

90% CL upper limits on τ LFV decays

Channel	Who	Tag side	Comments
$\tau \rightarrow \ell V^0$	Guney: ϕ Laura: ρ Timothy: ϕ Tsuzuki(Nagoya)	1 prong 1 prong 3 prong	To be extended to K^*
$\tau \rightarrow \ell \ell \ell$	Robin: 3μ A. Martini (DESY) : 3μ	3 prong 1 prong	To be extended to $e\mu\mu$ and $e\mu\mu$ (also 1 prong)
$\tau \rightarrow \ell P$	Klemens: K_s	1 prong	To be extended to $K_s K_s$
$\tau \rightarrow \ell hh$	Navid, Ami (DESY)? Us?		

Goals

- Define (as much as possible) common analysis strategy for all modes
- Use common analysis tools (selection optimization, background evaluation, limits)
- Define control samples
- Goal is to publish with statistics recorded by summer 2022 (few hundreds fb⁻¹)
 - Guney's thesis ends september 2022
 - Possibly reanalyze Belle data too
