

Higgsino DM

lundi 30 mai 2022 16:10 (20 minutes)

An almost pure Higgsino of 1.1 TeV of mass is still a viable candidate for thermal DM within the MSSM. I will show a couple of collider signatures at the LHC that could be the smoking gun of such a LSP.

Orateur: DELGADO, Antonio (Notre Dame, IN)

Classification de Session: Parallel Session 1
