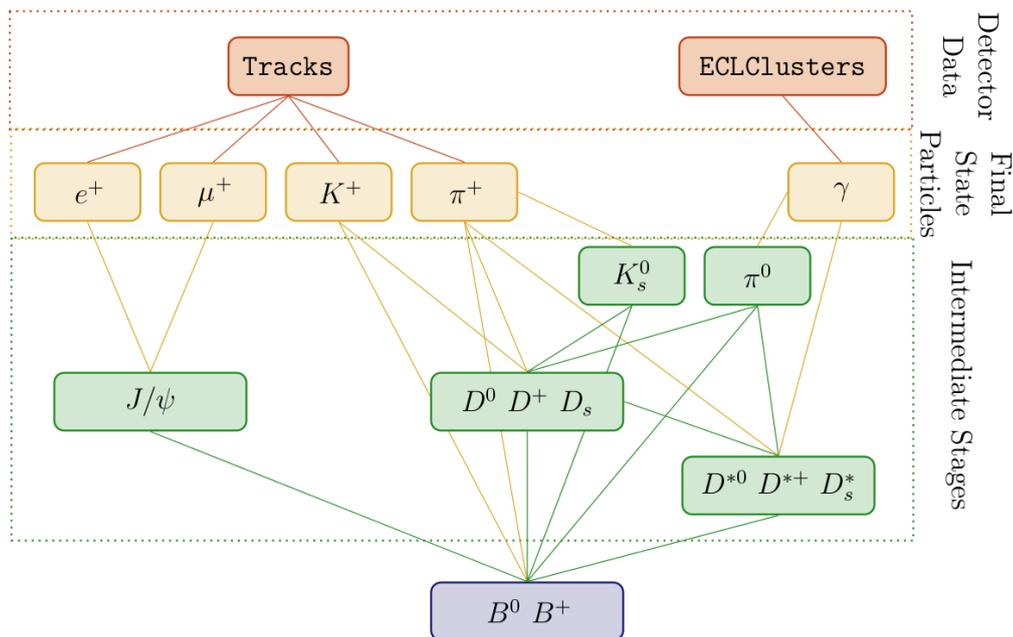

Full Event Interpretation (FEI) algorithm

- ◆ How to observe invisible signal ?
 - Btag reconstruction
 - Full Event Interpretation (FEI) : tag side reconstruction algorithm (*machine learning*)
- [T.Keck et al.Computer Software Big Science 2019]

[T.Keck et al. Computer Software Big Science 2019]

$$N = \text{Constant} \times \epsilon$$

N = number of signal events

ϵ = efficiency

Search for $B \rightarrow K^{(*)} \nu \bar{\nu}$ decays In the Belle II experiment

1. State of the art
2. The Belle II experiment
- 3. Analysis**
4. Results

Internship goal

$$N = L \times \sigma \times \epsilon \times \mathcal{B}(B \rightarrow K^{(*)} \nu \bar{\nu})$$

- ♦ Search for $B \rightarrow K^{(*)} \nu \bar{\nu}$ in Belle until 2010 → statistics too low
[O.Lutz et Al. *Physical Review D* 2013]
- ♦ Simulation in Belle II in 2019 in Strasbourg → ϵ too low
- ♦ Since 2019 : corrections and enhancements to the simulation

Internship goal

$$N = L \times \sigma \times \epsilon \times \mathcal{B}(B \rightarrow K^{(*)} \nu \bar{\nu})$$

- ♦ Search for $B \rightarrow K^{(*)} \nu \bar{\nu}$ in Belle until 2010 → statistics too low
[O.Lutz et Al. *Physical Review D* 2013]
- ♦ Simulation in Belle II in 2019 in Strasbourg → ϵ too low
- ♦ Since 2019 : corrections and enhancements to the simulation

My work :

Quantify these enhancements and find new ways to improve ϵ

Internship goal

$$N = L \times \sigma \times \epsilon \times \mathcal{B}(B \rightarrow K^{(*)} \nu \bar{\nu})$$

- ♦ Search for $B \rightarrow K^{(*)} \nu \bar{\nu}$ in Belle until 2010 → statistics too low
[O.Lutz et Al. Physical Review D 2013]
- ♦ Simulation in Belle II in 2019 in Strasbourg → ϵ too low
- ♦ Since 2019 : corrections and enhancements to the simulation

My work :

Quantify these enhancements and find new ways to improve ϵ

$\epsilon \approx \epsilon_{\text{signal}} \times \epsilon_{\text{tag}} \longrightarrow$ We want to maximize ϵ_{tag}
to optimize the FEI **Learning**

How to measure ϵ_{tag} ?

Use of $B^0 \rightarrow \nu\bar{\nu}$ as a tool :

Invisible final state $\rightarrow \epsilon = \epsilon_{\text{tag}}$

How to measure ϵ_{tag} ?

Use of $B^0 \rightarrow \nu\bar{\nu}$ as a tool :

Invisible final state $\rightarrow \epsilon = \epsilon_{\text{tag}}$

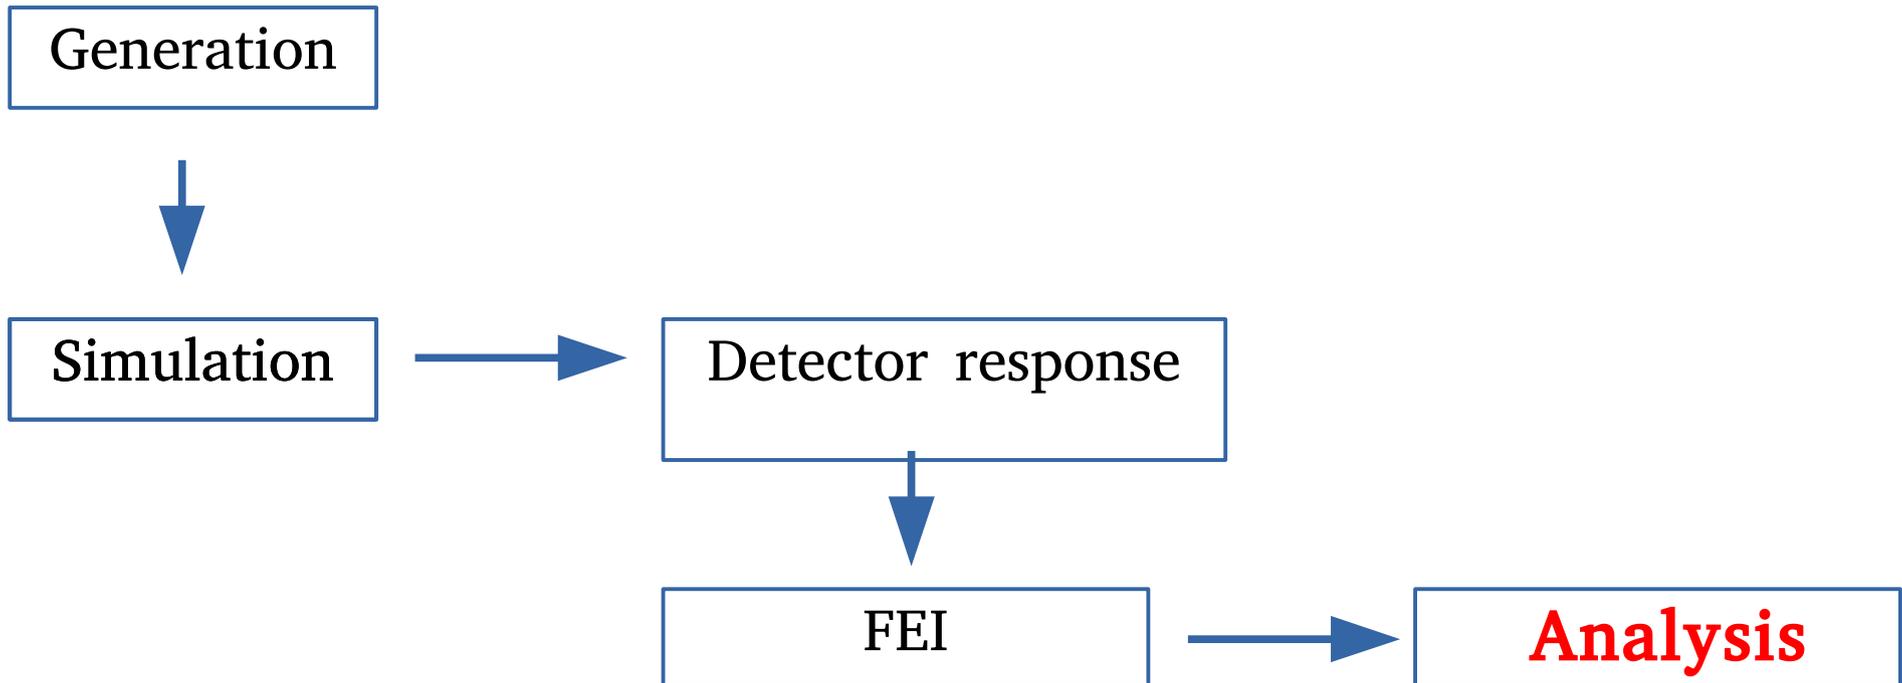

We simulate B meson pairs with one B decaying in $B^0 \rightarrow \nu\bar{\nu}$ (signal) and the other decaying generically (tag)

◆ Study done on Monte Carlo **simulations**

◆ Comparison between 3 simulations :

Belle II \rightarrow 'B2_2020', 'B2_2019'
Belle \rightarrow 'Belle'

Analysis

Search for $B \rightarrow K^{(*)} \nu \bar{\nu}$ decays In the Belle II experiment

1. State of the art
2. The Belle II experiment
3. Analysis
- 4. Results**

Measured performances

	Belle	B2_2019	B2_2020
% of reconstructed Btag decay chains	$4,0 \pm 0,2 \%$	$4,3 \pm 0,3 \%$	$10,0 \pm 0,4 \%$
Efficiency on FEI known chains	$(1,87 \pm 0,01)10^{-2}$	$(0,71 \pm 0,01)10^{-2}$	$(2,43 \pm 0,02)10^{-2}$
ϵ_{tag}	$(0,54 \pm 0,01)10^{-3}$	$(0,52 \pm 0,01)10^{-3}$	$(1,78 \pm 0,01)10^{-3}$

Measured performances

	Belle	B2_2019	B2_2020
% of reconstructed Btag decay chains	$4,0 \pm 0,2 \%$	$4,3 \pm 0,3 \%$	$10,0 \pm 0,4 \%$  X 2,5
Efficiency on FEI known chains	$(1,87 \pm 0,01)10^{-2}$	$(0,71 \pm 0,01)10^{-2}$	$(2,43 \pm 0,02)10^{-2}$  X 3
ϵ_{tag}	$(0,54 \pm 0,01)10^{-3}$	$(0,52 \pm 0,01)10^{-3}$	$(1,78 \pm 0,01)10^{-3}$

Measured performances

Algorithm upgrade

	Belle	B2_2019	B2_2020
% of reconstructed Btag decay chains	☹️	☹️	😊 X 2,5
Efficiency on FEI known chains	😊	☹️	😊 X 3
ϵ_{tag}	☹️	☹️	😊

New detector

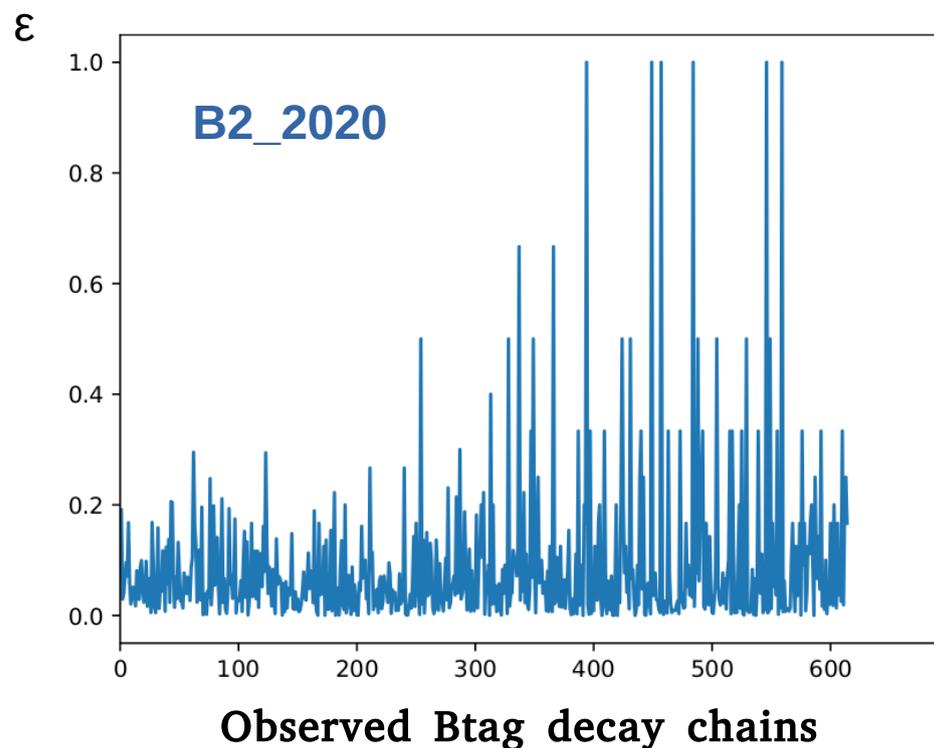

Measured performances

	Belle	B2_2019	B2_2020
% of reconstructed Btag decay chains	☹️	☹️	😊 X 2,5
Efficiency on FEI known chains	😊	☹️	😊 X 3
ϵ_{tag}	☹️	☹️	😊

◆ High impact from 2019 upgrades

◆ Still needs $\epsilon_{\text{tag}} \sim \mathbf{x3}$ to discover $B \rightarrow K^{(*)} \nu \bar{\nu}$ within **3 years**

Efficiency by Btag decay chain

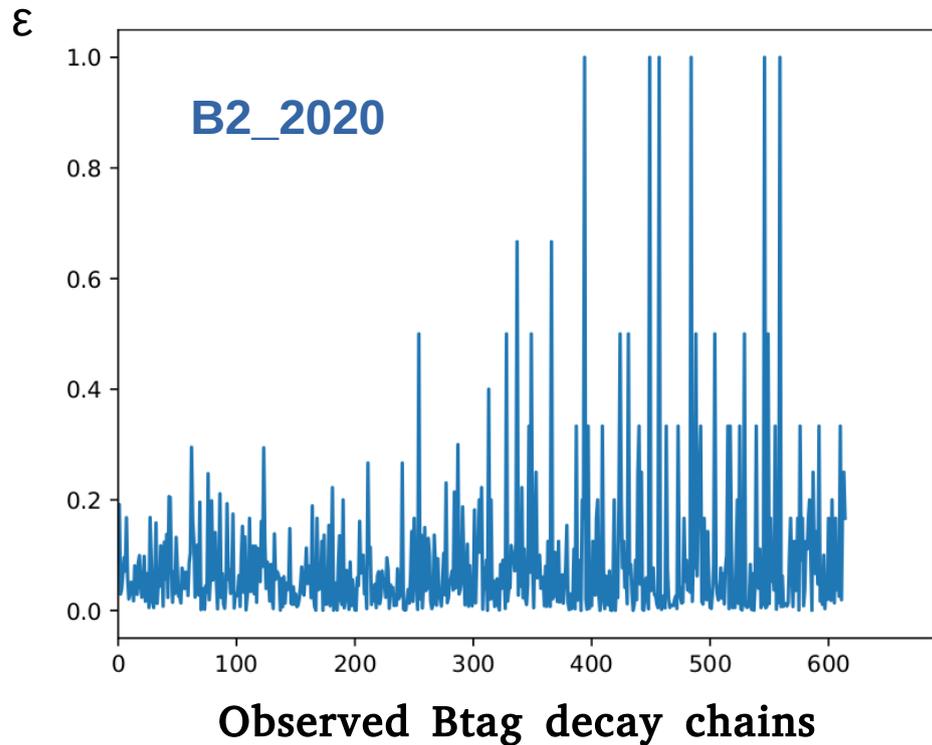

- ◆ Study done for the first time in the collaboration
- ◆ Efficiency different for each chain

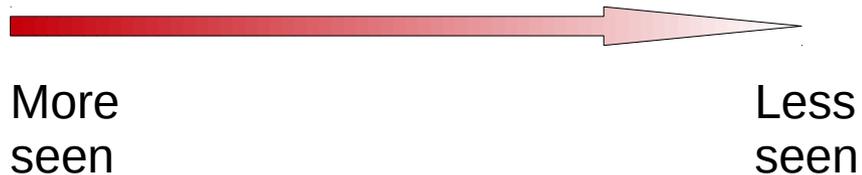

More
seen

Less
seen

Efficiency by Btag decay chain

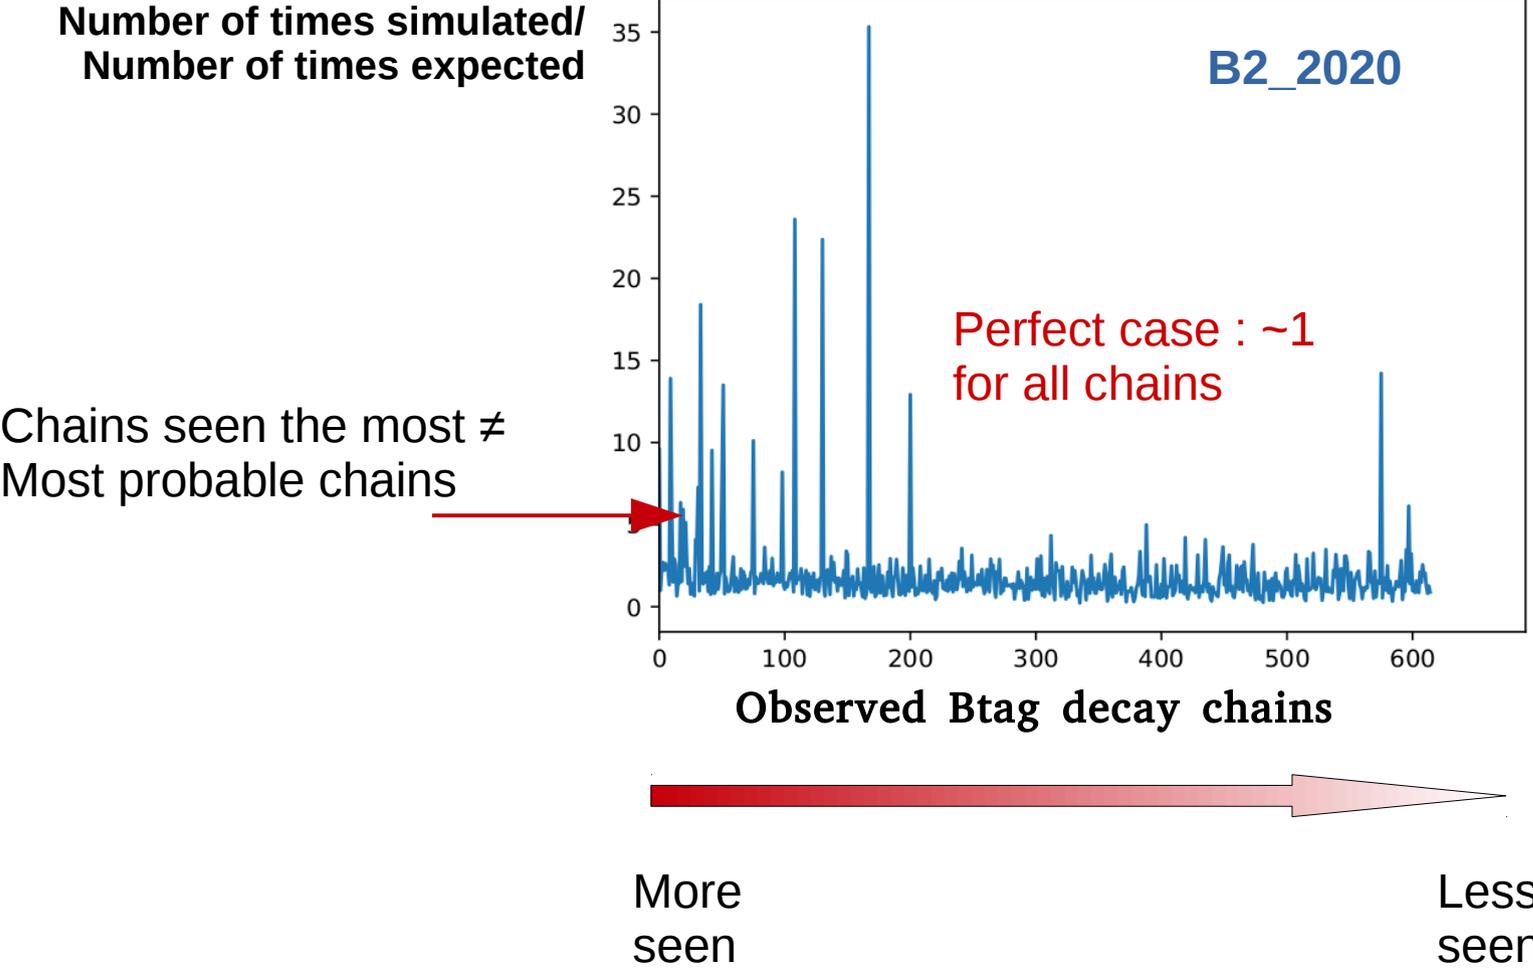

- ◆ Study done for the first time in the collaboration
- ◆ Efficiency different for each chain

Interesting to understand and optimize the reconstruction

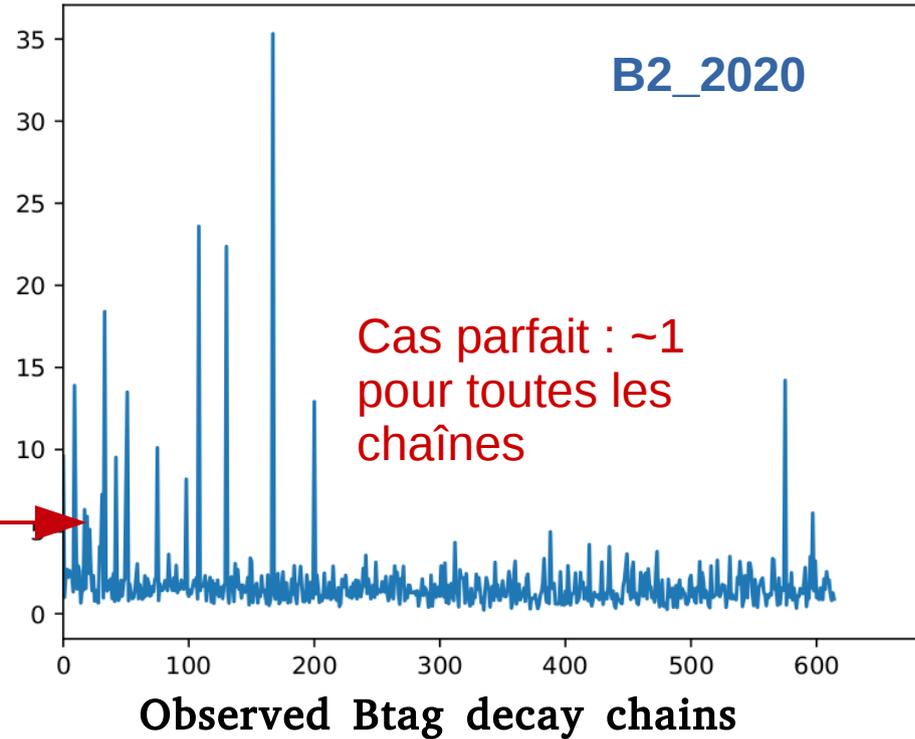

Decay chains simulation discrepancies

Decay chains simulation discrepancies

Number of times simulated/
Number of times expected

Chains seen the most \neq
Most probable chains

More
seen

Less
seen

- ◆ Some chains over represented in the simulation
- ◆ Presented to the collaboration → is going to be corrected

Summary

From my results :

- ◆ Assessment of upgrades → **measurement** of ε _{for} B2_2020
- ◆ Search for ways of optimization → First **study** by chains
- ◆ Upgrade → **discovery** of the simulation bias

To do next :

- ◆ Convolute these results to the signal reconstruction of $B \rightarrow K^{(*)} \nu \bar{\nu}$
- ◆ Implement new ways to improve efficiency

Thank you for your attention !
