Options for an L-class microwave spectroscopy space mission

lundi 15 novembre 2021 15:30 (20 minutes)

Following on the submission of four coordinated white papers in answer to the ESA “Voyage 2050” consultation of the scientific community, CMB spectral distortions has been identified as one of possible science themes for a future L-class space mission to be launched in the 2035-2050 time frame. I will summarize the science cases, observation requirements, and possible mission profiles in this context.
