

# Some conclusions

- So nice to have a physical meeting after such a long period!
- Some actions:
  - Sending an email with all the slides and the elements to access the follow-up Redmine and the tchat.
  - Continuing building a community on the follow-up:
    - Continuing to access to the open-time facilities: ORP proposal(s), US telescopes, Stargate, ...
    - Continuing to identify strategic « private » facilities: Tasmania, ...
    - Defining/validating the interfaces.
    - Making the same exercise with the Chinese colleagues.
  - Triggering a discussion on TOM from ORP.

# Next meeting

- Our goal: be ready for Les Houches (May 2022).
- Propose to have a working meeting, still at OHP, in March 2022, to validate in real condition a more integrated system:
  - Validation with the SDB, IFSCTools, Astro-Colibri, data reduction, etc.
  - Telescopes: IRiS, but also TAROT and COLIBRI (should be possible at that time)
  - Validation of the link to Fink.
- and to continue to work on the follow-up:
  - Preliminary responses for the ToOs.
  - Etc.
