

Meeting@OHP

8-10 November, 2021

Motivation 1/2

The launch of SVOM is approaching (see the presentation of François and Bertrand) and even if a little delay is expected, the SVOM follow-up must be ready for mid-2023 at the latest.

We propose then to have a very first meeting dedicated to the SVOM follow-up:

- Status on COLIBRI and preparation of its scientific exploitation.
- Implementation of the SVOM follow-up by the other telescopes.
- Define the SVOM VOEvent format.
- Test and training of the SVOM alert system and its interaction with the follow-up telescopes.

Motivation 2/2

The ultimate goal: arriving at the meeting of Les Houches (May 2022) in such a way that the ground segment and its follow-up system is partially validated.

It is then important to see this meeting as a real working meeting:

- Please feel free to intervene or make suggestions in the agenda.

➡ And don't forget we are here to have fun getting together...

Main points to address during the meeting

A non-exhaustive list:

- Organization of the SVOM follow-up concerning the GRBs: access to the data, list of the partners, nature of the agreement, interface with them, global efficiency, etc.
- What about the ToO follow-up?
- Test of the alert system in real conditions (BA Tools and co.).

Agenda

Technical aspects of the meeting

- A WIFI access is available for all (nominative).
- Coffee break available in front of the administration building.
- All meals are taken at the Maison Jean Perrin, except this evening.
- Gala event: Restaurant la Pastorale, Reillanne (15 min from OHP, about 13 km).
