Commercial clouds

E-OSSR Aims and Objectives

- **Aim: ⇒ open-science products shared open science software and services based on FAIR principles**
- **Objectives:**
 - Facilitate and support continuous **development, deployment, exposure and preservation** of partners' software/tools/services
 - Foster **interoperability, software re-use and cross-fertilisation** between ESFRIs (e.g. simulation)
 - Offer an **open innovation environment for open standards** (e.g. workflows, data-formats), **common regulations** and **shared (novel) software** for multi-messenger & multi-probe data
- **All objectives follow:**
 - Paradigm of **enabling open science** – with **software as “first class citizen”**
 - a **community-based, inclusive** approach
 - the **FAIR principles** for open science resources – software and derivatives
 - **Federation** of available resources

OSSR entry categorization (draft)

- Scientific analysis software
 - fully installable software packages, e.g. [gammypy](#)
- Service environments
 - Projects for data and service providers, which offer e.g. a platform, GUI, or middleware for the computing environment (e.g. [ConCordia](#))
- dedicated scientific products (analysis, data)
 - **repositories of data or workflows:** projects that provide a certain class of data objects and serve as repository for this class of data, e.g. jupyter notebooks, or certain analysis results (if not provided in datalake or VO), e.g. [CME database](#)
 - **self-contained analysis environments:** repositories which provide full workflows and data (access), e.g. to reproduce a given analysis (e.g. [SKA data challenge](#), [HCG-16 study](#))

ESCAPE OSSR and Development Platform

– how to ease the publication and integration process?

- publishes source code
- Jupyter notebooks (my-binder integration)

- long term archived
- findable
- citable

- develop/maintain software
- tag a version(release)
- let the CI do the rest

- builds a container image

- publishes image

- registers image

- integrates into ESCAPE EOSC cell

- Separation of high-level / low-level workflows → steering needs manual intervention (for now)
- How to integrate ReCAST/[reana](#) → similar workflow

What is it?

The ESCAPE Open-source Scientific Software and Service Repository (OSSR) is a sustainable open-access repository to share scientific software and services to the science community and enable open science. It will house astro-particle-physics-related scientific software and services for data processing and analysis, as well as test data sets, user-support documentation, tutorials, presentations and training activities.

How to contribute to the ESCAPE OSSR?

You can onboard your project right now - [see here](#) how.

 The EOSC Symposium 2021 provided a key engagement opportunity for the EOSC community after the European Open Science Cloud finally entered its highly-anticipated implementation phase in 2021. Delivered online to just under 1,000 EOSC stakeholders from over 63 different countries, this was not only t

agnpy: Modelling Active Galactic Nuclei radiative processes with python.
 Cosimo Nigro; Julian Sitarek; Pawel Gliwiny; David Sanchez; Matthew Craig.
 agnpy is a python package focusing on the computation of the radiative processes of relativistic particles accelerated in the jets of Active Galactic Nuclei (AGN). It includes classes describing the galaxy components responsible for line and thermal emission and calculates the absorption due to gam

 Release of the ESCAPE Data Science Summer School 2021. The school is held as a continuation of the Asterics/Obelics summer schools that were organised in-person in Annecy, France in 2017, 2018 and 2019. The aim of the school is to provide theoretical and hands-on training on Data Science and Python

To be added: related projects (TSPs!) / collections

Short Demo

as Video at [the ESCAPE Cloud](#)

- Checklist for ESCAPE partners at <https://escape2020.pages.in2p3.fr/wp3/ossr-pages/>
- Process tracked via issues on [project platform](#)
- Necessary: Onboarding presentation & technical report → entry on the landing page
- Add metadata and register to ESCAPE community at Zenodo
- To be extended to external partners (TSOs) and streamlined
 - Add EOSC terms of use

Start onboarding to OSSR

Please fill this short form, we will contact you asap.

Tags: OSSR Onboarding, Template	

Description Quote

How to use the template

Adjust the issue

- **Subject** should have your software or project name in it, keeping "Onboarding"
- **Assignee** will be the OSSR maintainer assigned to your onboarding
- **Tags** should include your ESFRI
- **Documentation** will link to your tech report in Indico
- **Meeting contribution** will point to the Indico contribution containing slides and video recording of your onboarding talk
- The issue should link to an issue describing the software itself.

Completing the checklist

- Schedule your presentation to the FO1 meeting following [this wiki](#)
- Give the onboarding presentation and link the Indico entry of the onboarding under "Meeting contribution"
- Add the relevant metadata to your repository
- Register to Zenodo

Checklist

- Onboarding talk scheduled
- Onboarding presentation given
- Tech report provided

Onboarding Procedure Checklist

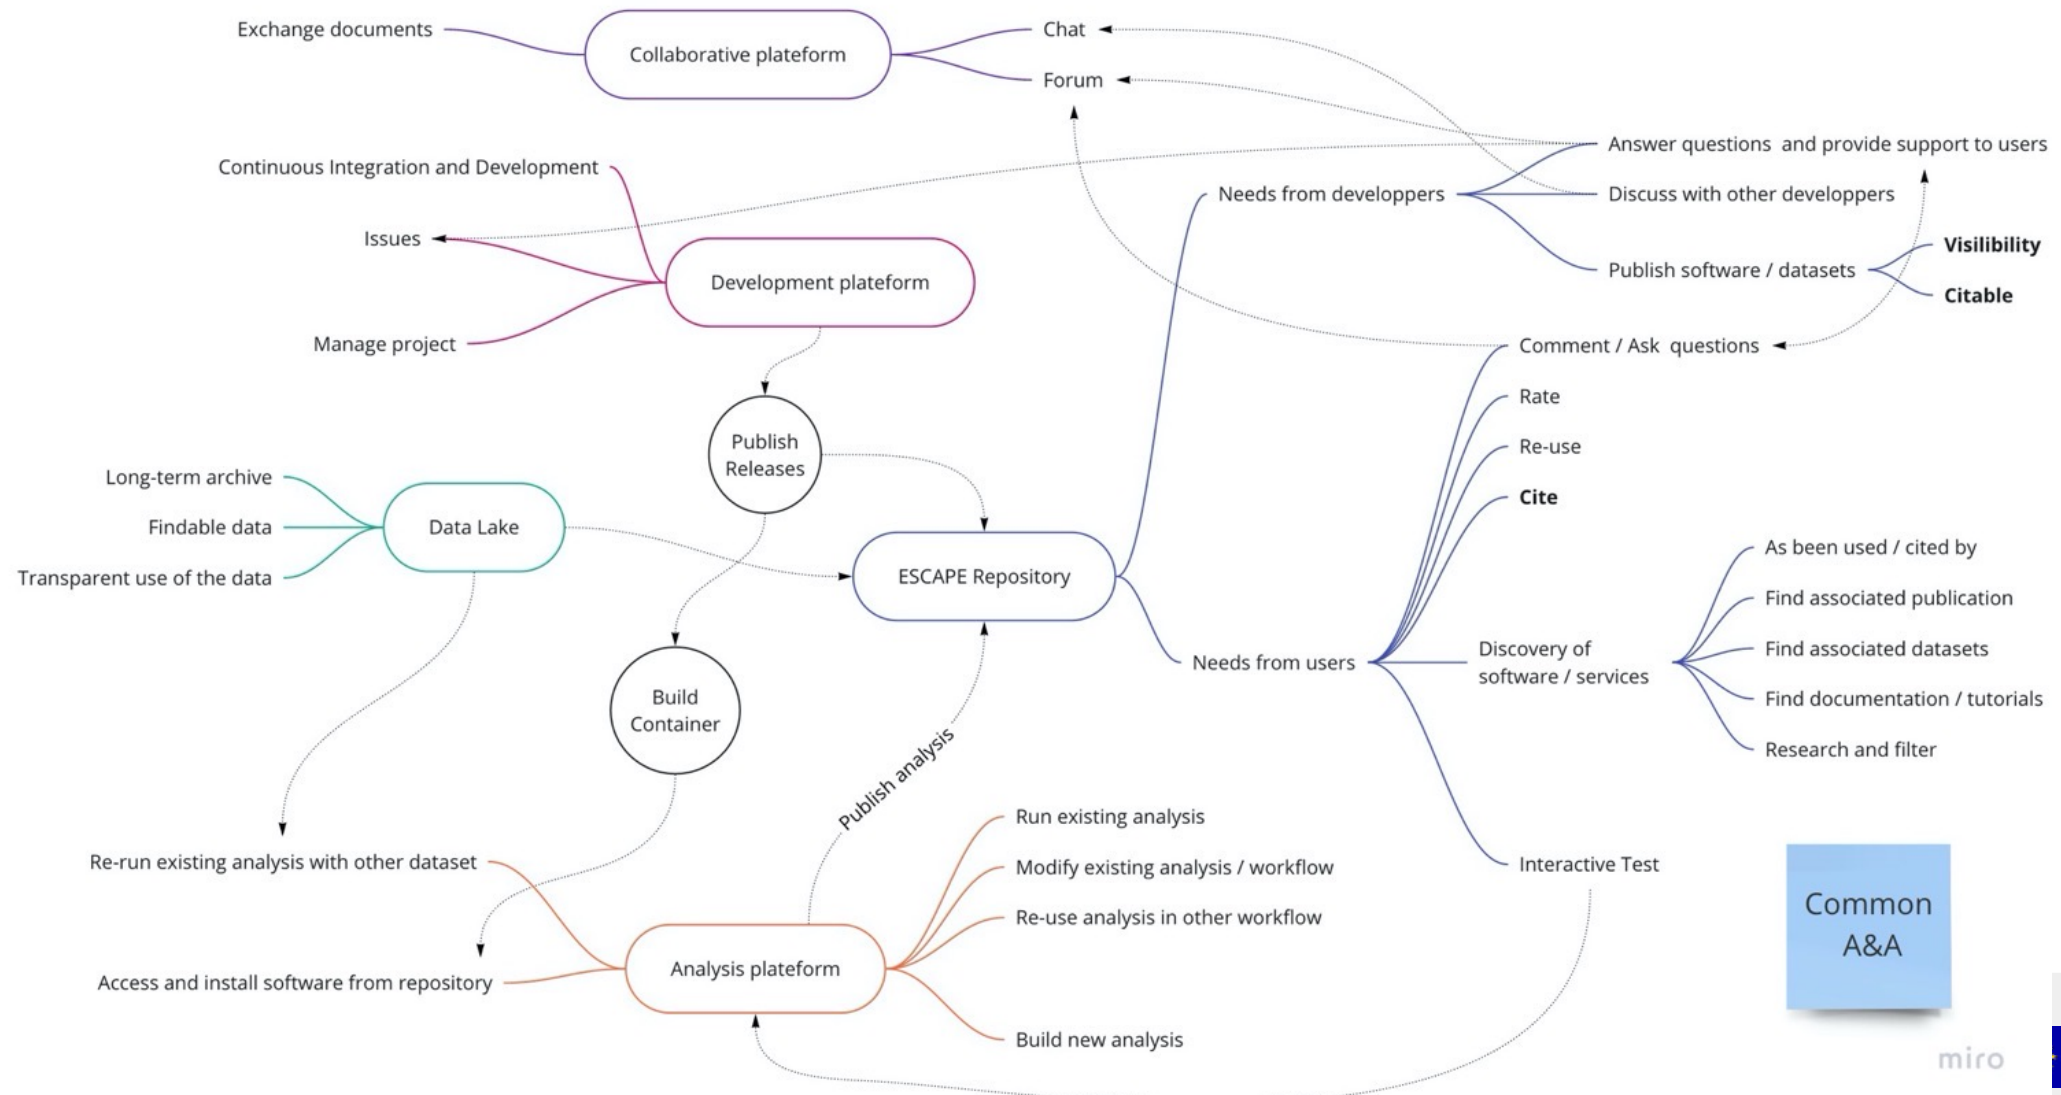

- Sign User Agreement
(We don't have a formal User Agreement yet. We currently assume "conduct implying an intent" / "implied contract")
- Request **an issue** in the [project platform](#) to start the onboarding process by filling this [registration form](#), or contacting a repository maintainer.
- A short onboarding presentation should be held during an FG1 call using [this template](#), an example can be found in [this talk](#). Please book your date in [this poll](#).
- A technical report should be filed using [this template](#), an example can be found at [this tech report](#).
