

# Real-time simulation of SVOM Core Program alert sequences for the training of the Burst Advocates

Damien Turpin (CNES/CEA) & Henri Louvin (CEA)

with the collaboration of

Kamshat Tazhenova (CEA), Nicolas Dagoneau (CEA), Stéphane Schanne (CEA), Tatyana Sadibekova (CEA), Chrystel Moreau (LAM), Arnaud Claret (CEA), Bertrand Cordier (CEA), Li-Ping Xin (NAOC), Mo Zhang (NAOC)

**SVOM workshop @OHP  
Nov, 9th 2021**

# Motivations and Goals

Our motivation for this training (Core Program only)

SVOM launch will be in 2023, we have one year to train the future Burst Advocates in **real conditions**.

“Real conditions” means

- **At the system level**

1. Simulate (ECLAIRs) alert sequences generated onboard in real-time
2. Transmit the alert informations in all the SVOM sub-systems (FSC & CSC DB, SDB, follow-up system) in real-time
3. generate simulated voevent alerts to be followed-up by our SVOM follow-system (SVOM facilities, external partners, MoU partners, etc.)
4. Build the first pieces of the future SVOM BA working environment

- **At the scientific level**

1. interpret the data displayed on the iFSC and CSC-BA tools : validation of the optical GRB afterglow candidates
2. take appropriate decision to perform further follow-up observations
3. Post our first GRB follow-up GCN Circular as the SVOM Collaboration !

# Outlines

**1. The SVOM alert simulator**

**2. How to follow-up the SVOM alerts ?**

**3. How to make my Burst Advocate job during this period ?**

1.  
The SVOM alert simulator

**SVOM workshop @OHP**  
**Nov, 8th 2021**

# From real Swift GRB to SVOM simulated GRBs

SVOM (2023 - )

Swift (2004 - Now)

## SVOM / Swift similarities

1. **Similar instruments onboard**, i.e. a soft gamma-ray trigger instrument associated with a 0.2-10 keV x-ray and an optical follow-up instruments
2. **Similar way to proceed onboard once a GRB is detected**, i.e. initialization of an automatic alert/follow-up sequence
3. **Similar GRB detection rate**, alert notices sent in real-time

Swift alert sequence (notices) sent for GRB 210818A

## Swift (alert notice sequence)

1. **SWIFT\_BAT\_QL\_POS( $t_0=0s$ ):** transient alert (Trigger time + sky position but no GRB confirmation yet)
2. **SWIFT\_BAT\_GRB\_POS\_ACK( $t_0=0s$ ):** GRB alert (Trigger time + sky position + GRB classification + SNR) **SWIFT\_BAT\_GRB\_POS\_NACK:** GRB not localized
3. **SWIFT\_FOM\_OBS ( $\Delta T=t_0+14-41s$ ):** figure-of-merit value for a Swift-BAT transient detection (Trigger time + sky position + GRB classification + ***FOM to trigger or not an automated follow-up sequence on-board***)
4. **SWIFT\_SC\_SLEW( $\Delta T=t_0+14-41s$ ):** response back from the Swift spacecraft to a Slew\_request (Trigger time + sky position + GRB classification + ***confirmation that the slew has been performed or not***)

# The typical scenario for the follow-up facilities

# The typical scenario for the follow-up facilities

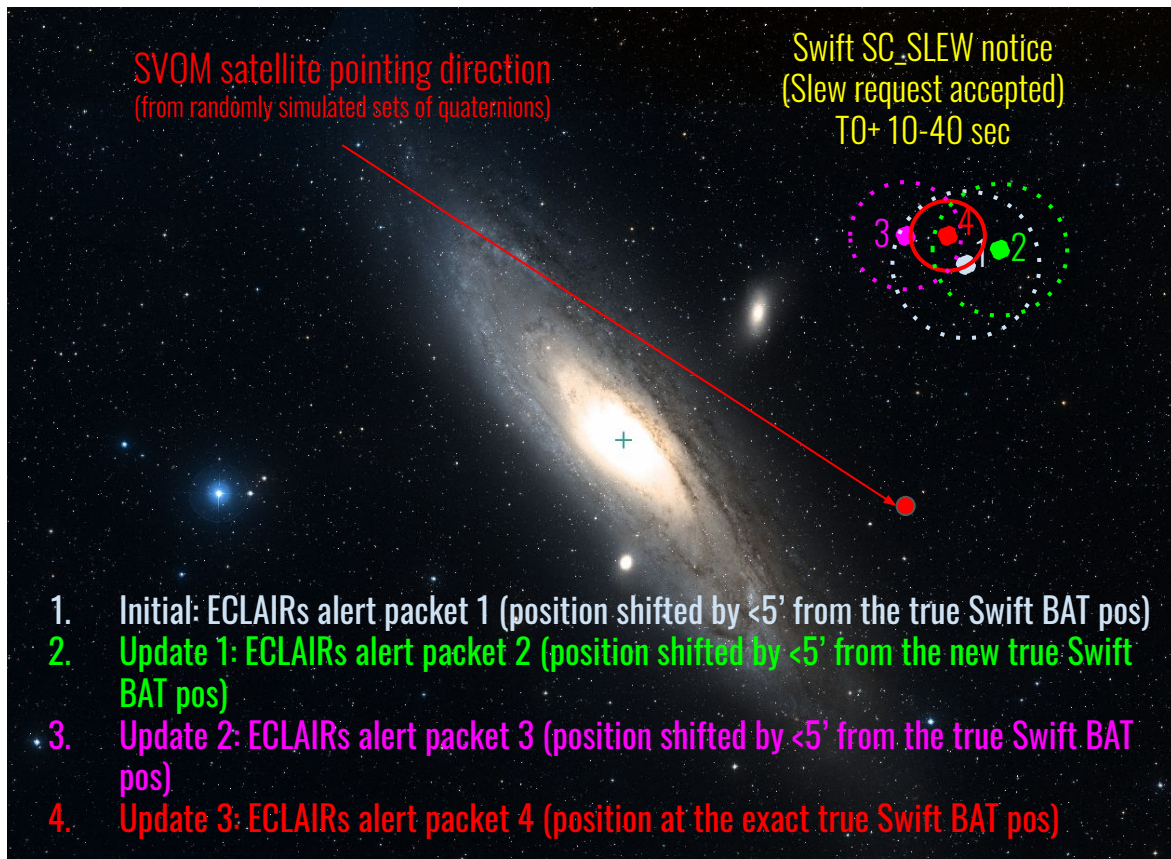

# The typical scenario for the follow-up facilities

# The typical scenario for the follow-up facilities

# Conclusions about the alert simulator

- The gcn-interceptor service is running 24h/7d at FSC to convert Swift GRB alerts into ECLAIRs alert packets in real-time
- The simulated VHF alerts are well encoded and processed at FSC
- The subsequent VHF products are produced in real-time and populate the SVOM/SDB
- An FSC alert broker is running 24h/7d to broadcast the SVOM alerts to the external world

A detailed 3D rendering of the SVOM (Swift Variability Monitor) satellite in orbit above Earth. The satellite is gold-colored with two large solar panel arrays extended. The Earth's horizon and atmosphere are visible in the background against a starry space.

## 2. How to follow-up the SVOM alerts ?

**SVOM workshop @OHP

# Step 3 : Perform follow-up observations

The IRiS robotic telescope @OHP

Follow-up images put in a repo accessible by SVOM for performing the transient detection analysis

# Step 4 : Create SVOM scientific products from the image analysis

## Step 4 : Create SVOM scientific products from the image analysis

*There is no way for now to efficiently display the obs. results of the external follow-up telescopes*

*Opened question : Should we develop it to populate the SVOM SDB or is it too complicated ?*

Transie

pro

3.

How to make my Burst Advocate job during that period?

**SVOM workshop @OHP  
Nov, 8th 2021**

# The current BA environment in SVOM

## The BA training WIKI (redmine) D. Turpin

- Store the main documentations and presentations
- **BA working procedure**
- Template for BA report in the Wiki
- Template for GCN Circulars (TBD)
- General statistics about the follow-up campaign

## The iFSC-tools (FSC) C. Moreau

- **Display VHF data products (alert & follow-up)**
- **Manage the French shifts**
- Display the FR/CN BA shift calendar
- Display the COLIBRI data and provide tools to identify the GRB afterglow
- **Display follow-up data from external partners?**

## The CSC BA-tools (CSC) L. Xin

- Display X-band data products (alert & follow-up)
- **Manage the Chinese shifts**
- **Display the SVOM/CN follow-up data**
- **Provide tools to identify the GRB afterglows**

- Regular BA meetings
- Live discussions for any kind of concern related to the BA activities

# Keep in mind the key opened questions

## **To be clarified during the first half of the BA training period**

1. What should be the official content of the different SVOM VOEvents notices extracted from the VHF packet analysis?
2. Should we develop a dedicated pipeline to analyze the opt. images from external partners and produce sci. products to be stored in the SVOM SDBs ?
3. Where do we display the external partners sci. products ?
