The goal of the AAA

The Advanced Accelerator Association Promoting Science & Technology (AAA) has been established to facilitate industry-government-academia collaboration, not only to obtain scientific findings in the field of particle physics but also to promote and seek various industrial applications of advanced accelerators and technologies derived from R&D on such accelerators. The AAA has designated the International Linear collider(ILC) as its model project; with advanced accelerator science and technologies the association aims to exploit the “intellectual horizon” of humanity on various research fields (such as space, elementary particles, material and environment), and strengthens international competitiveness in advanced science and technology. The goal of the AAA is to establish a new form of system to gain strategic cooperation from the multilateral collaborations among industry, academia and governments.
