

Bright stars in the Rubin Science Pipelines and other PSF-related fun

mercredi 24 novembre 2021 11:20 (20 minutes)

As a new addition to Rubin/LSST France, I will use this talk as an excuse to show the community some of what I have been working on, the last couple of years as a DM member, namely the handling of bright stars in the Rubin Science Pipelines. I will also talk about some of the work being carried out in the DESC working group on Point Spread Functions, for which I recently took over as co-convener.
