## On the $B$ -meson decay anomalies

vendredi 22 octobre 2021 09:00 (23 minutes)

In the Standard Model electroweak interactions are strictly lepton flavour universal.

In view of the emerging hints for the violation of lepton flavour universality in several  $B$ -meson decays, we conduct a model-independent study (effective field theory approach) of several well-motivated new physics scenarios.

Taking into account the most recent LHCb data, we provide updates to New Physics fits for numerous popular hypotheses.

We also consider a promising model of vector leptoquarks, which in addition to explaining the  $B$ -meson decay anomalies ( $R_{K^{(*)}}$  and  $R_{D^{(*)}}$ ) would have an extensive impact for numerous flavour observables.
